Priority Setting and Resource Allocations

The planning council uses needs assessment data as well as data from a number of other sources to set priorities and allocate resources. This means the members decide which services are most important to people living with HIV in the EMA or TGA (priority setting) and then agree on which service categories to fund and how much funding to provide (resource allocations). In setting priorities, the planning council should consider what service categories are needed to provide a comprehensive system of care for people living with HIV in the EMA or TGA, without regard to who funds those services.

The planning council must prioritize only service categories that are included in the RWHAP legislation as core medical services or support services. These are the same service categories that can be funded by RWHAP Part B and RWHAP Part C programs. (See page 22 for a list of service categories eligible for RWHAP Part A funding.)

After it sets priorities, the planning council must allocate resources, which means it decides how much RWHAP Part A funding will be used for each of these service priorities. For example, the planning council decides how much funding should go for outpatient/ambulatory health services, mental health services, etc. In allocating resources, planning councils need to focus on the legislative requirement that at least 75 percent of funds must go to cover medical services and not more than 25 percent to support services, unless the EMA or TGA has obtained a waiver of this requirement. Support services must contribute to positive medical outcomes for clients. Typically, the planning council makes resource allocations using three scenarios that assume unchanged, increased, and decreased funding in the coming program year.

The planning council makes decisions about priorities and resource allocations based on many factors, including:

- Needs assessment findings
- Information about the most successful and economical ways of providing services
- Actual service cost and utilization data (provided by the recipient)
- Priorities of people living with HIV who will use services
- Use of RWHAP Part A funds to work well with other services like HIV prevention and substance abuse treatment services, and within the changing healthcare landscape
- The amount of funds provided by other sources like Medicaid, Medicare, state and local government, and private funders since RWHAP is the "payor of last resort" and should not pay for services that can be provided with other funding.

