Figure 1. Racial and Ethnic Composition of Philadelphia County, 2015 (ACS 5yr S1701)

Census tracts are population density based, the larger the population the smaller the geographic area. Generally, the population within a census tract is from 2,500 to 8,000. Based on the United States Census Bureau census tracts are defined as small, relatively permanent statistical subdivisions of a county. Uniquely numbered in each county with a numeric code and have on average about 4,000 inhabitants. The map above is broken out by census tracts which are outlined in grey. Figure 1. represents a dot density map of the racial and ethnic population distribution by census tract. Each dot is equal to five individuals. The dots shown in yellow denote the White population, the blue or turquoise colored dots are for the Black population, red dots represent the Asian population and the green dots are for the Hispanic population. Zip code areas have also been included to provide additional geographic context. Native American and Alaska Natives have not been included in this map because their representative population is relatively small as compared to the other racial and ethnic groups and would be lost in this format. Native American and Alaska Natives are shown in Figure 14. on page 19.

The figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in subject table S1701. If the total number within a cell/tract was too small to generate an estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small "0" may have been substituted to render the database readable by ArcMap.

Figure 2. Percentage of White Alone Population who Reside in Philadelphia County by Census Tract, 2015 (ACS 5yr S1701)

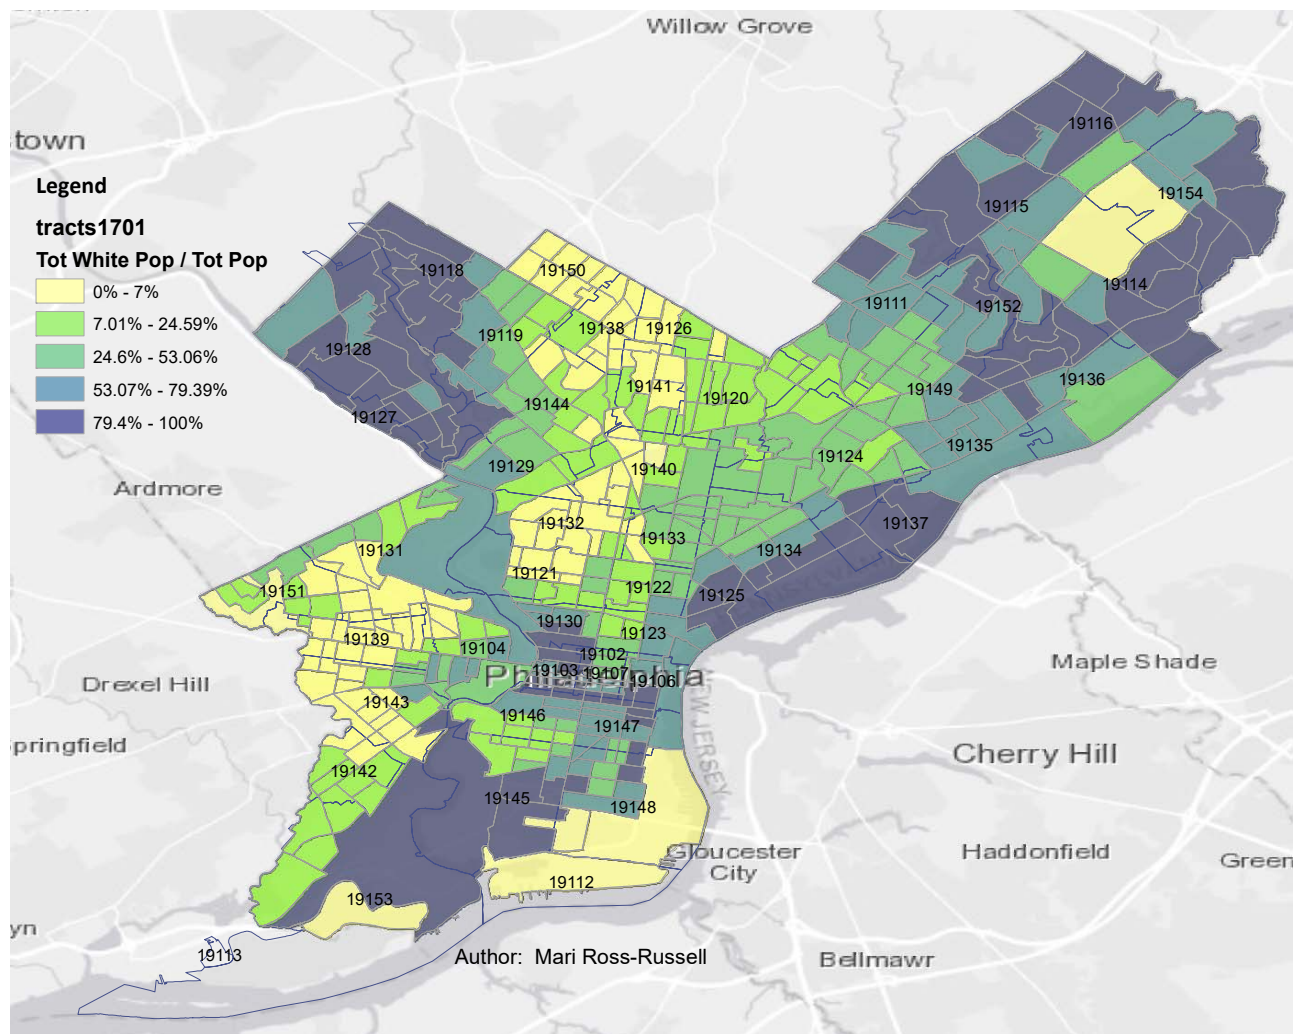

Figure 2. demonstrates the estimated total White population residing in Philadelphia County at year end in 2015. The percentage was obtained by dividing the White population by the total estimated population. The colors start with yellow the lowest percentage (lightest color) and progress through green and then on to blue (the darkest color) which represents the highest percentage. The five groupings are quintile based, meaning that the total number of census tracts are equally divided among the groups, there were a total of 384 census tracts in Philadelphia County and each group has either 76 or 77 tracts. The lowest white population percentage is 0% to 7%, and 79.4% to 100% as the highest percentage grouping. The figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 3. Percentage of the White Population alone, who reside in Philadelphia County at or below Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

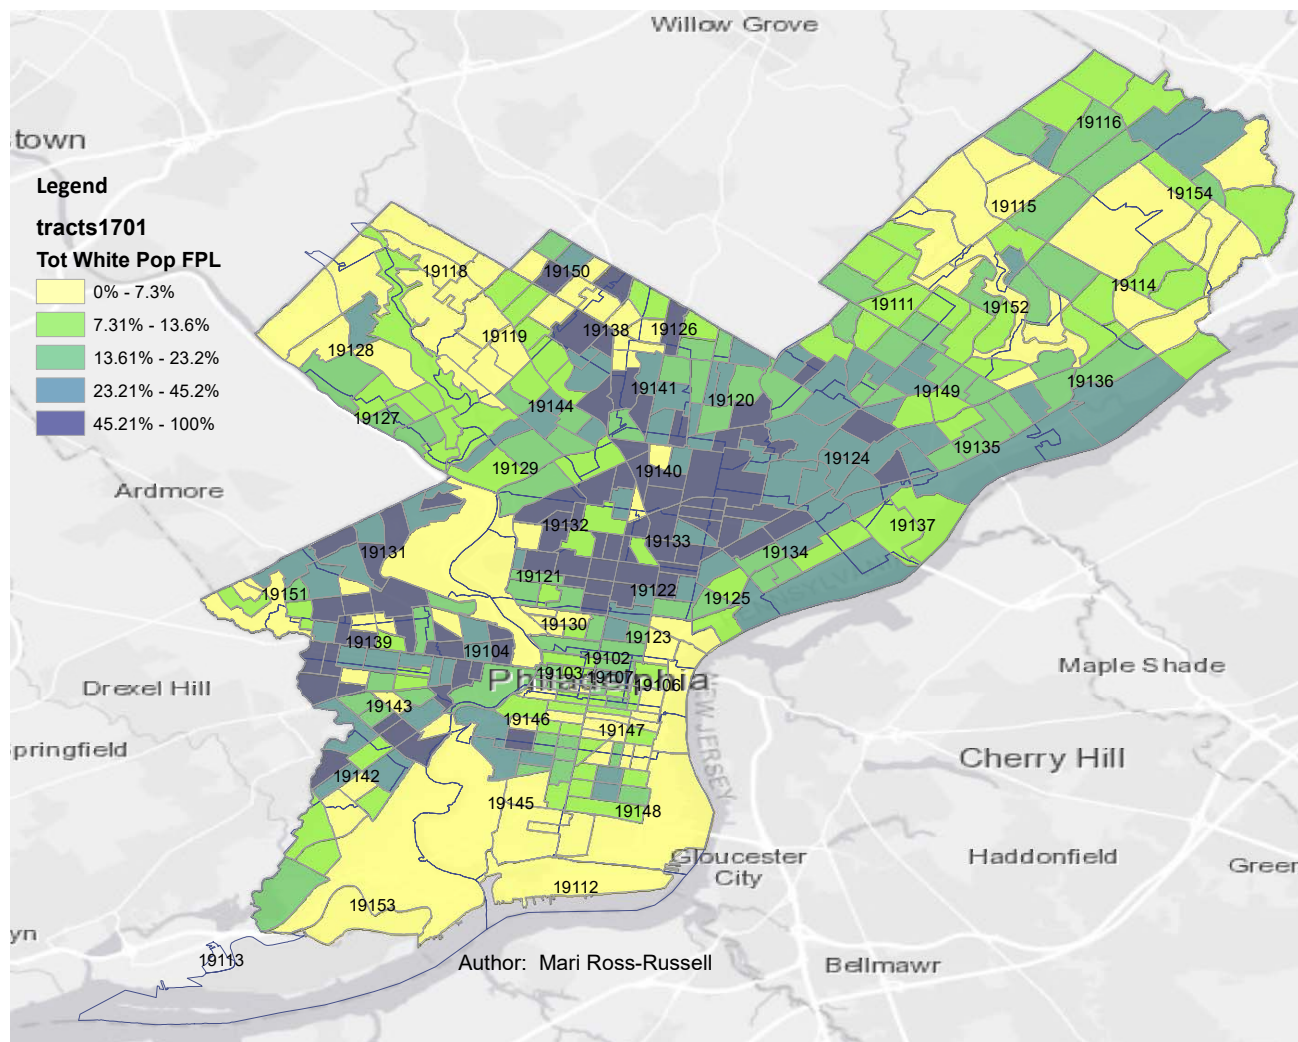

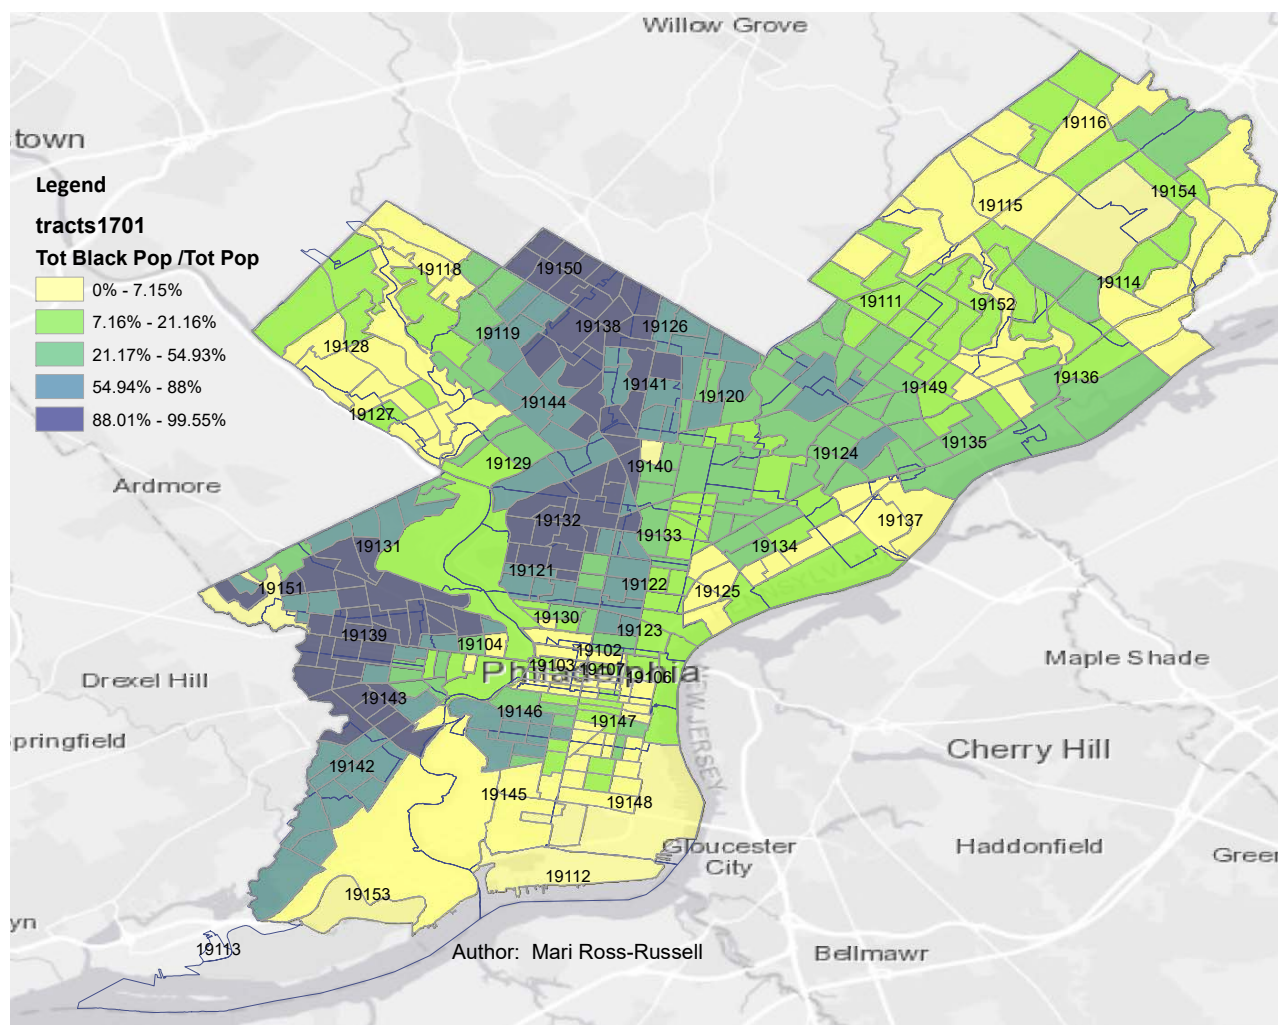

Figure 3. illustrates the estimated total White population residing in Philadelphia County within the total population at year end in 2015 at or below the federal poverty level (FPL). Census tracts are population density based, the larger the population the smaller the geographic area. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey and zip codes which are outlined in dark blue. The colors shown start with yellow the lowest percentage (lightest color) and progresses through green and then on to blue (the darkest color) which represents the highest percentage. The lowest white population percentage grouping at or below FPL is 0% to 7.3% and 45.21% to 100% as the highest percentage grouping. The five groupings are quintile based, meaning that the total number of census tracts are equally divided among the groups, by way of example, there are a total of 384 census tracts in Philadelphia county and each group would have 76 or 77 tracts. The figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 4. Percentage of Black Population Alone who reside in Philadelphia County, 2015 (ACS 5yr S1701)

The five groupings are quintile based, meaning that the total number of census tracts are equally divided among the groups, there are a total of 384 census tracts in Philadelphia county and each group would have 76 or 77 tracts. Figure 4. shows the estimated total Black population residing in Philadelphia County by census tract as of the end of 2015. The percentage was obtained by dividing the estimated Black population by the total estimated population. The colors start at yellow, the lowest percentage, with 0% to 7.15%. The highest percentage grouping shown in the darkest color and is 88.01% - 99.55%.

The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701. Census tracts are population density based, the larger the population the smaller the geographic area. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey and zip codes outlined in dark blue.

Figure 5. Percentage of Black Population Alone who Reside in Philadelphia County at or Below 100% Federal Poverty Level, 2015 (ACS 5yr S1701)

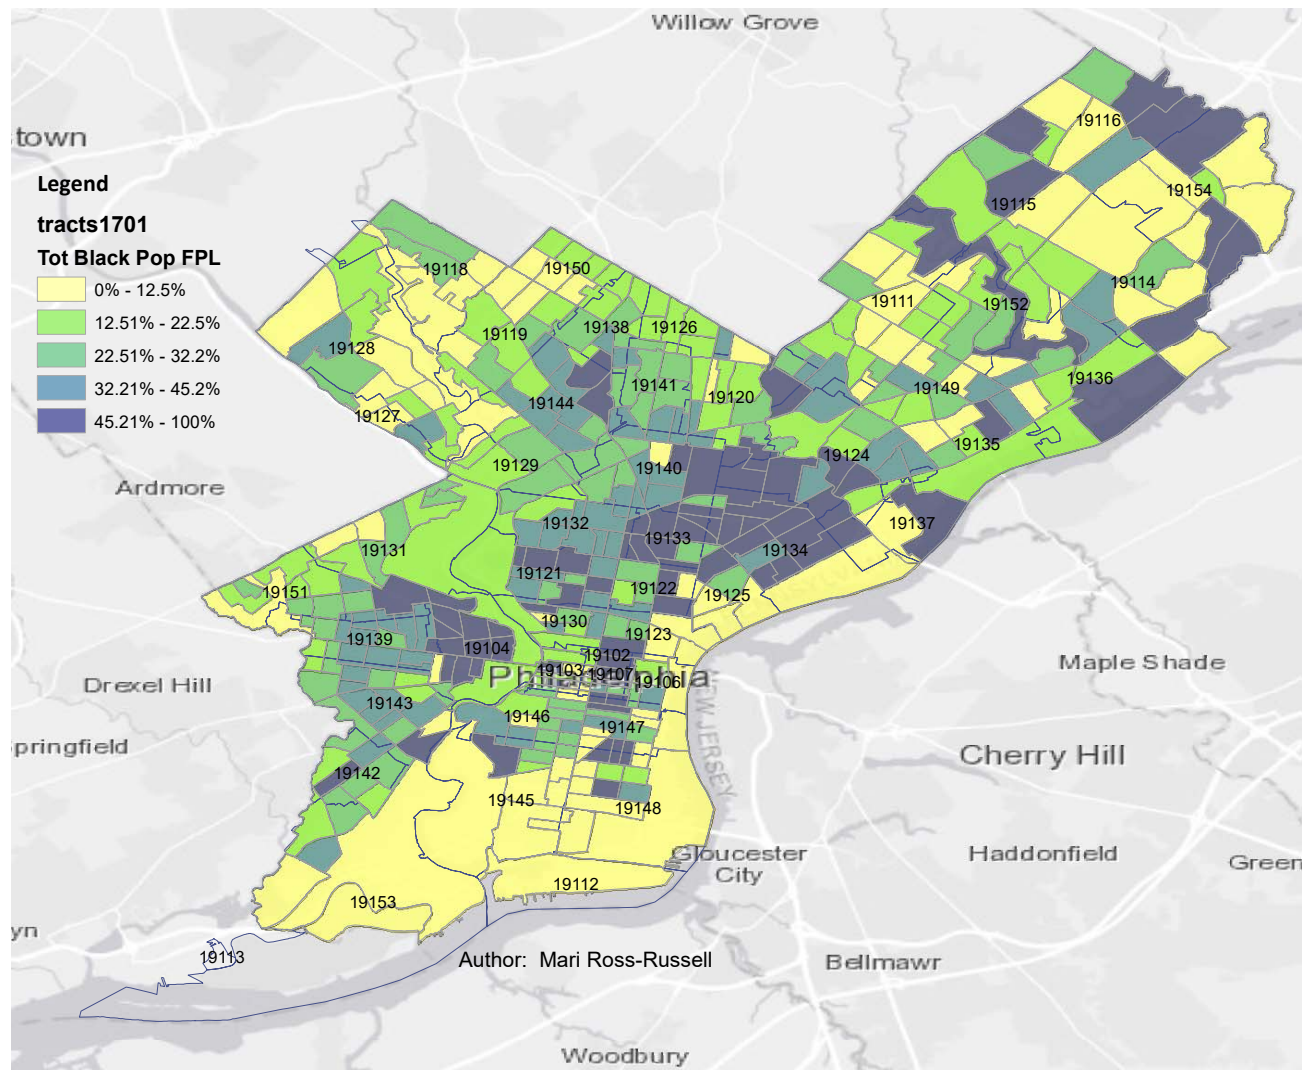

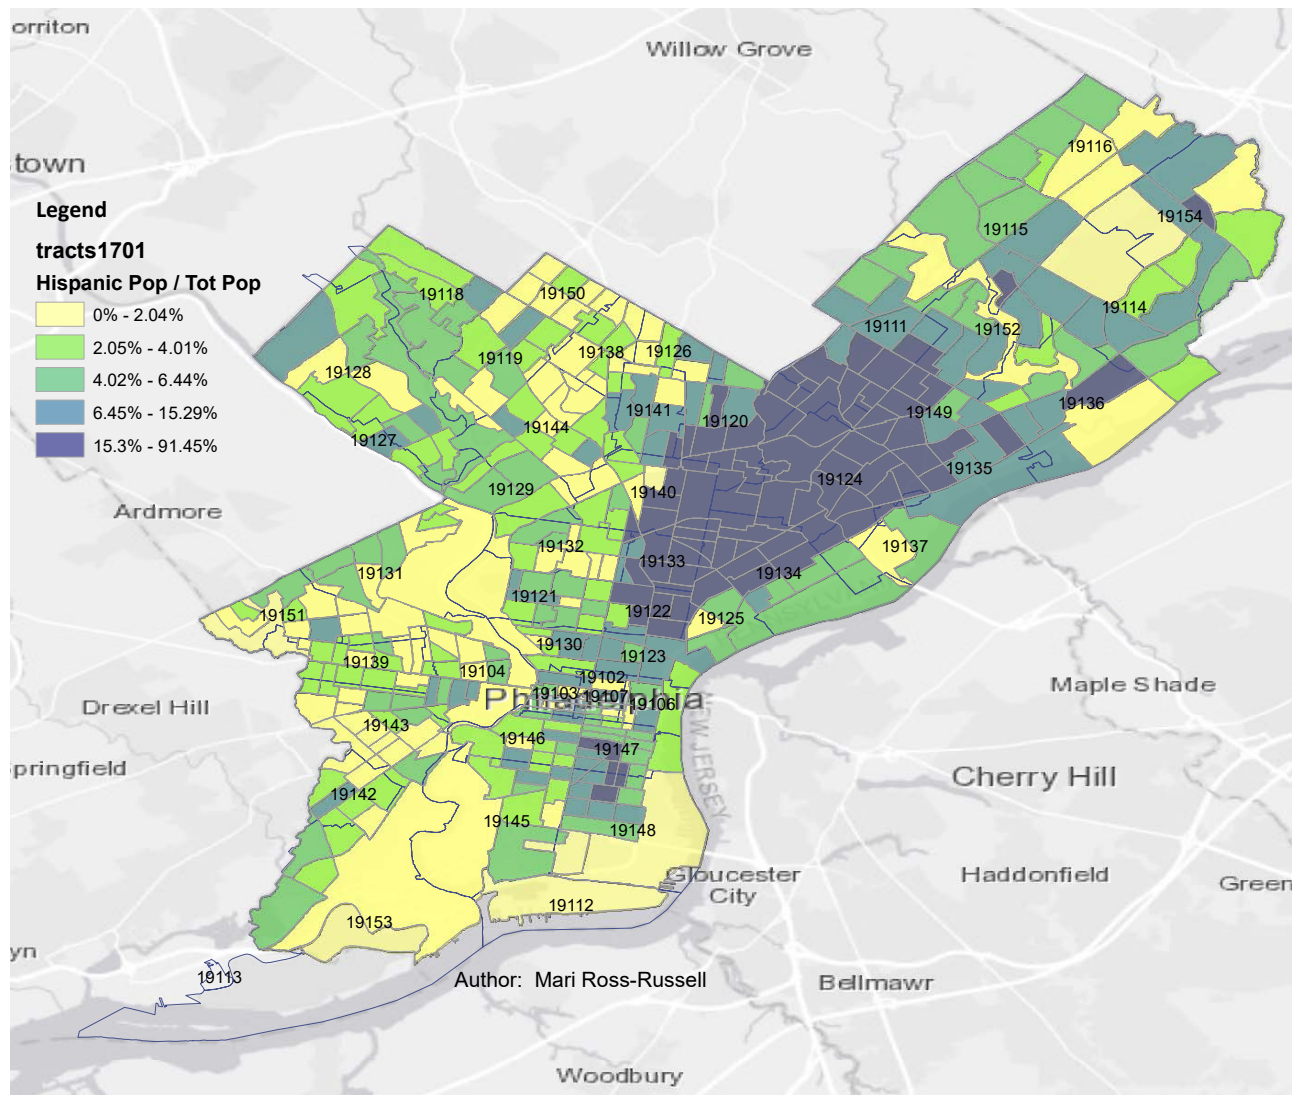

Figure 5. illustrates the estimated total Black population living in Philadelphia County within the total population at or below the federal poverty level (FPL) at year end in 2015. The colors start with yellow the lowest percentage (lightest color) and progresses through green and then on to blue (the darkest color) which represents the highest percentage. The smallest Black population percentage at or below FPL is 0% to 12.5%, with 12.51% to 22.5% second, 22.51% to 32.2% third, 32.21% to 45.2% fourth and finally 45.21% to 100% as the highest percentage grouping.

The five groupings are quintile based, meaning that the total number of census tracts are equally divided among the groups, by way of example, there are a total of 384 census tracts in Philadelphia county and each group would have 76 or 77 tracts. The figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 6. Percentage of the Hispanic Population Residing in Philadelphia County by Census Tract, 2015 (ACS S1701)

The information shown in Figure 6. illustrates the estimated total of the Hispanic population who lived in Philadelphia County at year end 2015. The percentage was obtained by dividing the Hispanic population by the total estimated population. The groups start with yellow representing the lowest percentage (lightest color) and progresses through green and then on to blue (the darkest color) which represents the highest percentage. The five groupings are quintile based, meaning that the total number of census tracts are equally distributed among the 384 census tracts in Philadelphia County. The lowest Hispanic population group shown is 0% to 2.04%, with 2.05% to 4.01% second, 4.02% to 6.44% third, followed by 6.45% to 15.29% and 15.3% to 91.45% as the highest percentage grouping.

The map in the figure was generated using ArcMap 10.5.1 and the data was taken from the five-year American Community Survey estimates in table S1701.

Figure 7. Percentage of the Hispanic Population Residing in Philadelphia County at or Below 100% Federal Poverty Level by Census Tract, 2015 (ACS S1701)

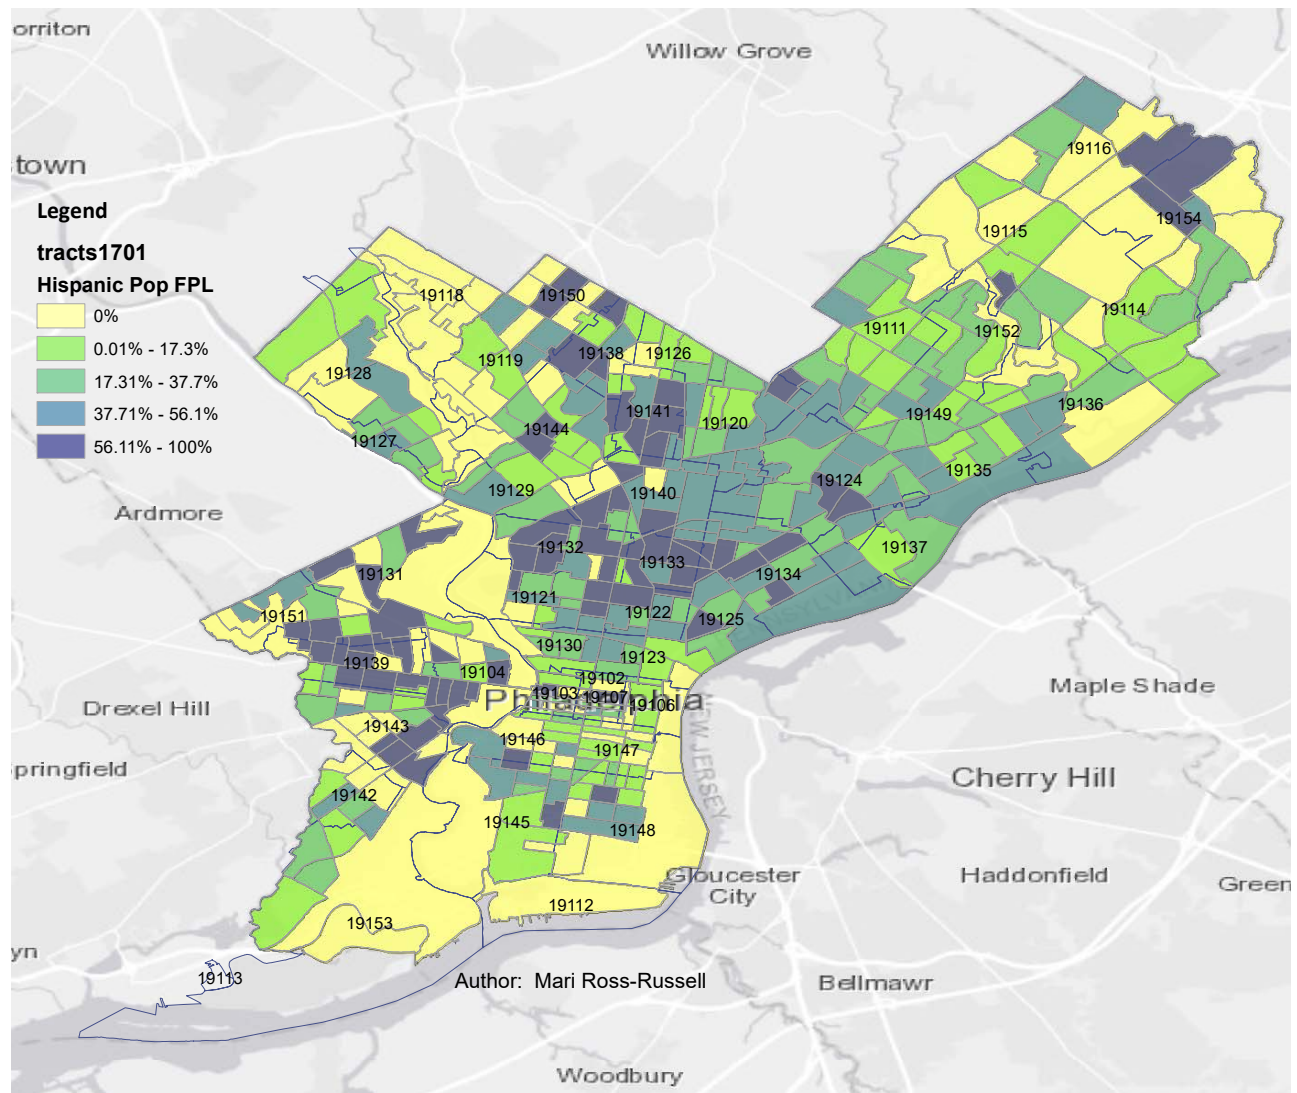

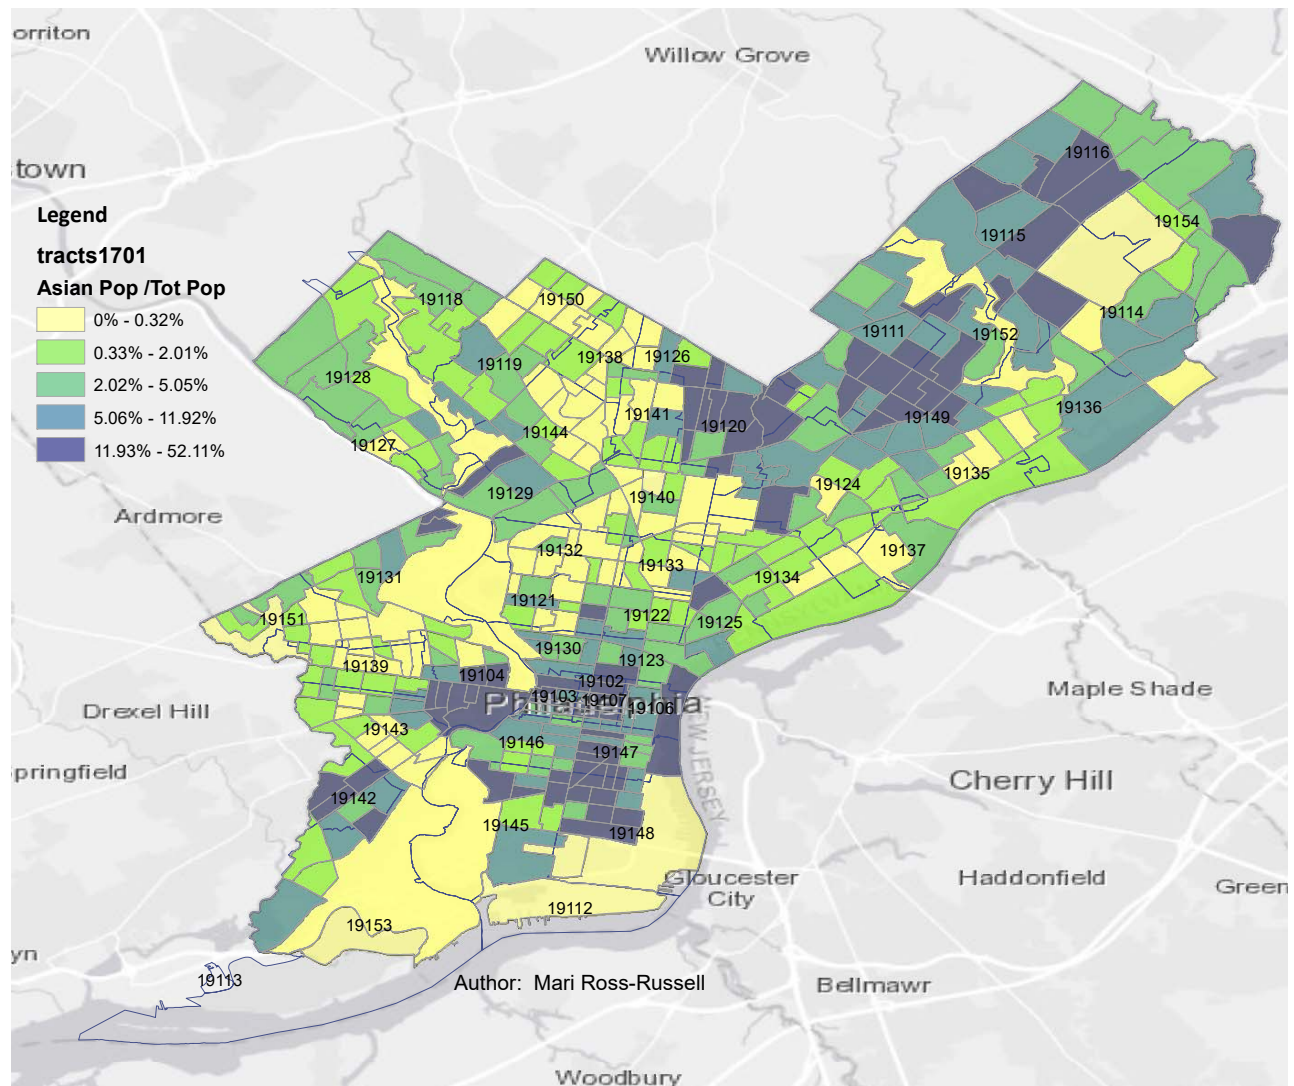

Figure 7. provides the estimated total Hispanic population residing in Philadelphia County within the total population by census tract at the end of year, 2015, at or below the federal poverty level (FPL). The five groupings are quintile based so that the 384 census tracts are divided equally among the groups shown. The smallest or lowest percentage (lightest color) starts with yellow at 0%. The next lowest population percentage for Hispanic at or below FPL is 0.01% to 17.3% with 17.31% to 37.7% following, 37.71% to 56.1% and 56.11 to 100%, fourth and fifth respectively. Census tracts are population density based, the larger the population the smaller the geographic area. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey and zip codes which are outlined in dark blue.

The figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in subject table S1701.

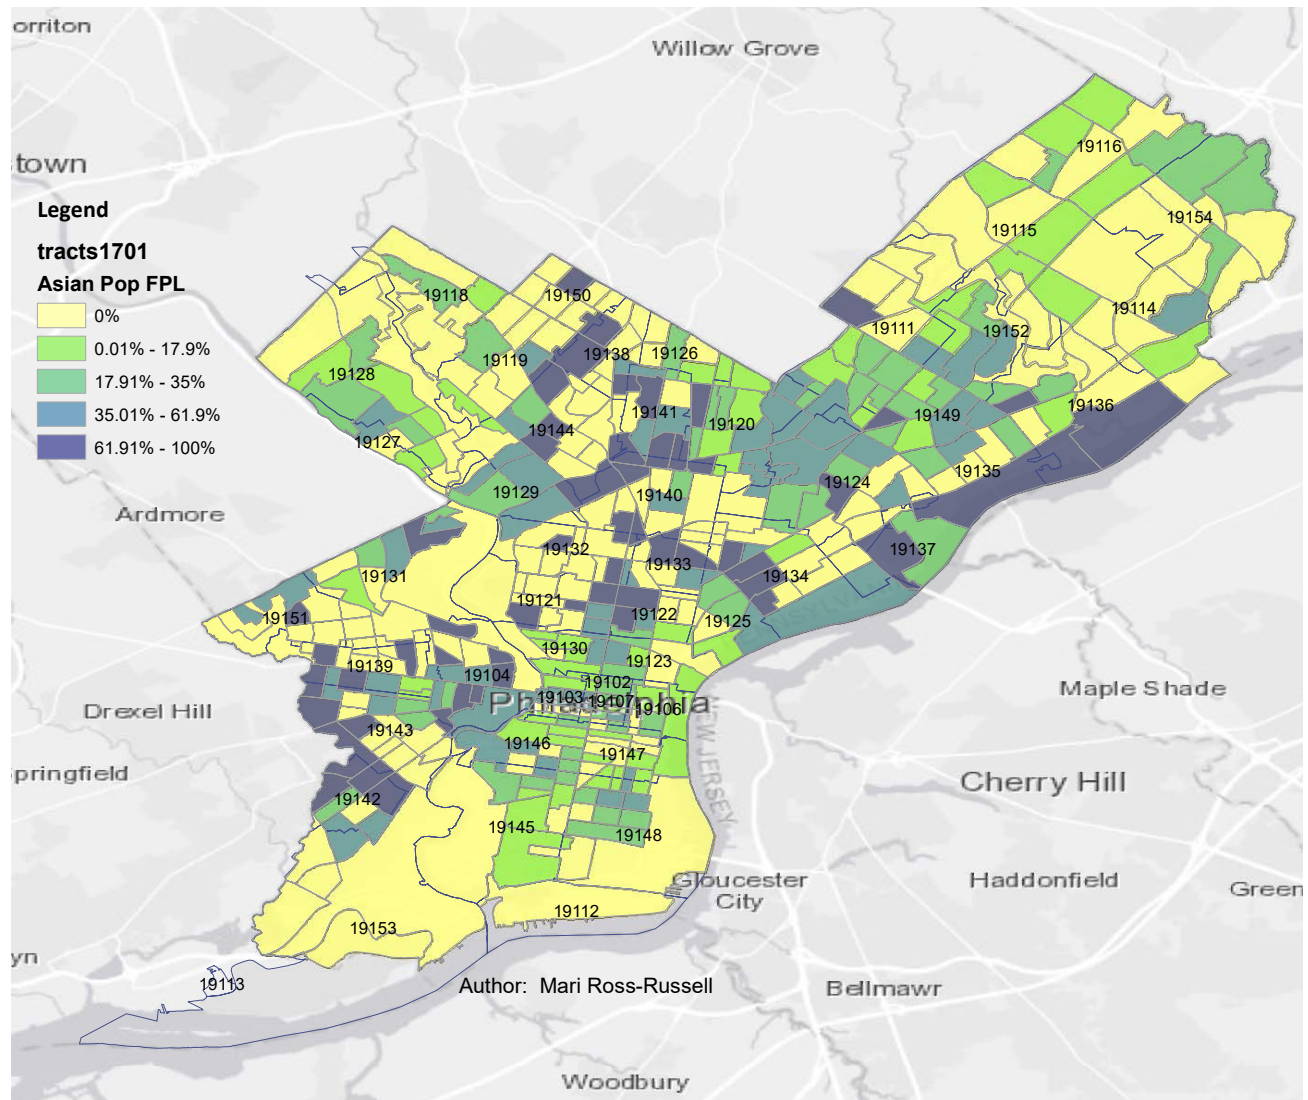

Figure 8. Percentage of the Asian Population Alone Residing in Philadelphia County by Census Tract, 2015 (ACS S1701)

The Asian population is widely dispersed throughout Philadelphia County as demonstrated in Figure 8. The smallest group based on a five-category estimated population breakout is 0% to 0.32%. This is followed by 0.33% to 2.01%, next is 2.02% to 5.05%. The fourth category is 5.06% to 11.92% of the total population within Philadelphia County. The last group represents 11.93% to 52.11% of the total estimated population within a census tract as of the end of 2015.