Service Priority Setting Worksheet 2017

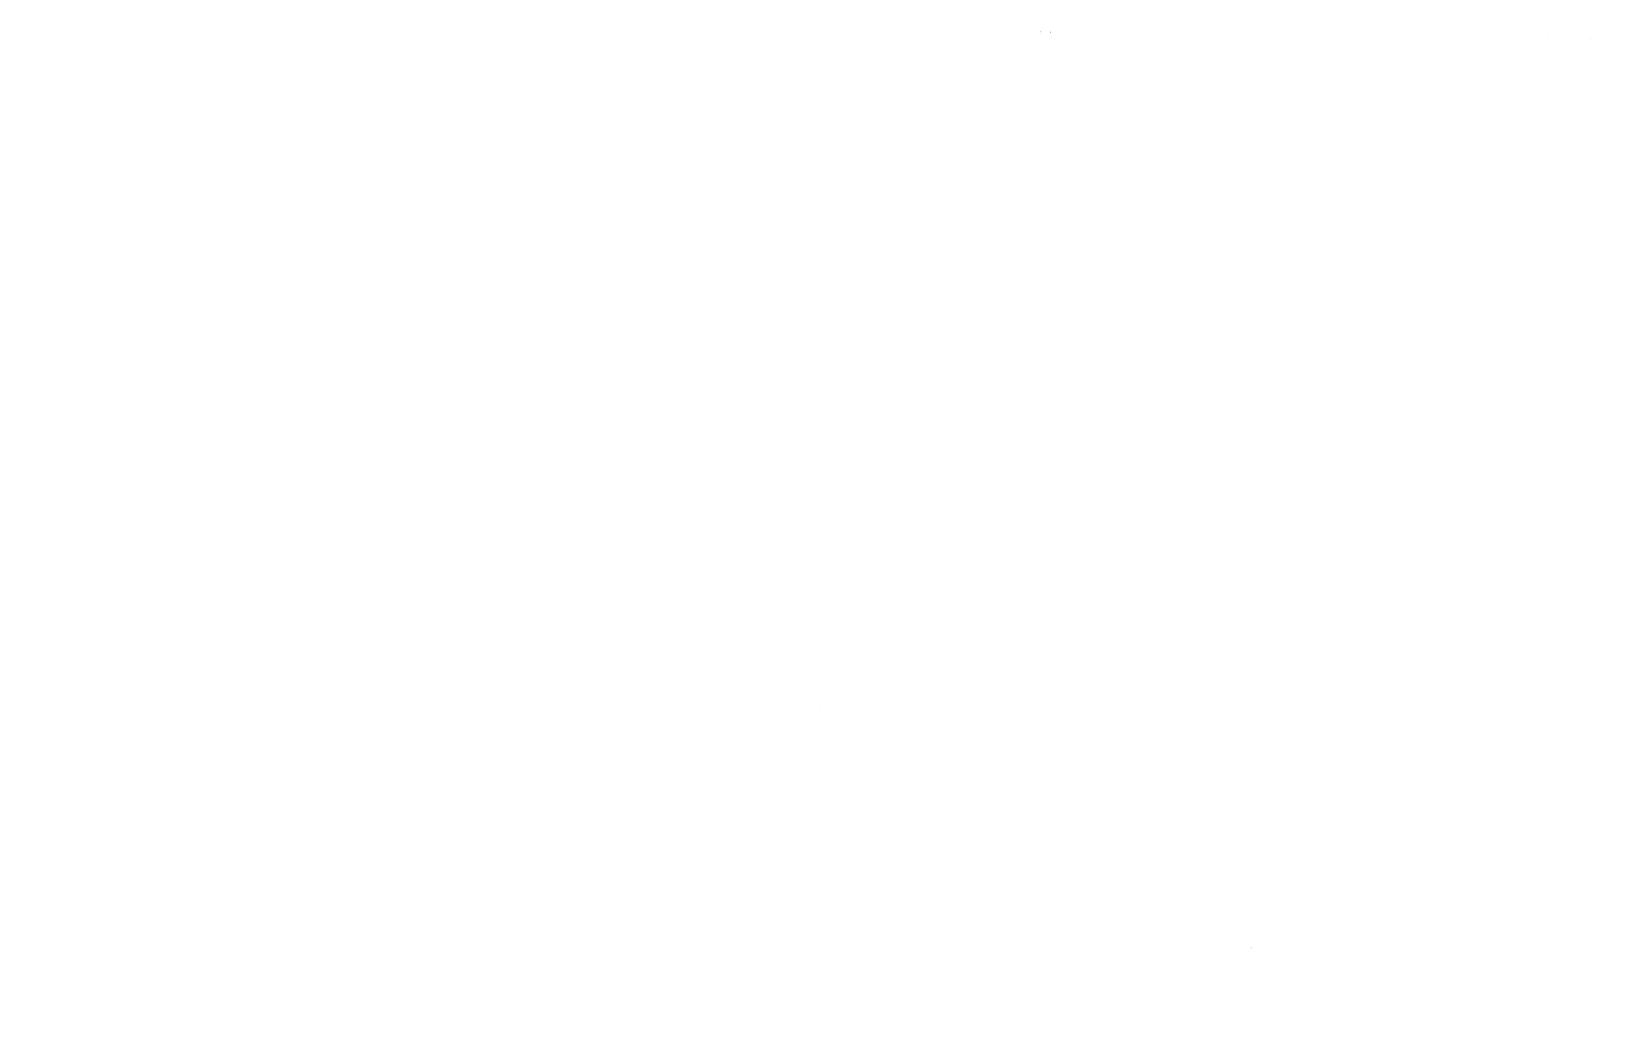

Each service category will be scored according to these factors and scales using the sources noted for each factor. The group will score the factors for each service together, reaching consensus whenever possible. If disagreement occurs, then the majority of the group will decide the score for the factor.

Factor	Definition	Scale
Consumer Survey (25%)	Percentage of consumers who said they used or "needed but didn't get" in the last 12 months, in the 2017 Consumer Survey.	1- 0-15% 3- 16-30% 5-31-45% 8- >46%
Care Continuum (20%)	Ryan White services help consumers in diagnosis, linkage and retention to care, as well as treatment adherence. This factor quantifies the impact of these service categories along the care continuum, the more points/categories along the cascade the RW service supports, the higher the score.	1- no category 3- 1-2 categories 5- 3 categories 8- 4 categories
Unmet Need (30%)	Unmet need is measured through consumer report of needing a service and not receiving it. Two sources are used: Medical Monitoring Project and Client Services Unit Intake. The higher percentage between the two data sources is the one used to score the factor.	1 – no mention 3 – 1-20% 5 – 21-50% 8 – >50%
Essential Health Benefit (10%)	The Affordable Care Act ensures health plans offered in the individual and small group markets, offer a comprehensive package of items and services, known as essential health benefits. Essential health benefits must include items and services within at least the following 10 categories: ambulatory patient services; emergency services; hospitalization; maternity and newborn care; mental health and substance use disorder services, including behavioral health treatment; prescription drugs; rehabilitative and habilitative services and devices; laboratory services; preventive and wellness services and chronic disease management; and pediatric services, including oral and vision care.	1 – Yes 5 – Yes, but may not meet PLWHA needs or HIV care guidelines 8 - No
Community Conscience (15%)	This factor seeks to quantify community opinion/expertise of delivering and receiving HIV services in relationship to emergent needs and issues, vulnerable populations, community knowledge, and service utilization data.	1- neutral, community need is addressed/represented by other factors 5- some concern that community need is not represented by other factors 8- great concern that community need is under-represented by