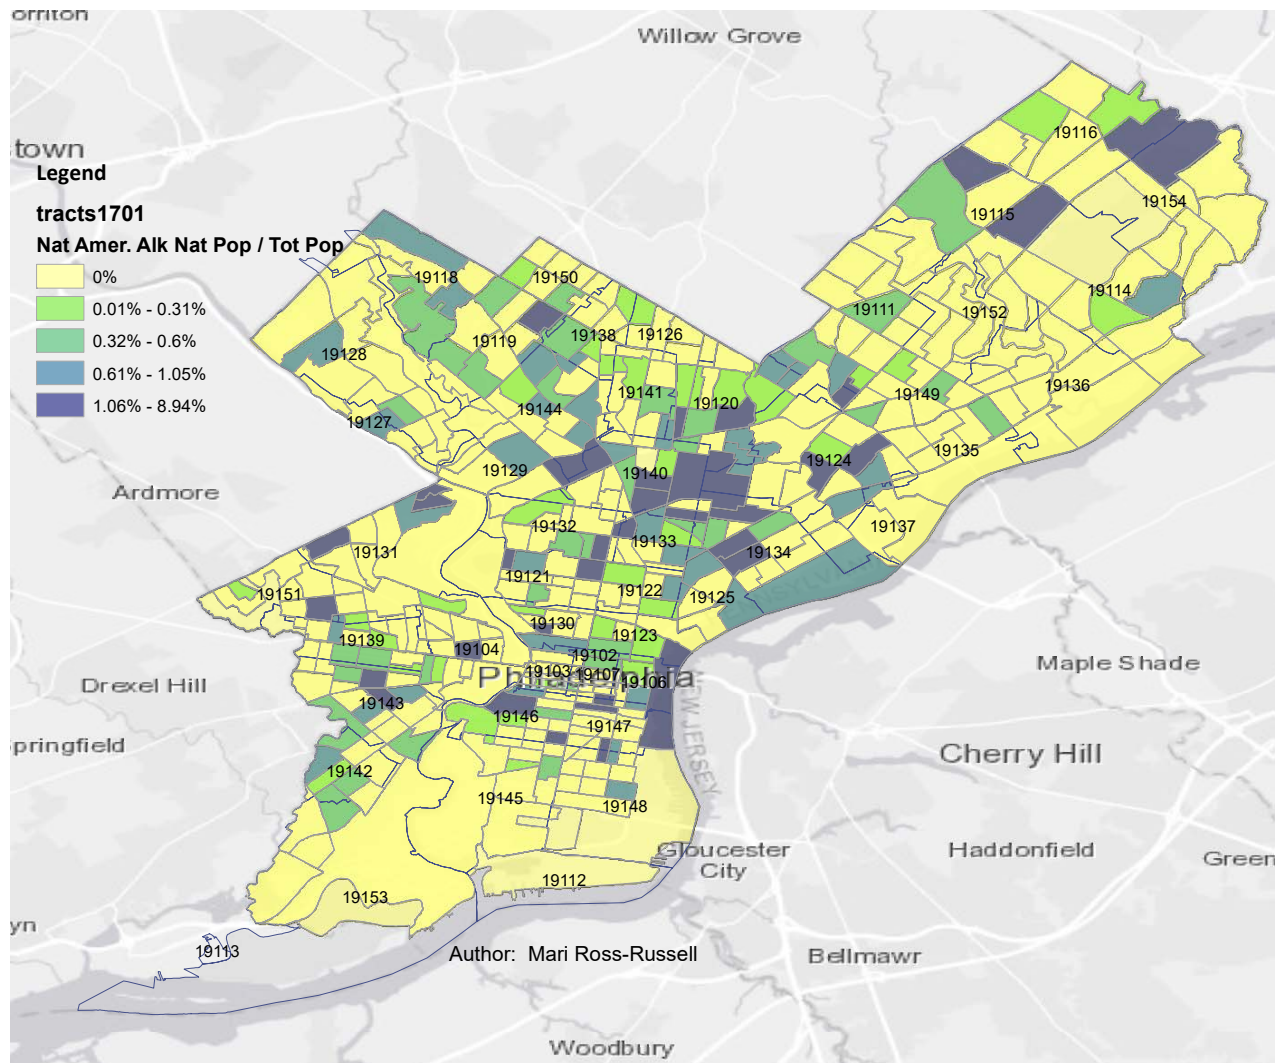

The five groupings are quintile based, meaning that the total number of census tracts are equally divided among the groups, there are a total of 384 census tracts in Philadelphia county and each group would have 76 or 77 tracts. Census tracts are population density based. The greater the population density or the more people living in an area the smaller the geographic area or census tract shown. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 9. Percentage of the Asian Alone Population Residing in Philadelphia County at or Below 100% Federal Poverty Level by Census Tract, 2015 (ACS S1701)

Of the 384 census tracts in Philadelphia County, about 60% are estimated to have an Asian Population. This has resulted in several census tracts with a 0% as evidenced by the yellow or light-colored tracts shown above in Figure 9. at the end of 2015. The four remaining percentage groupings are as follows: .01 to 17.9%, 17.91% to 35%, 35.01% to 61.9% and 61.91% to 100%. It should be noted that if there are only 5 individuals that fall within a racial or ethnic group and all 5 are at or below FPL then the census tract will be 100% for that racial or ethnic population. The five groupings are quintile based. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

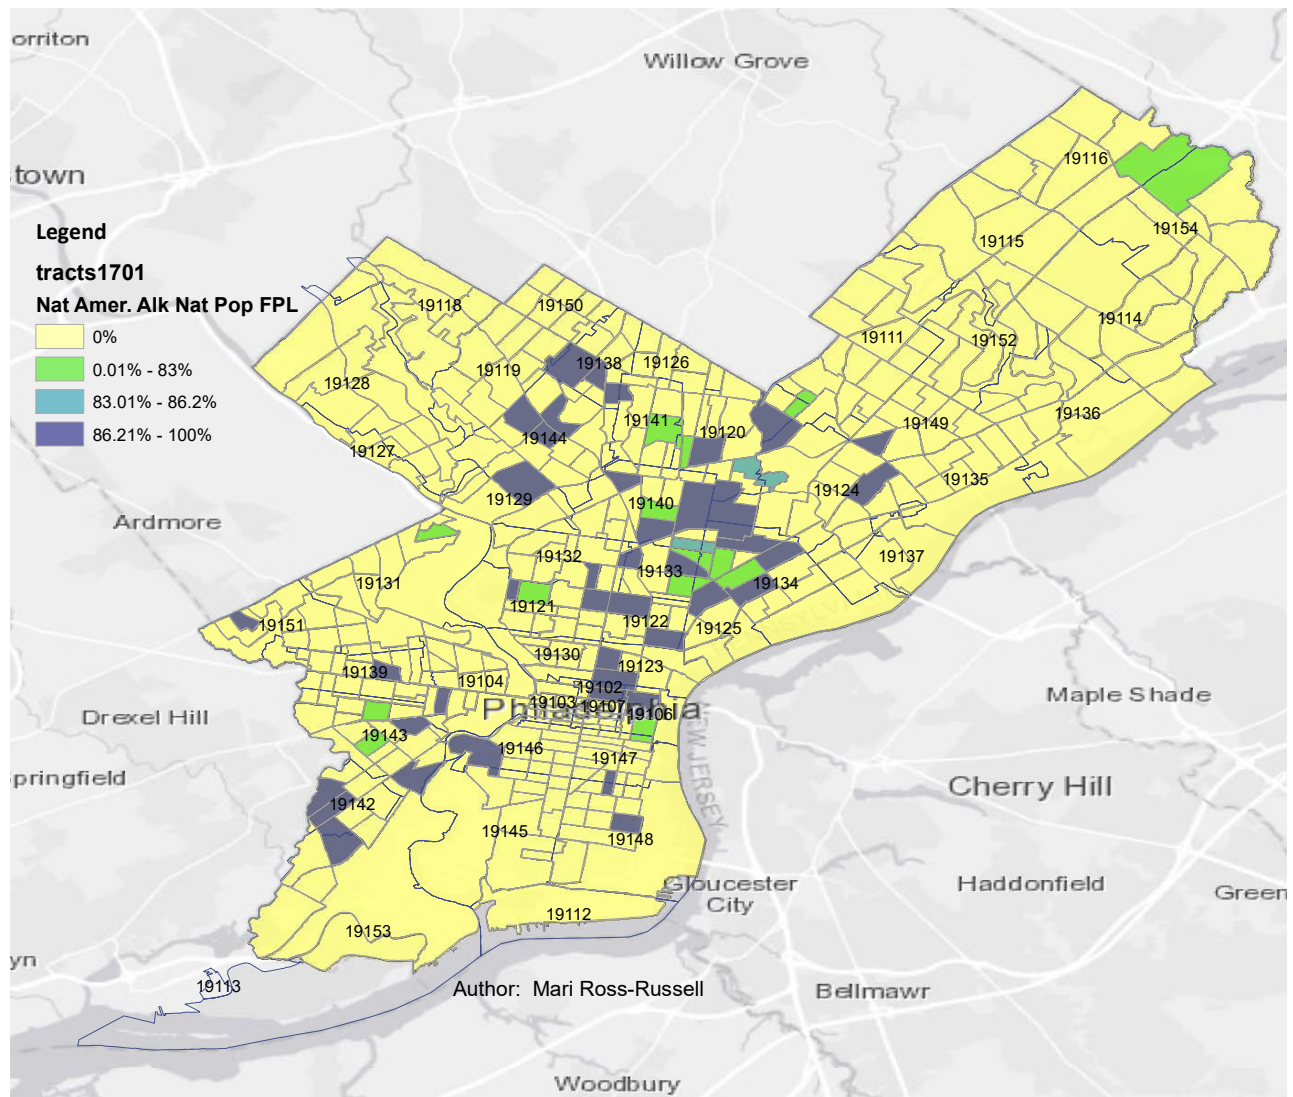

Figure 10. Percentage Native American and Alaska Native Alone Residing in Philadelphia County by Census Tract, 2015 (ACS S1701)

It is estimated that there are 142 or 37% of 384 census tracts in Philadelphia County with Native American or Alaskan Native populations. Census tracts are population density based, the smaller the population the larger the geographic area. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey and zip codes in dark blue. The highest percentage of Native American or Alaskan Natives in any census tract is an estimated 8.94% as shown in Figure 10. above. The remaining percentage categories are 0%, .01% to .31%, .32% to .6%, .61% to 1.05% and 1.06% to 8.94%.

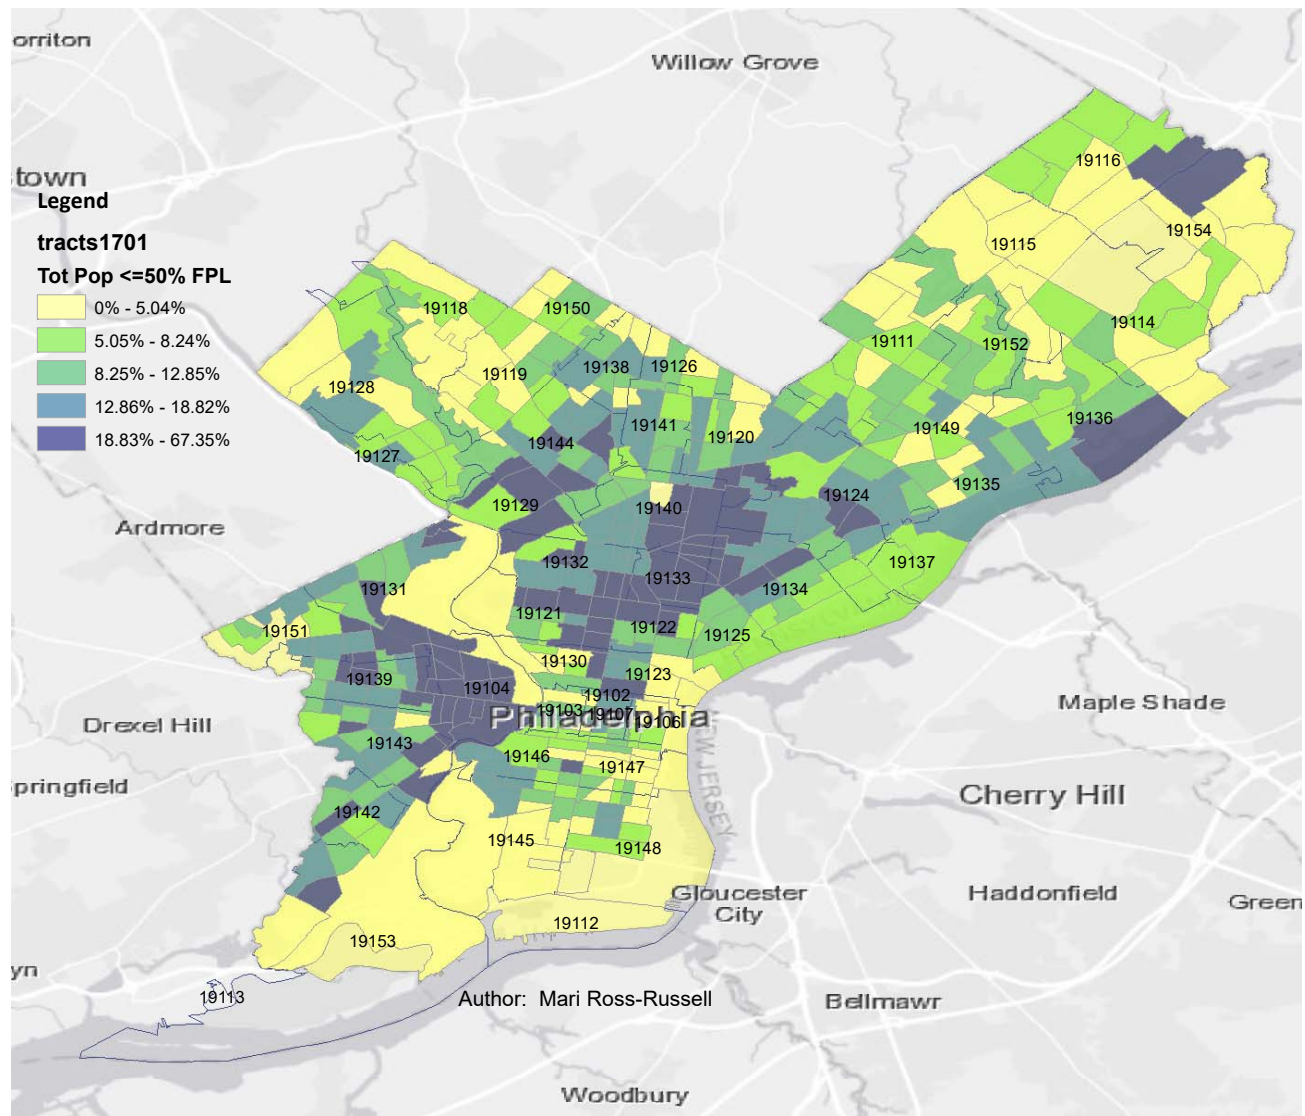

The five groupings are quintile based, meaning that the total number of census tracts are equally divided among the groups. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 11. Percentage Native American and Alaska Native Alone Residing in Philadelphia County at or Below 100% by Census Tract, 2015 (ACS S1701)

It is estimated that there are 142 out of 384 census tracts in Philadelphia County with Native American or Alaskan Native populations as of the end of 2015. It is estimated that 40 of the 142 census tracts with Native American or Alaskan Native populations are shown as having 100% living below the federal poverty level. For the percentage breakdown see Figure 11 above. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

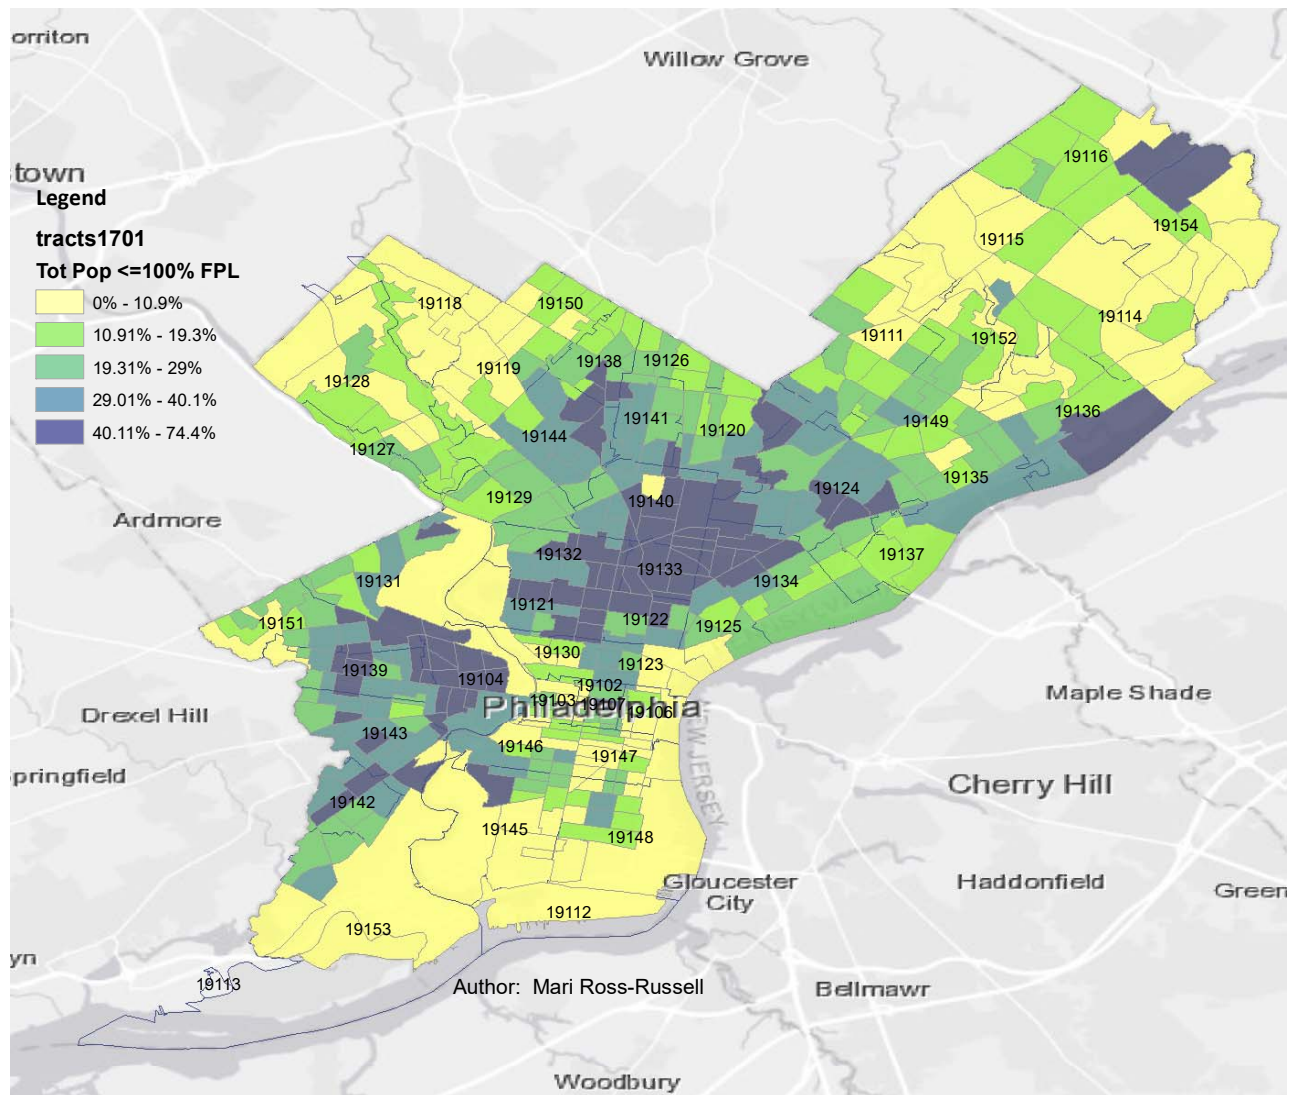

Figure 12. Percentage of the Total Population within Philadelphia County at or Below 50% Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

The five groupings are quintile based, meaning that the total number of census tracts are equally divided among the groups, there are a total of 384 census tracts in Philadelphia County. Census tracts are population density based, the wider the dispersion of the population the larger the geographic area. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey and zip codes which are outlined in dark blue. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

The map shown above in Figure 12. represents the estimated percentage of individuals within a census tract with an income that is half the federal poverty level or below as of the end of 2015. The largest percentage is 67.35%, within any one census tract, as illustrated by the dark blue areas. The smallest grouping is between 0% and 5.04% which is represented in the lightest color or yellow. The next group is 5.06% to 8.24%, then 8.25% to 12.85%, followed by 12.86% to 18.83%.

Figure 13. Percentage of the Total Population within Philadelphia County at or Below 100% Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

The map in Figure 13, shown above illustrates the estimated percentage of individuals living within a census tract whose income is at or below 100% of the federal poverty level as of the end of 2015. The smallest grouping is between 0% and 10.9% which is represented in the lightest color or yellow. The next group is 10.91% to 19.3%, then 19.31% to 29%, followed by 29.01% to 40.1% and ending with 40.11% to 74.4% the darkest color depicted above.

The five groupings are quintile based, meaning that the total number of census tracts are equally divided among the groups. Census tracts are population density based, the larger the population the smaller the geographic area. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 15. Percentage of the Total Population within Philadelphia County at or Below 150% Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

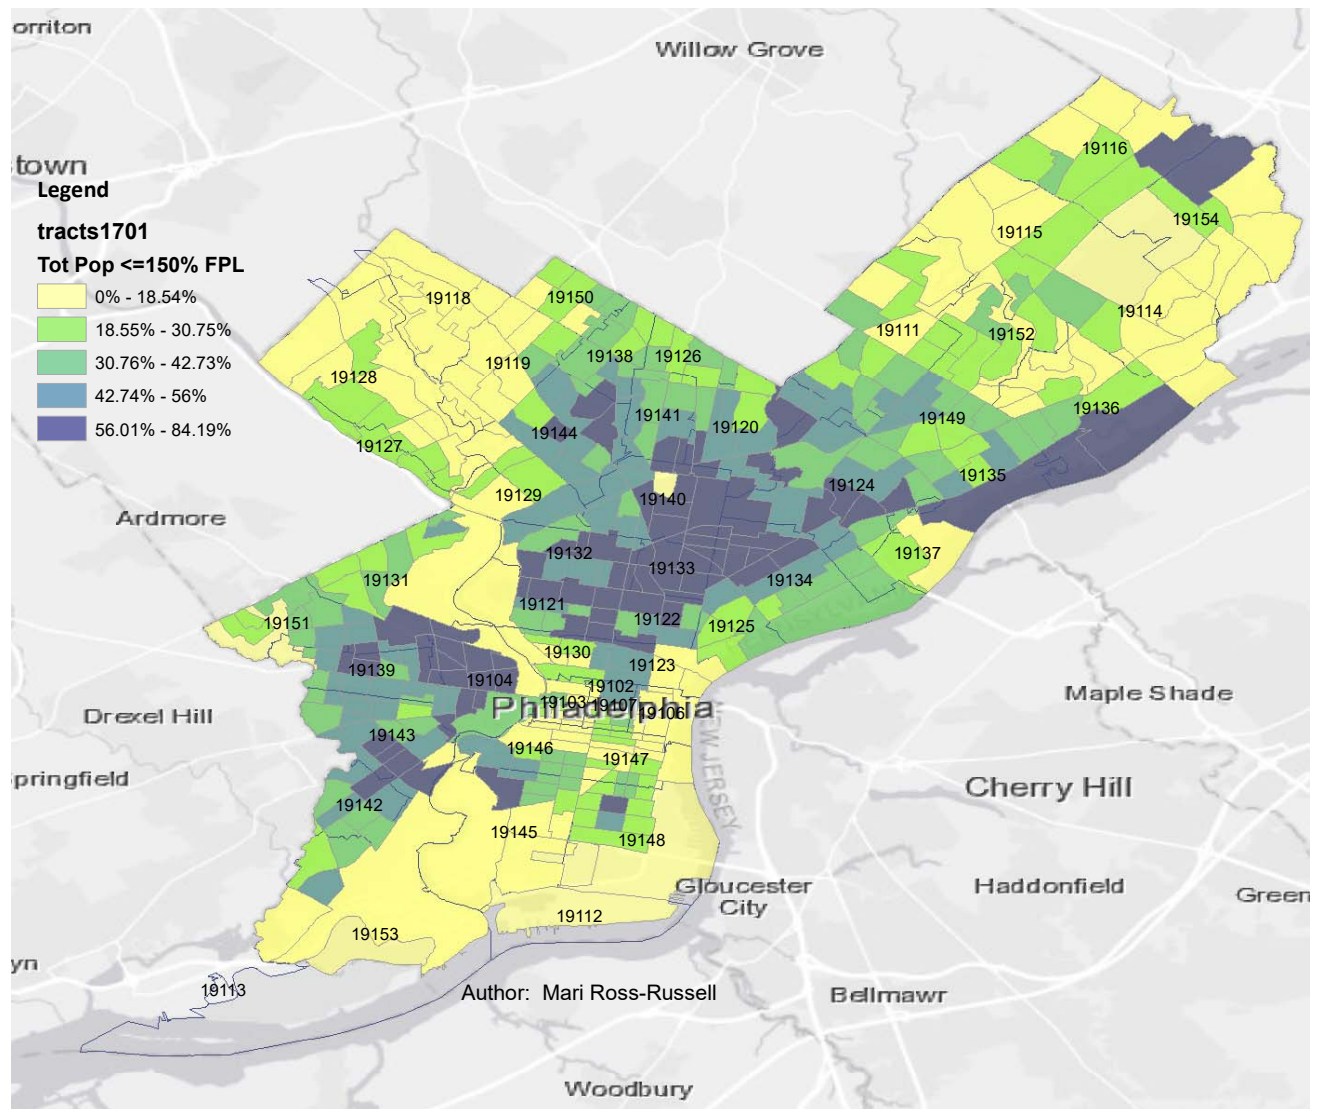

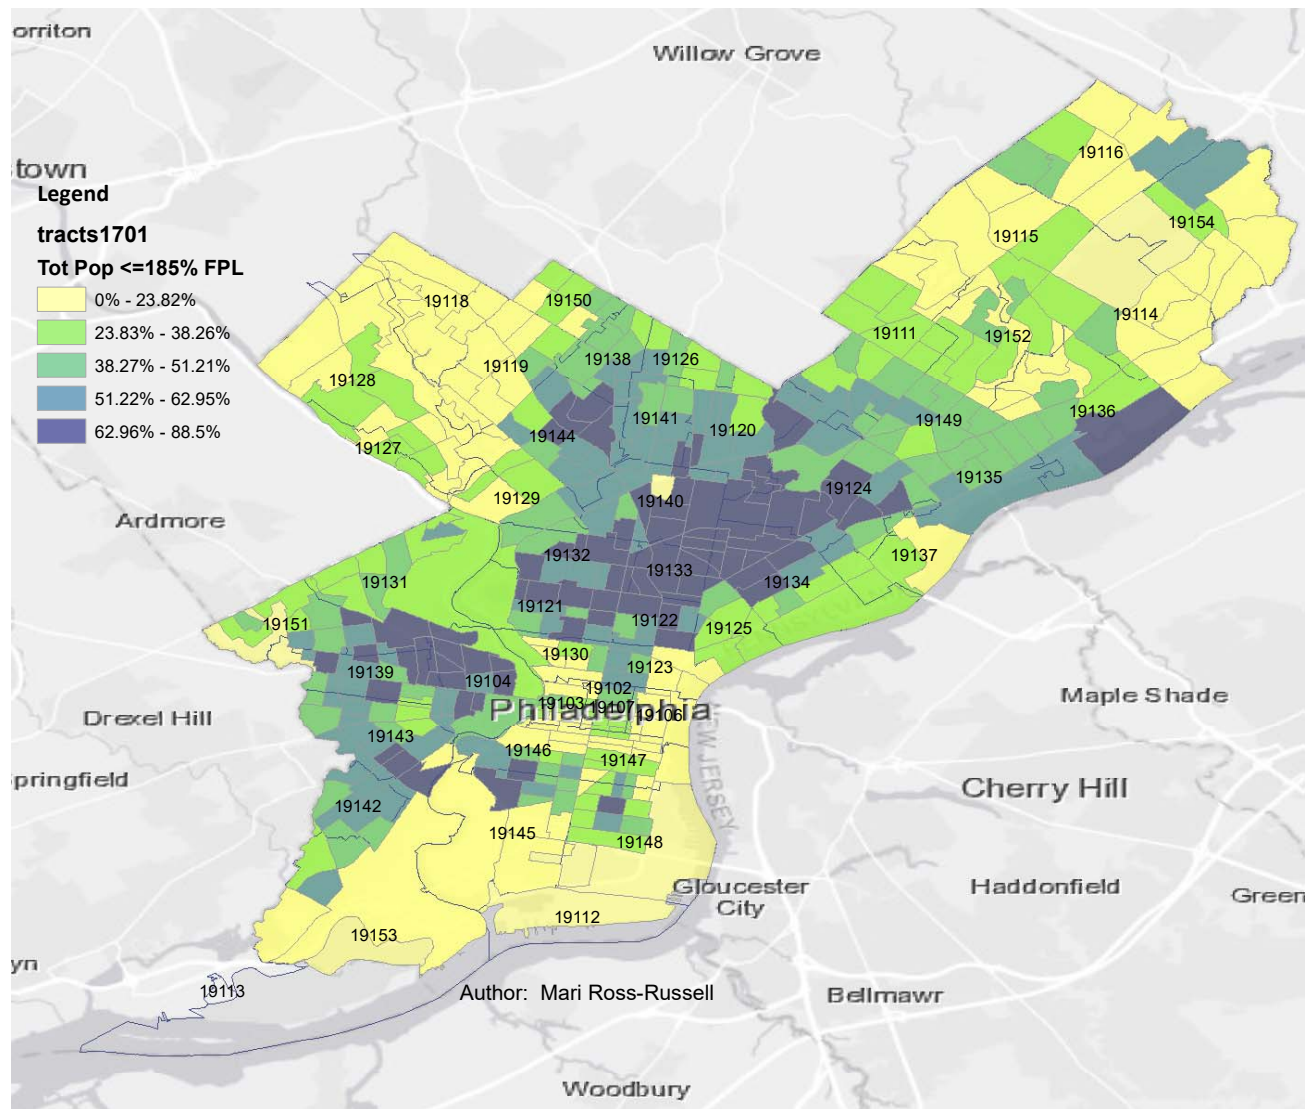

Figure 15. provides an illustration of those individuals living at or below 150% of the federal poverty level or \$17,655 per year as of 2015 by census tract. The five groupings are quintile based, the total number of census tracts are equally divided among the groups, there are 384 census tracts in Philadelphia County and each group would have 76 or 77 tracts. Census tracts are population density based, the larger the population density the smaller the geographic area. Generally, the population within a census tract is from 2,500 to 8,000. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

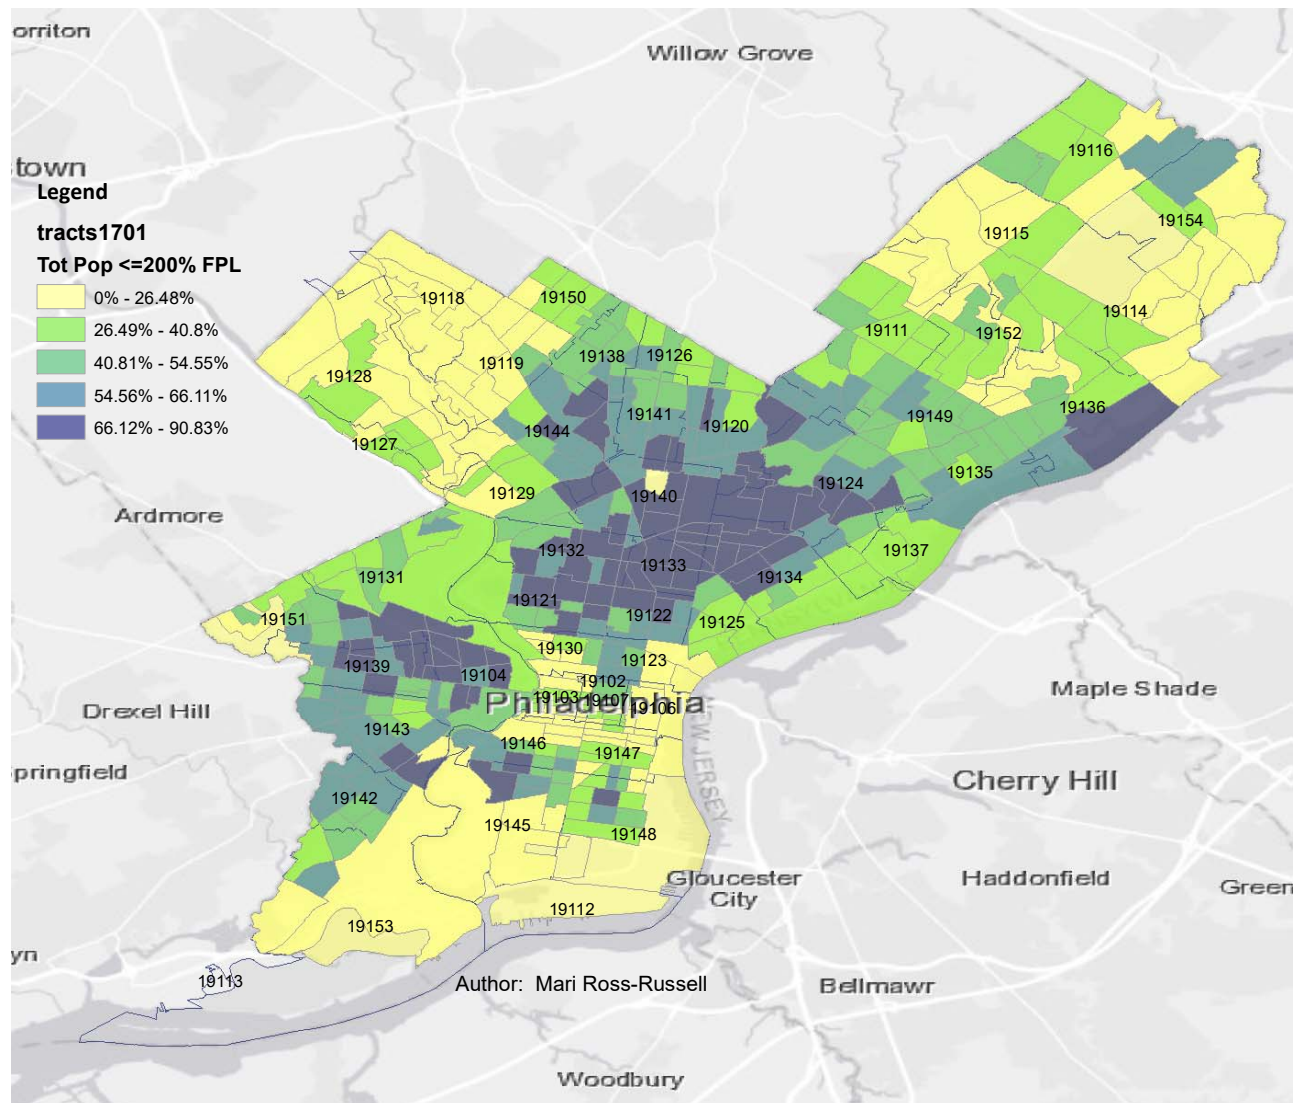

The yellow or light-colored areas have the least number of people with an annual income at or below 150% FPL. And the darkest color (blue) represents tracts with the greater number of people earning \$17,655 per year and less in 2015.

Figure 16. Percentage of the Total Population within Philadelphia County at or Below 185% Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

Individuals living at or below 185% of the federal poverty level or \$21,745 per year as of 2015 are shown in the map above by census tract, Figure 16. The five groupings are quintile based, meaning that the total number of census tracts are equally divided among the groups, there are a total of 384 census tracts in Philadelphia County. Census tracts are population density based, the wider the dispersion of the population the larger the geographic area within a census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701. The yellow or light-colored areas have the least number of people with an annual income at or below 185% FPL. And the darkest color (blue) represents tracts with the greater number of people earning at most \$21,745 per year in 2015 or 185% FPL or below.

Figure 17. Percentage of the Total Population within Philadelphia County at or Below 200% Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

Figures 17, 18, 19 and 20 reflect individuals at various federal poverty levels. The levels range from 200% FPL and below or \$23,540, 300% FPL and below (\$35,310), 400% FPL and below (\$47,080) and 500% or below at \$47,080. The lower end of the percentages are represented with yellow or the lightest shade through dark blue which are the highest percentage groupings. The five groupings are quintile based, meaning that the total number of census tracts are equally divided among the groups. Census tracts are population density based, the wider the dispersion of the population the larger the geographic area within a census tract, the more densely populated the area the smaller the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey and the zip codes in dark blue. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 18. Percentage of the Total Population within Philadelphia County at or Below 300% Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

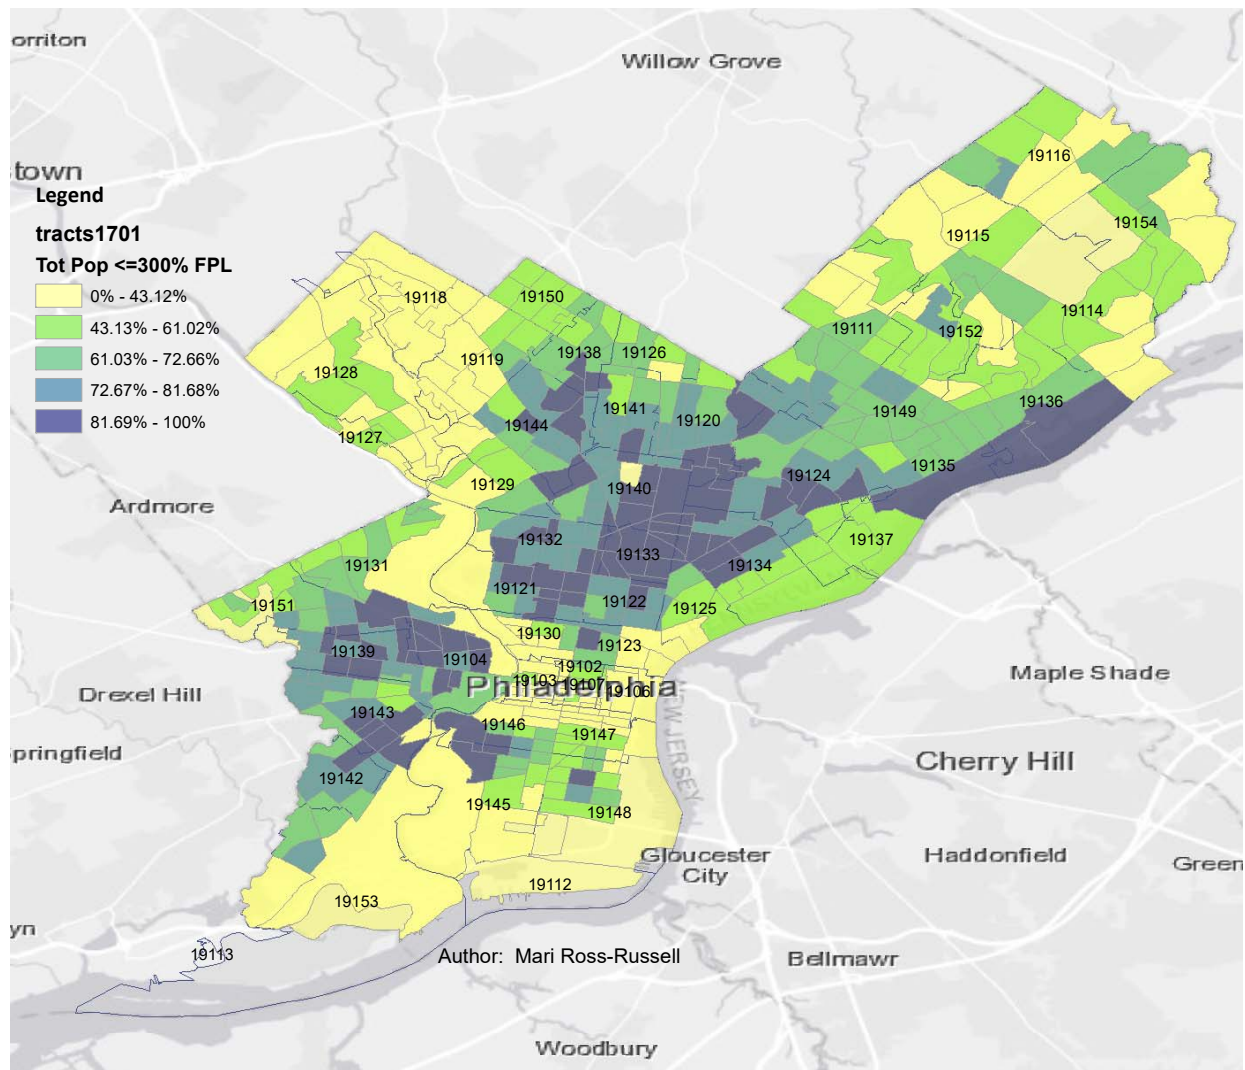

Figure 19. Percentage of the Total Population within Philadelphia County at or Below 400% Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

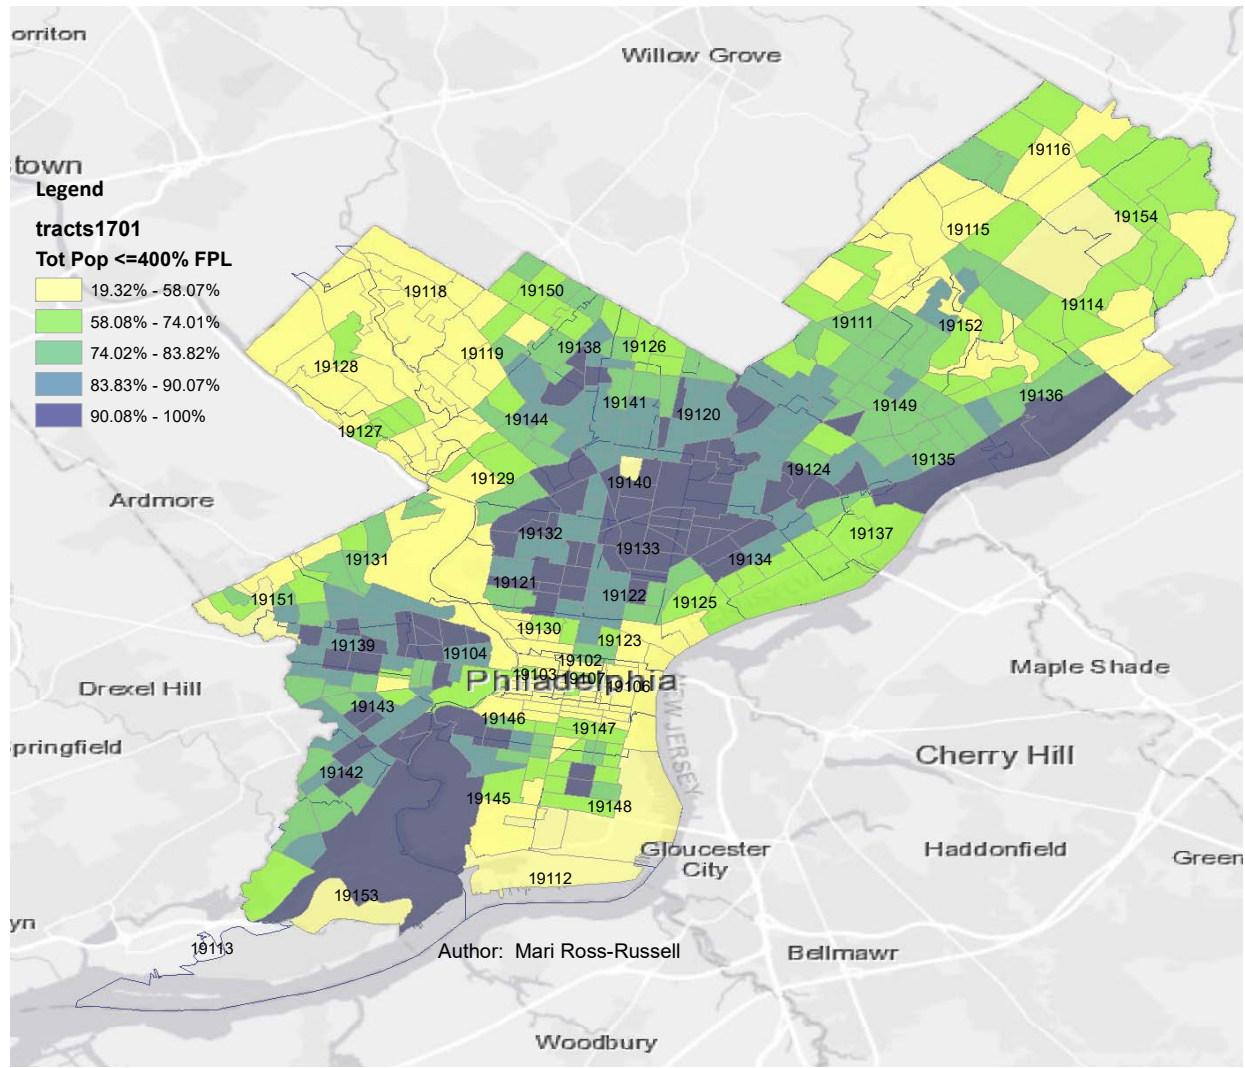

Figure 20. Percentage of the Total Population within Philadelphia County at or Below 500% Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

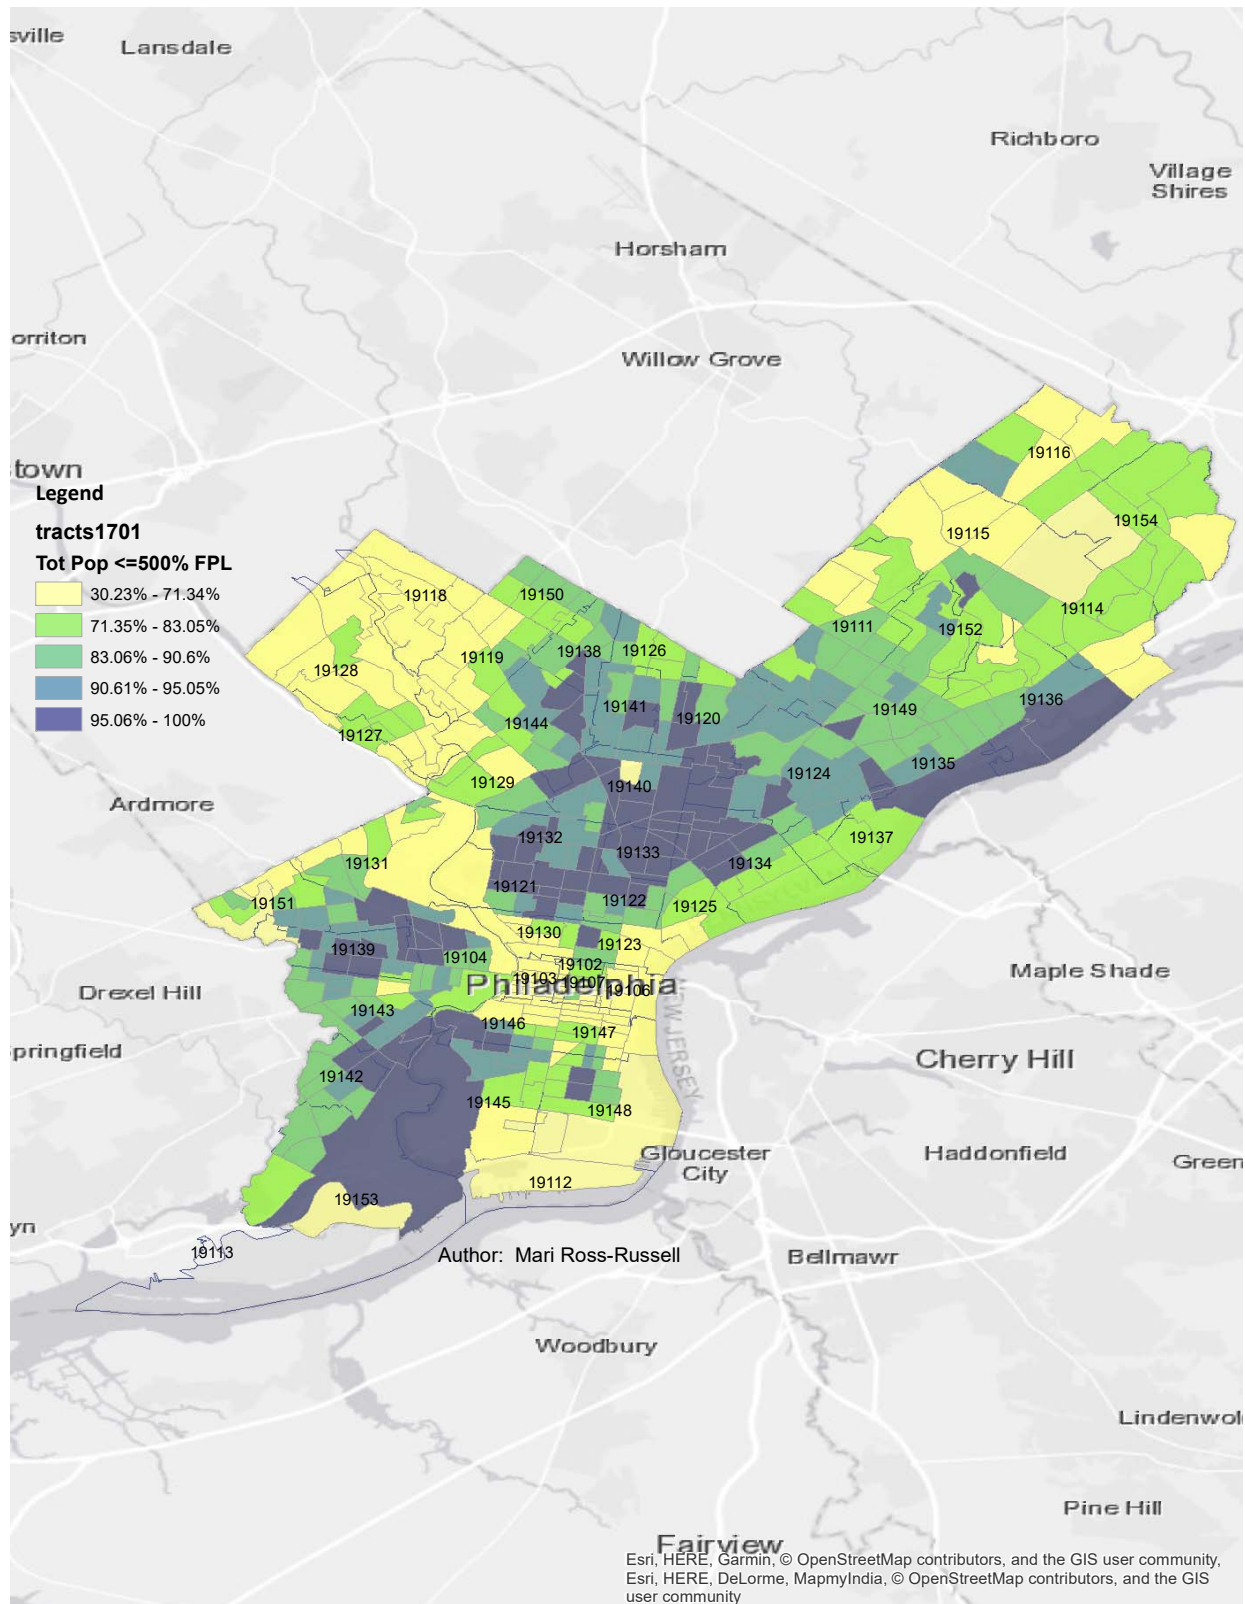

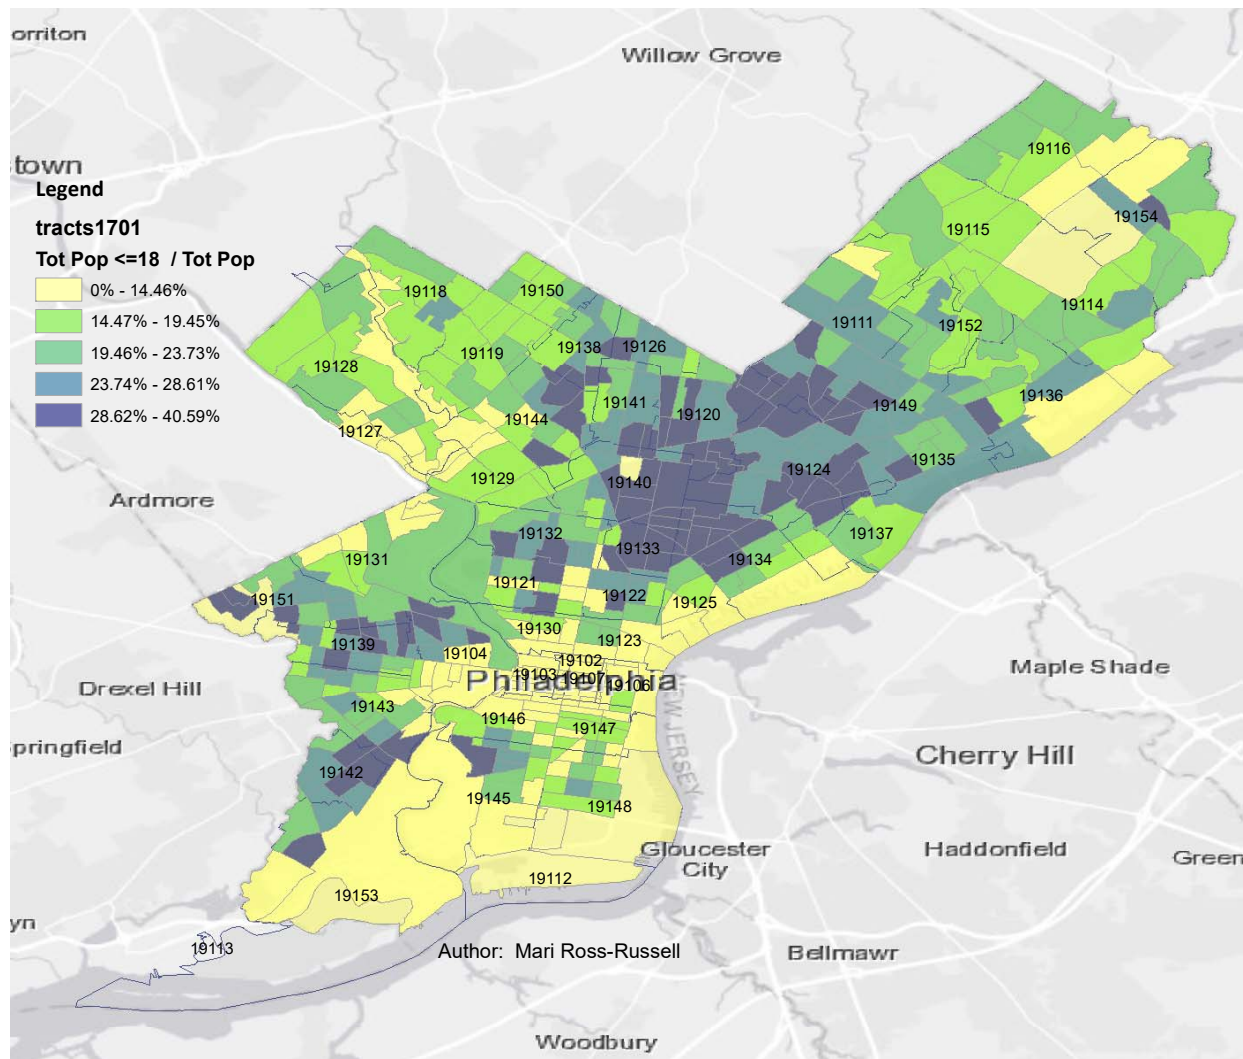

Figure 21. Percentage of the Total Population within Philadelphia County Under the Age of 18 by Census Tract, 2015 (ACS 5yr S1701)

The under 18 population estimate by census tract is provided above in Figure 21. The smallest percentage for this age group by census tract was 0% -14.46% through to the largest percentage, 40.59%. The five groupings are quintile based, meaning that the total number of census tracts are equally divided among the groups. Census tracts are population density based, the wider the dispersion of the population the larger the geographic area within a census tract, the more densely populated the area the smaller the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 22. Percentage of the Total Population within Philadelphia County Under the Age of 18 at or below 100% Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

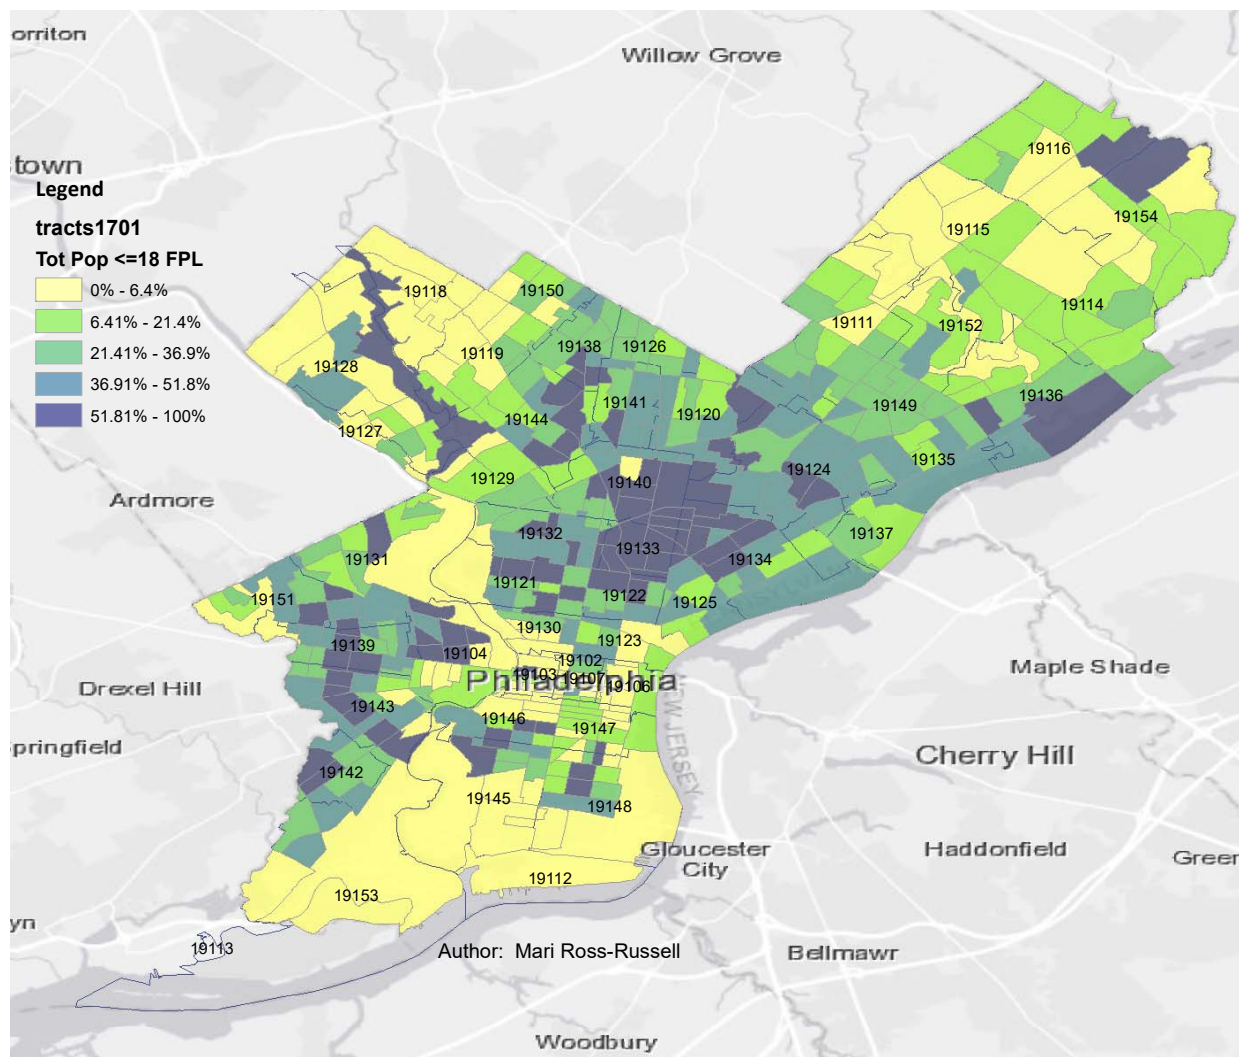

Figure 22 shows those individuals under 18 years of age who are living at or below 100% of the federal poverty level. The five groupings are quintile based and the total number of census tracts are equally divided among the groups; there are a total of 384 census tracts in Philadelphia County and each group would have 76 or 77 tracts. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey. The lowest percentage grouping is 0% - 6.4%, then 6.41% - 21.4% is second, 21.41% to 36.9% is third, 36.91% - 51.8% is fourth and 51.81% to 100% represents the last percentage grouping.

The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 24. Percentage of the Total Population within Philadelphia County Age 18 to 64 at or below 100% Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

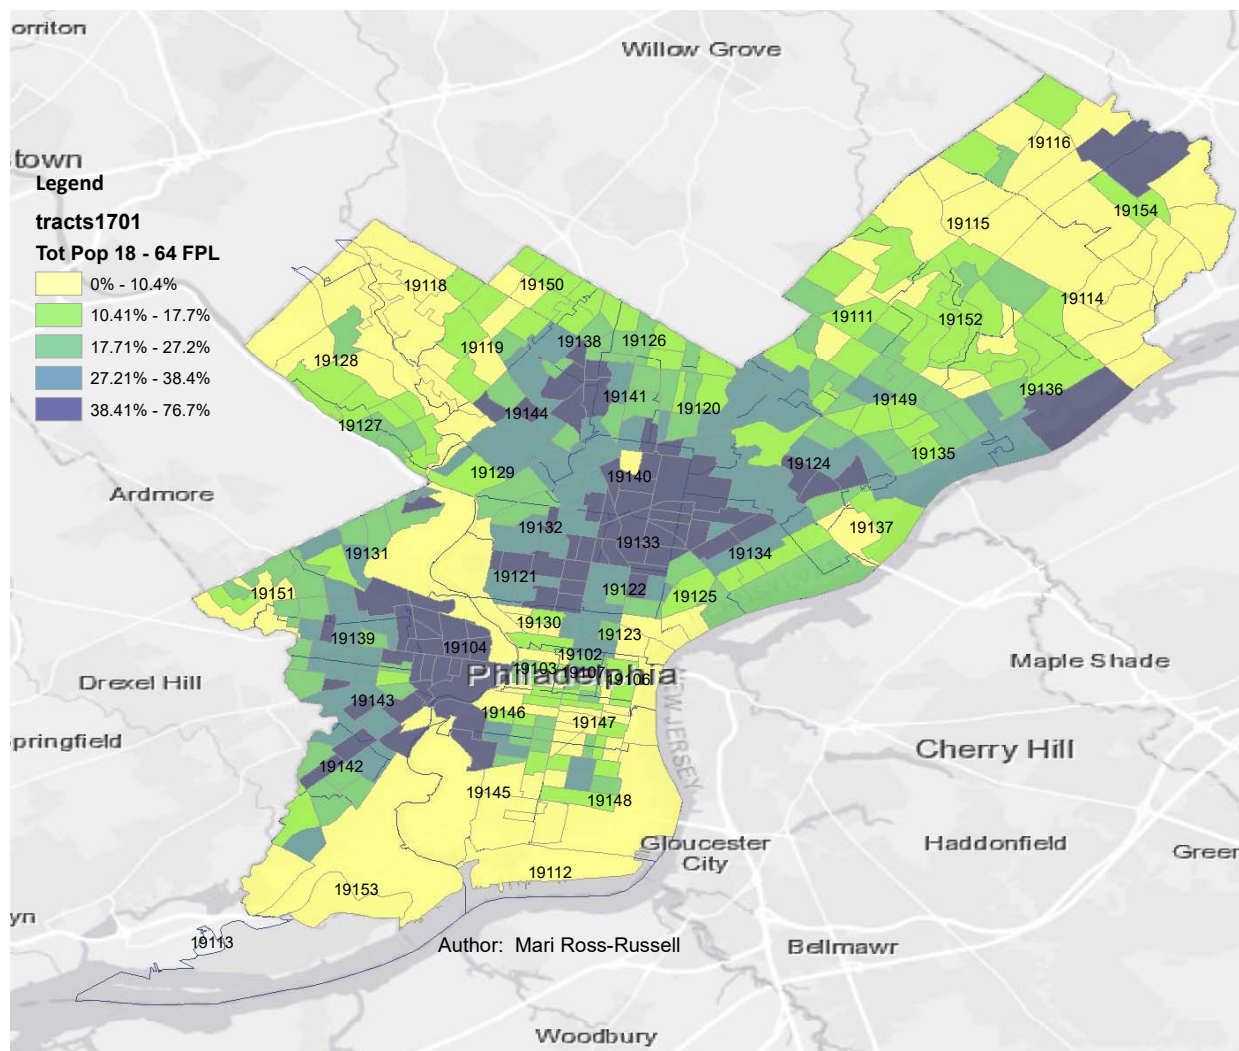

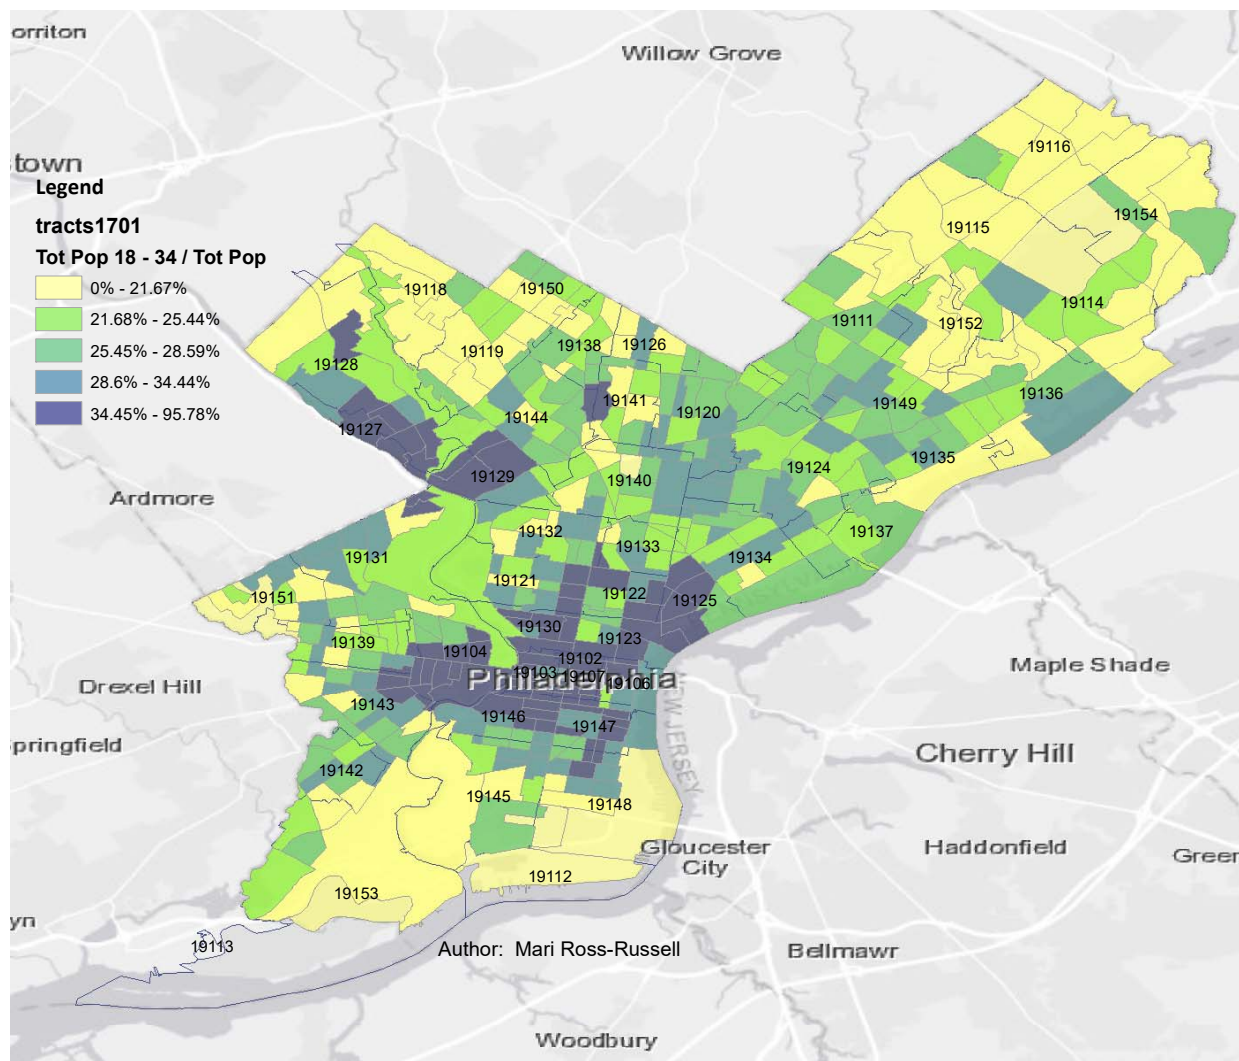

Figure 24 shows those individuals 18 to 64 years of age who are living at or below 100% of the federal poverty level. The five groupings are quintile based and the total number of census tracts are equally divided among the groups. Census tracts are population density based. The wider the dispersion of the population the larger the geographic area within a census tract. The more densely populated the area the smaller the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey and zip codes outlined in dark blue. The lowest percentage grouping is 0% - 10.4%, then 10.41% - 17.7% is second, 17.71% to 27.2% is third, 27.21% - 38.4% is fourth and 38.41% to 76.7% represents the last percentage grouping.

The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 25. Percentage of the Total Population within Philadelphia County Age 18 to 34 by Census Tract, 2015 (ACS 5yr S1701)

The 18 to 34 population estimate by census tract is provided above in Figure 25. The lowest percentage grouping is 0% - 21.67%, then 21.68% - 25.44% is second, 25.45% to 28.59% is third, 28.6% - 34.44% is fourth and 34.45% to 95.76% represents the last percentage grouping. The five groupings are quintile based, meaning that the total number of census tracts are equally divided among the groups, there are a total of 384 census tracts in Philadelphia County. Census tracts are population density based, the larger the concentration of the population the smaller the geographic area within a census tract, the less densely populated the area the larger the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 26. Percentage of the Total Population within Philadelphia County Age 18 to 34 at or below 100% Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

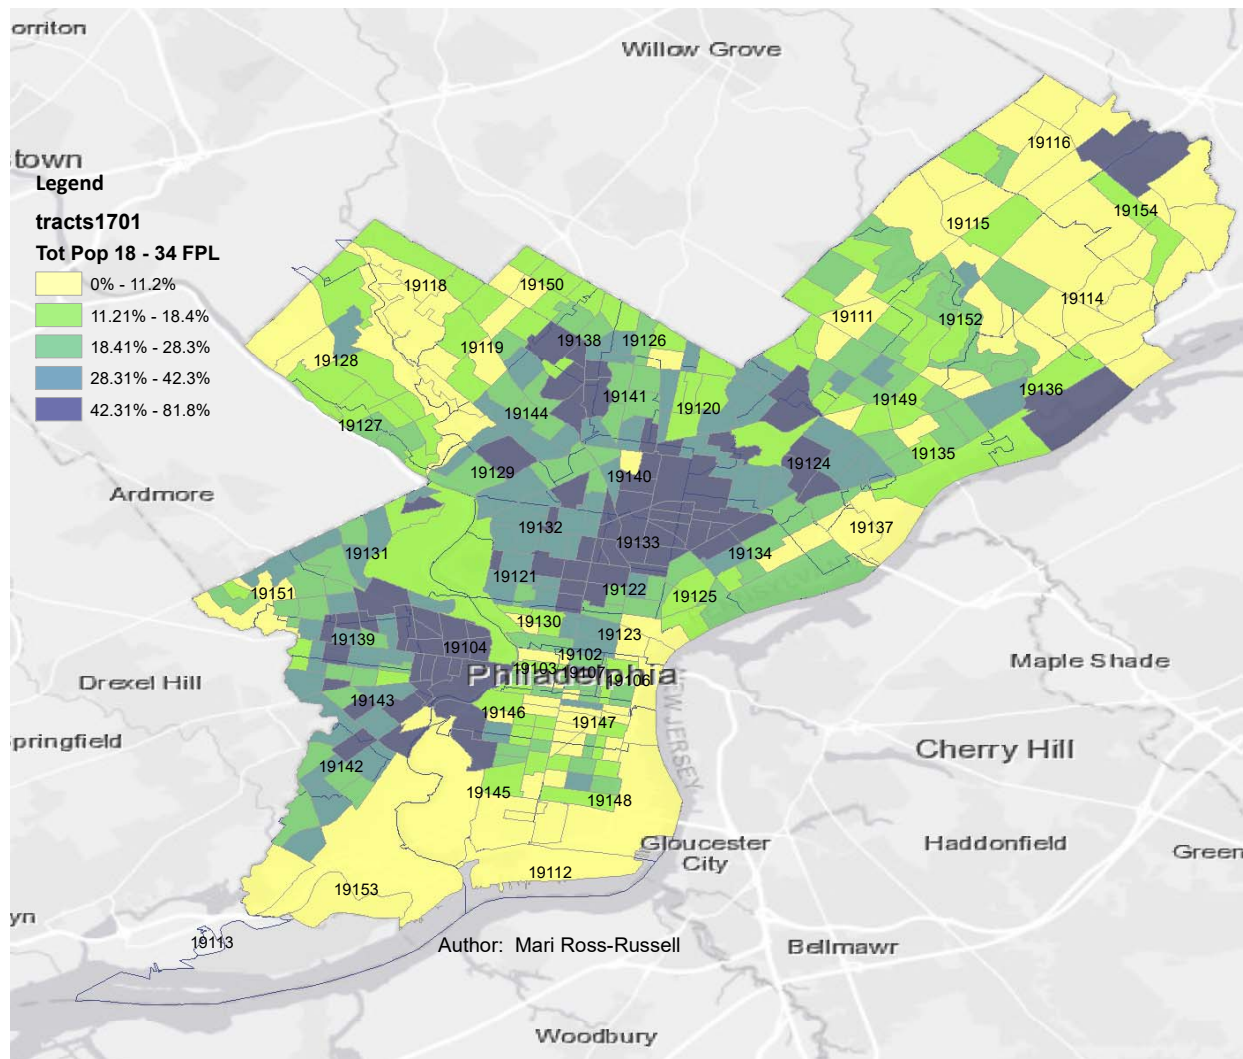

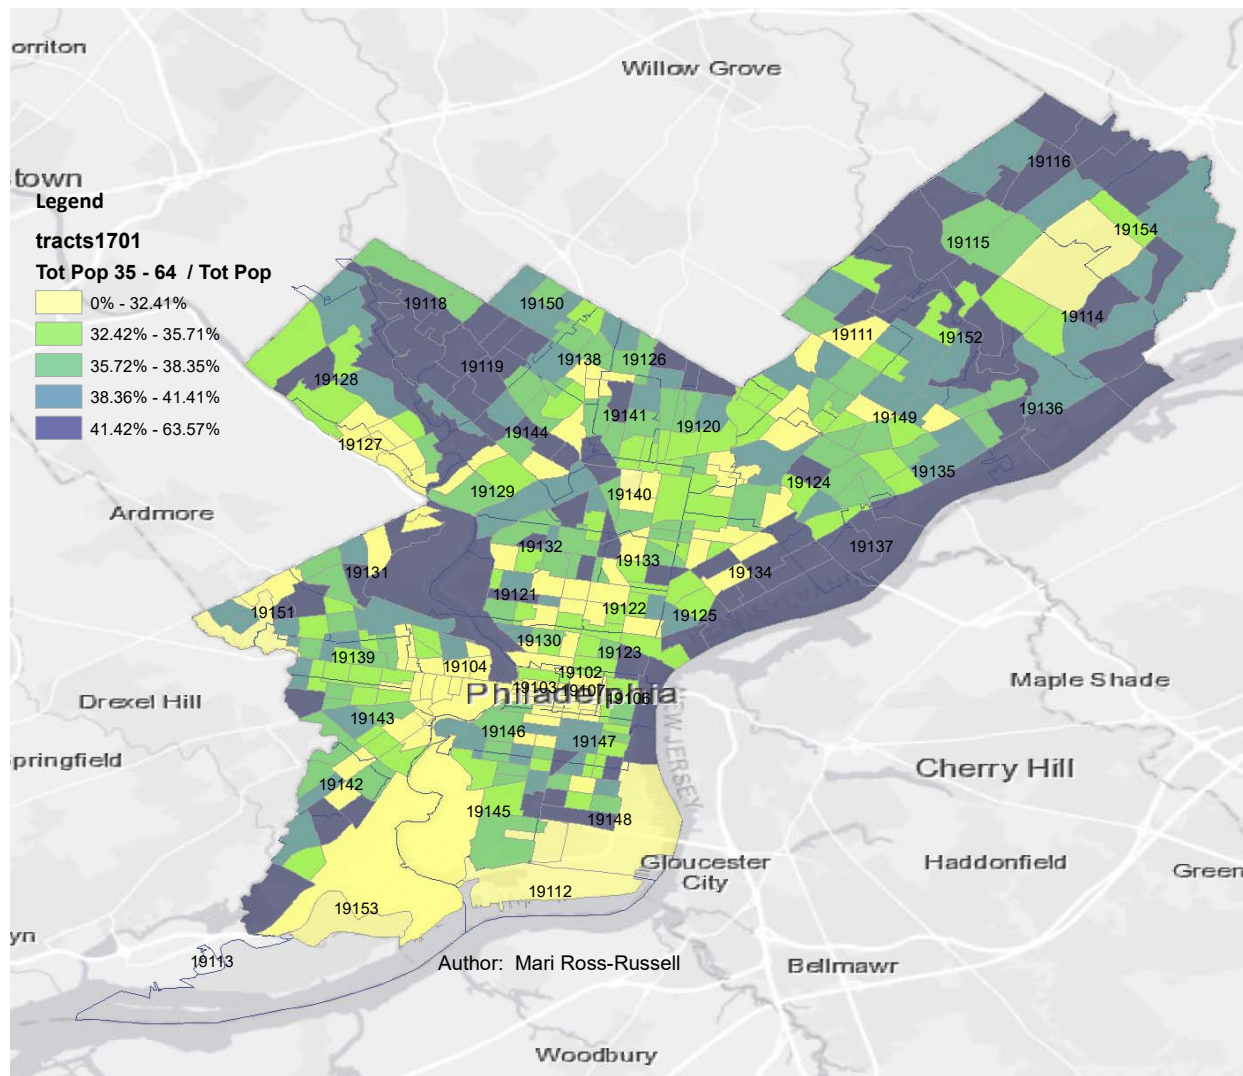

Figure 26 provides a breakdown of those individuals 18 to 34 years of age who are living at or below 100% of the federal poverty level. The five groupings are quintile based and the total number of census tracts are equally divided among the groups. The wider the dispersion of the population the larger the geographic area within a census tract. The more densely populated the area the smaller the census tract. The population within a census tract is generally from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey. The lowest percentage grouping is 0% - 11.2%, then 11.21% - 18.4% is second, 18.41% to 28.3% is third, 28.31% - 42.3% is fourth and 42.31% to 81.8% represents the last percentage grouping.

The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 27. Percentage of the Total Population within Philadelphia County Age 35 to 64 by Census Tract, 2015 (ACS 5yr S1701)

The 35 to 64 population estimate by census tract is provided above in Figure 27. The smallest percentages for this age group living in Philadelphia County by census tract was 0% - 32.41% through to the largest percentages, 41.42% - 63.57%. The five groupings are quintile based. There are a total of 384 census tracts in Philadelphia County and each group would have 76 or 77 tracts. Census tracts are population density based, the larger the concentration of the population the smaller the geographic area within a census tract, the less densely populated the area the larger the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey and zip codes in dark blue. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 28. Percentage of the Total Population within Philadelphia County Age 35 to 64 at or below 100% Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

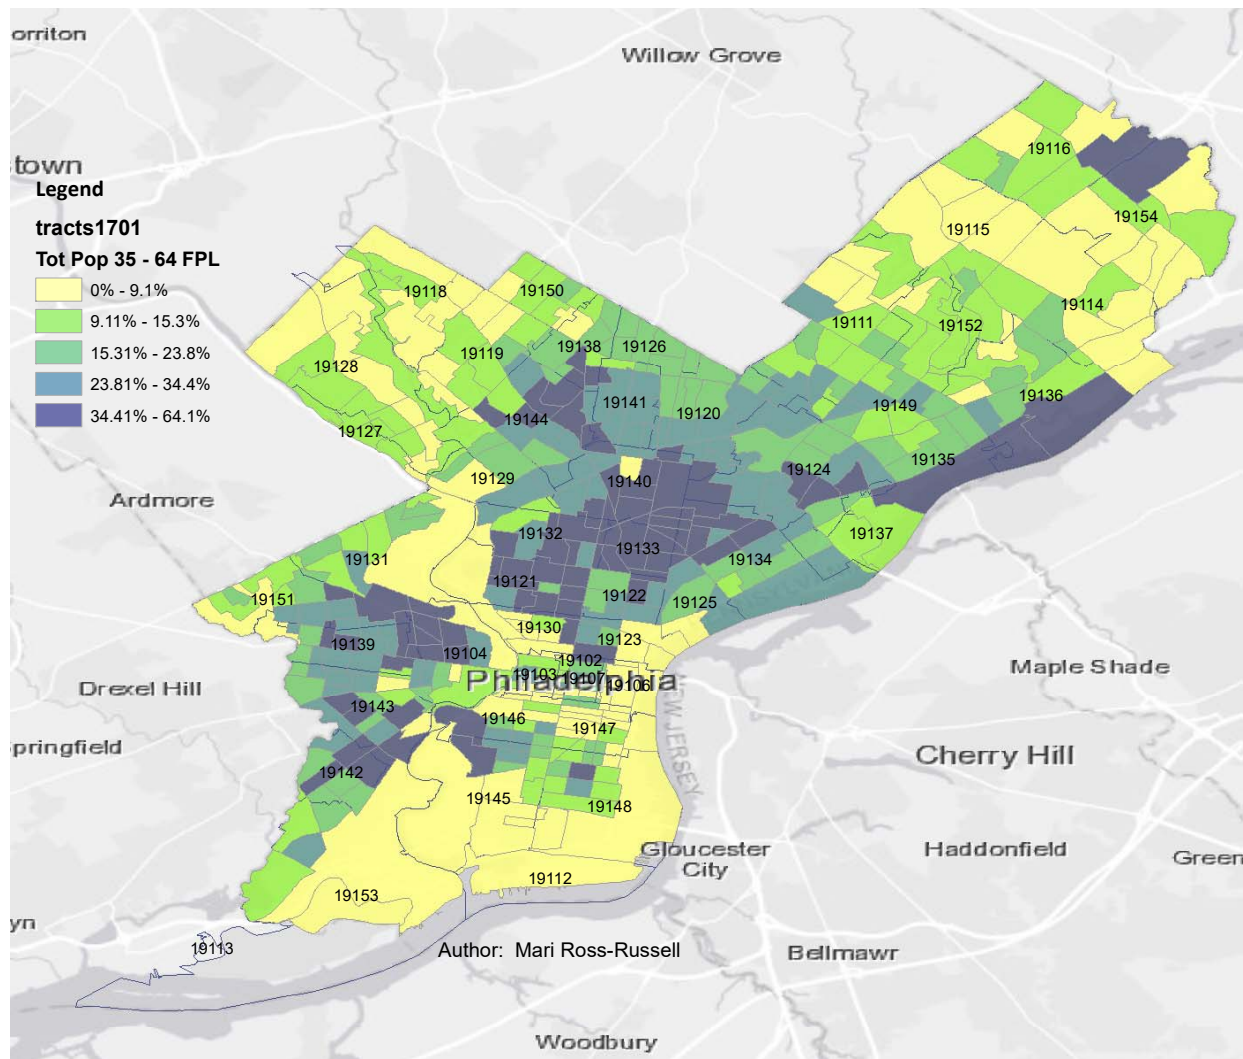

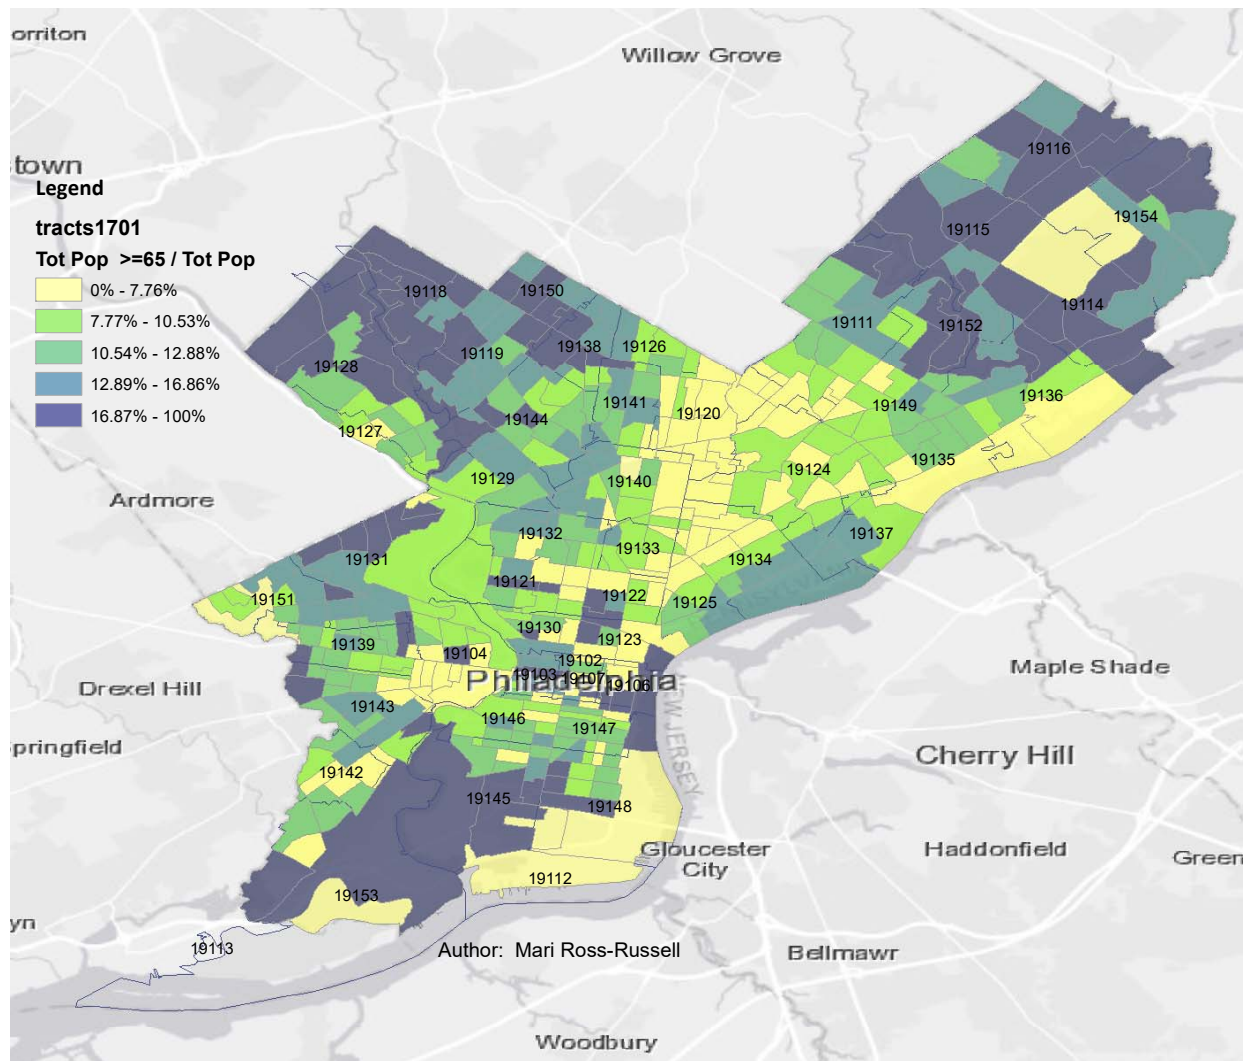

Figure 28 illustrates those individuals 35 to 64 years of age who are living at or below 100% of the federal poverty level in Philadelphia County at year end 2015. The five groupings are quintile based and the total number of census tracts are equally divided among the groups, there are a total of 384 census tracts in Philadelphia County and each group would have 76 or 77 tracts. Census tracts are population density based. The wider the dispersion of the population the larger the geographic area within a census tract. The more densely populated the area the smaller the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey. The lowest percentage grouping is 0% - 9.1%, then 9.11% - 15.3% is second, 15.31% to 23.8% is third, 23.81% - 34.4% is fourth and 34.41% to 64.1% represents the last percentage grouping.

The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 29. Percentage of the Total Population within Philadelphia County Age 65 and Older by Census Tract, 2015 (ACS 5yr S1701)

The population estimate for those 65 and older by census tract is provided above in Figure 29. The smallest percentage for this age group by census tract was 0% through to the largest percentage, 100%. (Please note: there is just one census tract where the total population is estimated to be 65 and over.) The five groupings are quintile based, meaning that the total number of census tracts are equally divided among the groups. Census tracts are population density based, the larger the concentration of the population the smaller the geographic area within a census tract, the less densely populated the area the larger the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 30. Percentage of the Total Population within Philadelphia County Age 65 and older at or below 100% Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

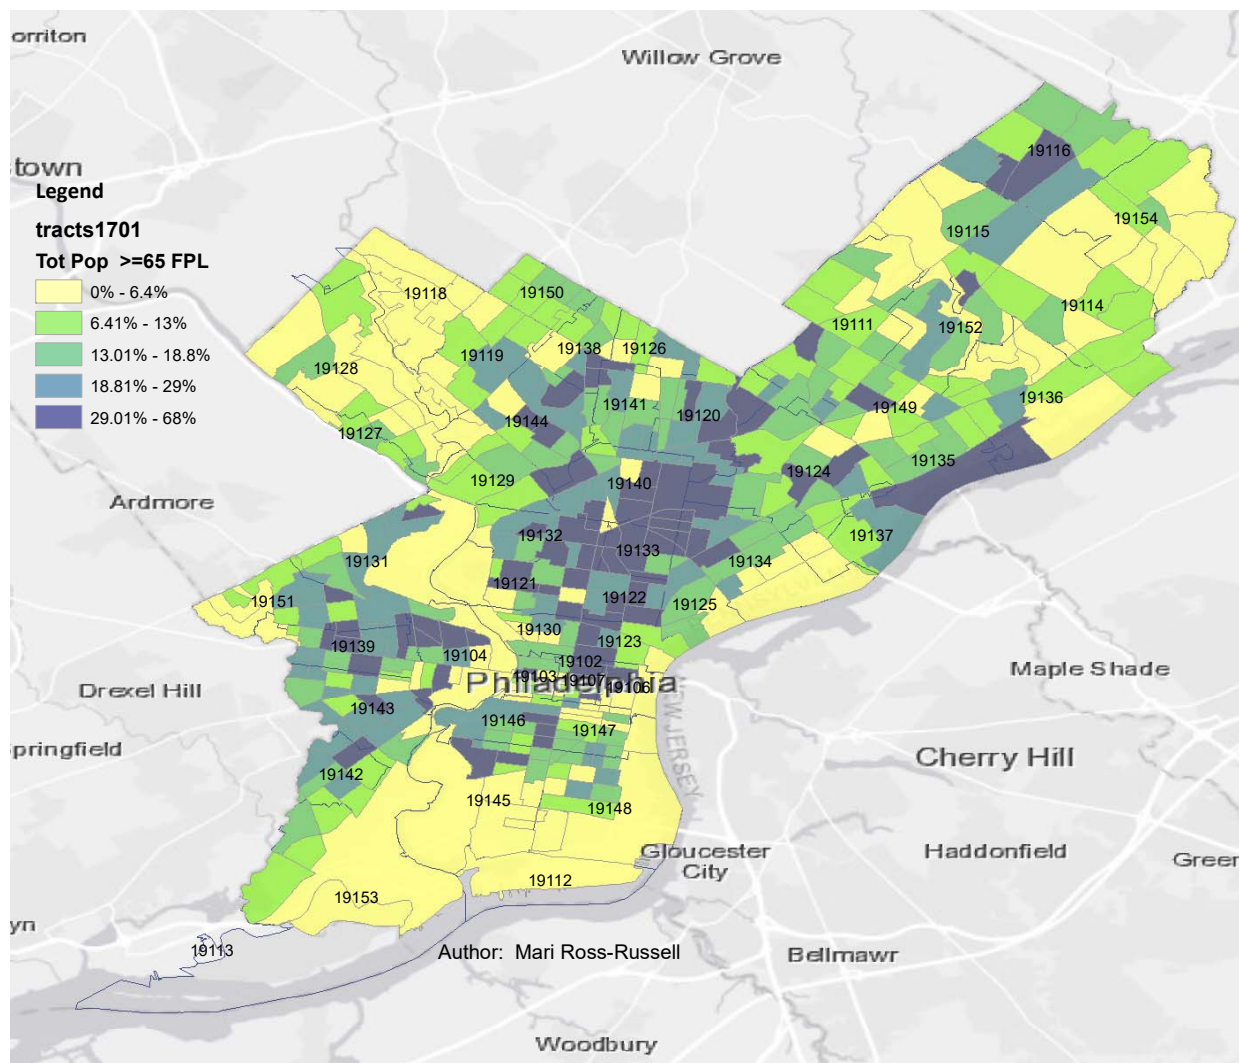

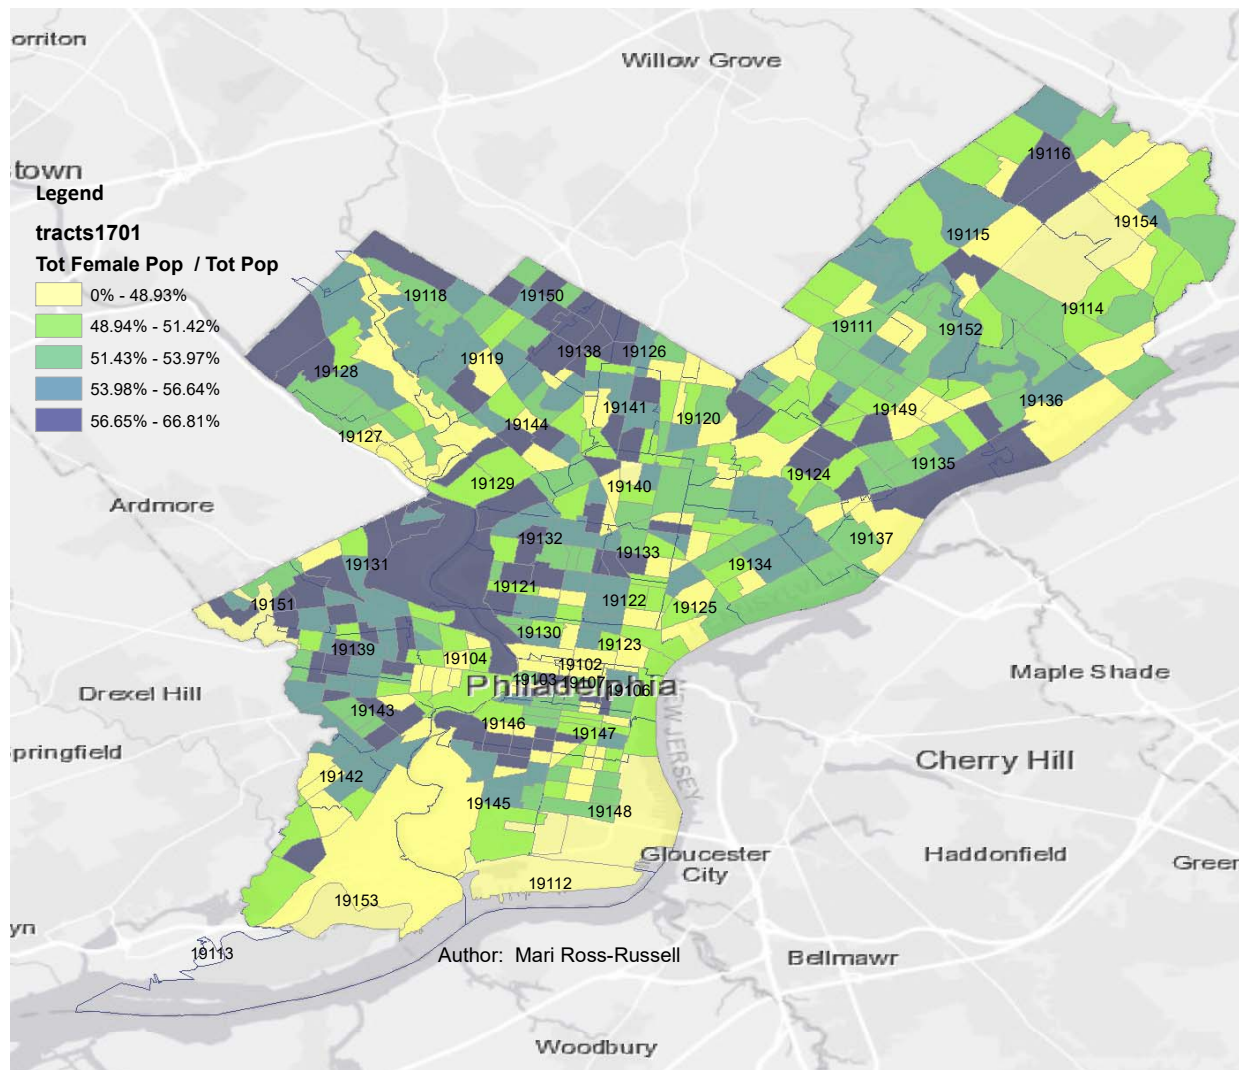

Figure 30 represents those individuals 65 years of age and older who are living at or below 100% of the federal poverty level in Philadelphia County by the end of 2015. The five groupings are quintile based and the total number of census tracts are equally divided among the groups. Census tracts are population density based. The wider the dispersion of the population the larger the geographic area within a census tract. The more densely populated the area the smaller the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey and zip codes in dark blue. The lowest percentage grouping is 0% - 6.4%, then 6.41% - 13% is second, 13.01% to 18.8% is third, 18.81% - 29% is fourth and 29.01% to 68% represents the last percentage grouping.

The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 31. Percentage of the Total Female Population within Philadelphia by Census Tract, 2015 (ACS 5yr S1701)

In four out of the five percentage groupings females represent 50% or more of the total population within the various census tracts shown for Philadelphia County in 2015 (Figure 31.). The smallest percentage grouping was 0% - 48.93%, then 48.94% - 51.42%, followed by 51.43% - 53.97%, with 53.98% – 56.64% and 56.65% – 66.81% fourth and fifth respectively. The five groupings are quintile based and the total number of census tracts are equally divided among the groups. Census tracts are population density based. The wider the dispersion of the population the larger the geographic area within a census tract. The more densely populated the area the smaller the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey.

Cities in Philadelphia and surrounding counties have been included to act as reference points. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 32. Number of Babies Born in Philadelphia (2014) that were of Low birth-weight, by Census Tract

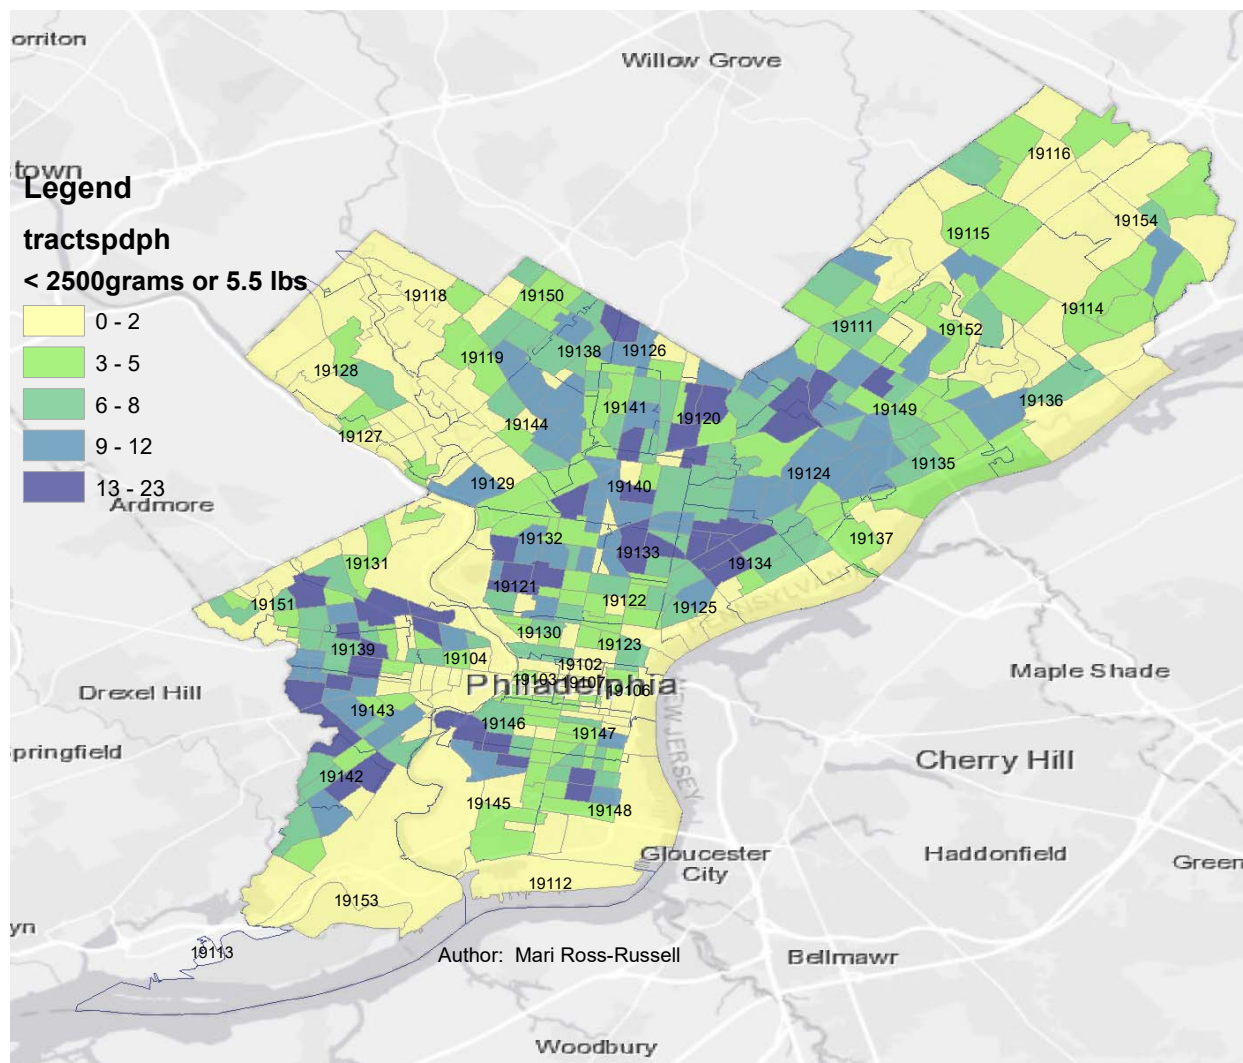

Figure 32. represents all the infants born that were less than 2,500 grams or 5.5 pounds in 2014. The Vital Status Events by Census Tract – Supplemental Tables can be found at the following location for more detailed information <http://www.phila.gov/health/commissioner/VitalStatistics.html>. There was a total of 2,362 live births under 2,500 grams as of year-end 2014. The five groupings are quintile based and the total number of census tracts are equally divided among the groups. The map above is broken out by census tracts which are outlined in grey with the zip codes outlined in dark blue. The lowest grouping is 0 - 2 shown in the lightest color (yellow), then 3 - 5 is second (light green), 6 to 8 is third (darker green), 9 - 12 is fourth (light blue) and 13 to 23 represents the last grouping (dark blue).

The map in the figure was generated using ArcMap 10.5.1.

Figure 33. Babies Born in Philadelphia (2014) that were of Low Birth-weight by Race and Ethnicity and Census Tract. (Dot Density map: 1Dot =1 low birth weight infant)

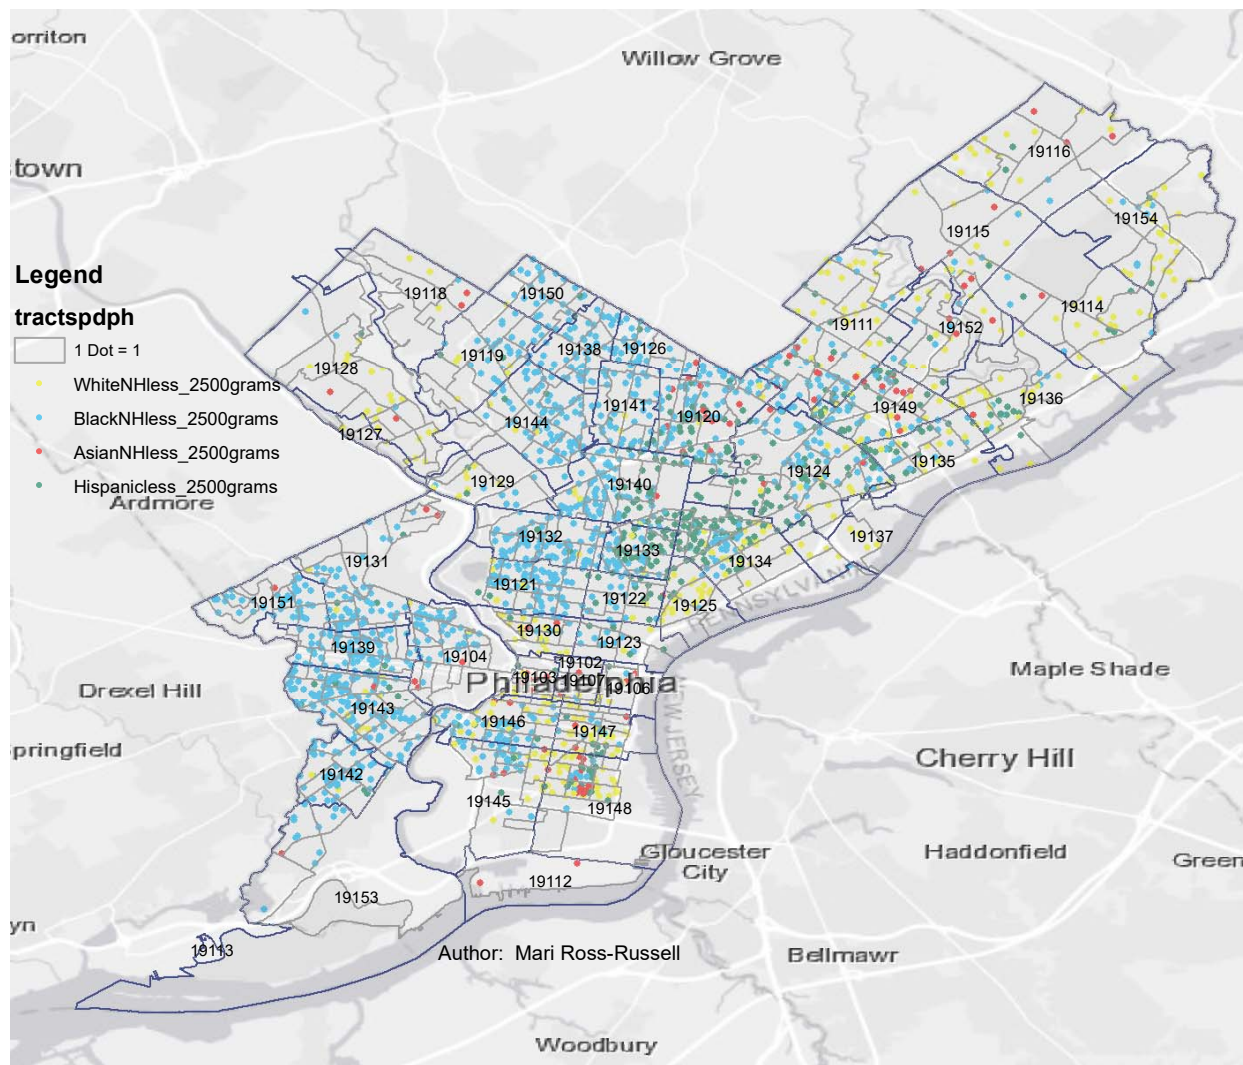

Figure 33. is a dot density map which represents all the infants born that were less than 2,500 grams or 5.5 pounds in 2014 by race or ethnicity. The Vital Status Events by Census Tract – Supplemental Tables can be found at the following location for more detailed information <http://www.phila.gov/health/commissioner/VitalStatistics.html>. There was a total of 2,362 live births under 2,500 grams as of year-end 2014. Of that total 416 were White non-Hispanic (yellow dot), 1,288 were Black non-Hispanic (turquoise dot), 95 were Asian non-Hispanic (red dot) and 373 were Hispanic (green dot). There were 190 other for race that were not included. The map above is broken out by census tracts which are outlined in grey with the zip codes outlined in dark blue. The map in the figure was generated using ArcMap 10.5.1.

Figure 34. Babies born in Philadelphia (2014) to Mothers Less than 18 Years of Age by Race or Ethnicity and Census Tract. (Dot Density map: 1Dot =1 birth)

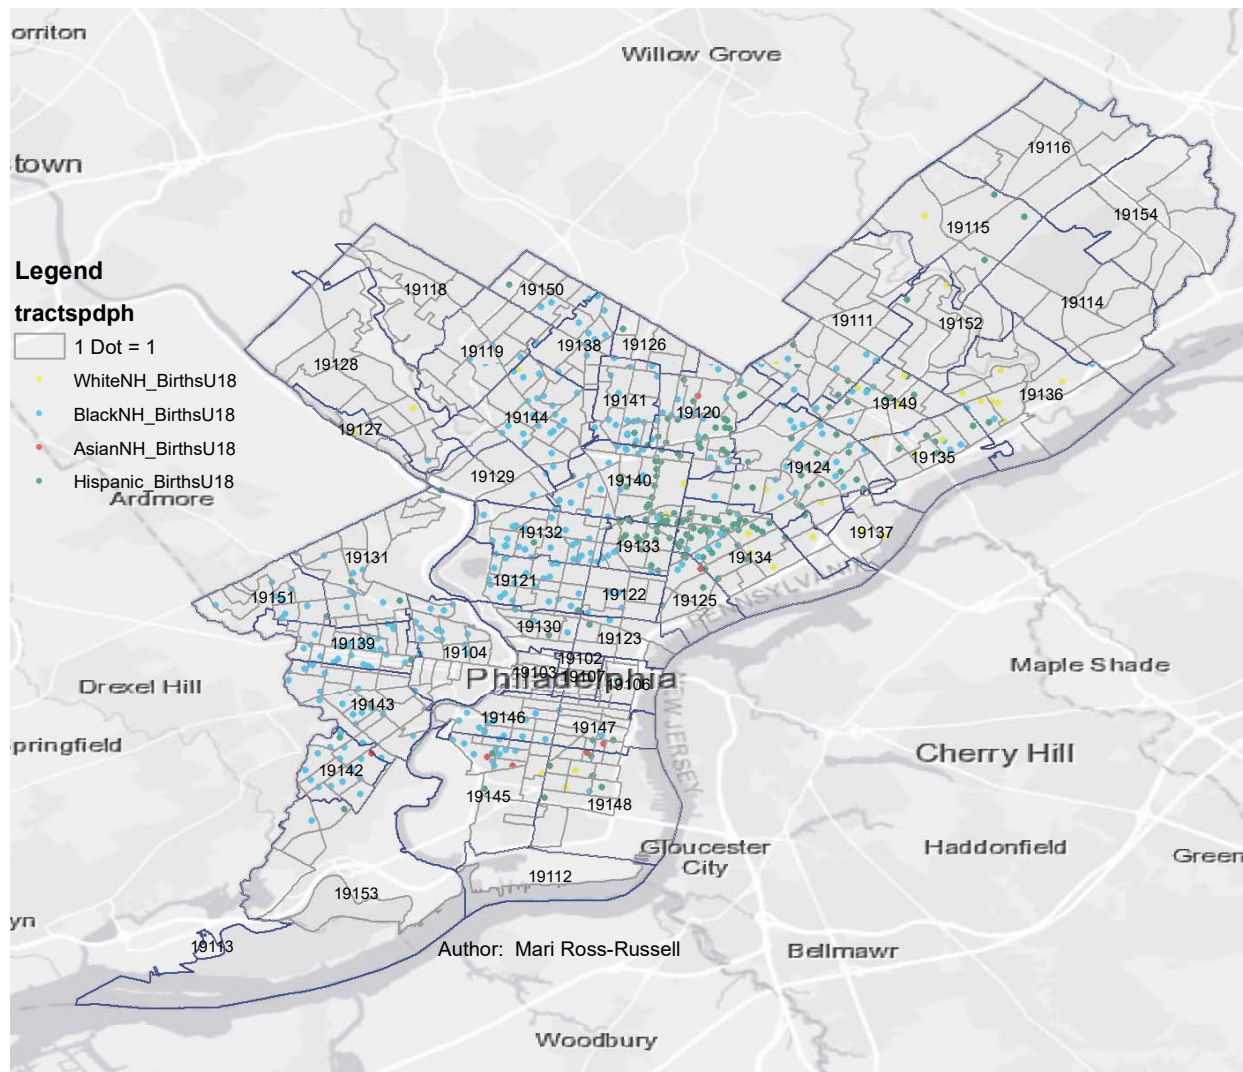

Figure 34. is a dot density map which represents all the infants born to mothers less than 18 years of age in 2014 by race or ethnicity. The Vital Status Events by Census Tract – Supplemental Tables can be found at the following location for more detailed information <http://www.phila.gov/health/commissioner/VitalStatistics.html>. There was a total of 547 live births to women under 18 years of age as of year-end 2014. Of that total 32 were White non-Hispanic (yellow dot), 311 were Black non-Hispanic (turquoise dot), 7 were Asian non-Hispanic (red dot) and 168 were Hispanic (green dot). There were 29 other for race that were not included. The map above is broken out by census tracts which are outlined in grey with the zip codes outlined in dark blue. The map in the figure was generated using ArcMap 10.5.1.

Figure 37. Percentage of the Total Male Population within Philadelphia County at or below 100% Federal Poverty Level by Census Tract, 2015 (ACS 5yr S1701)

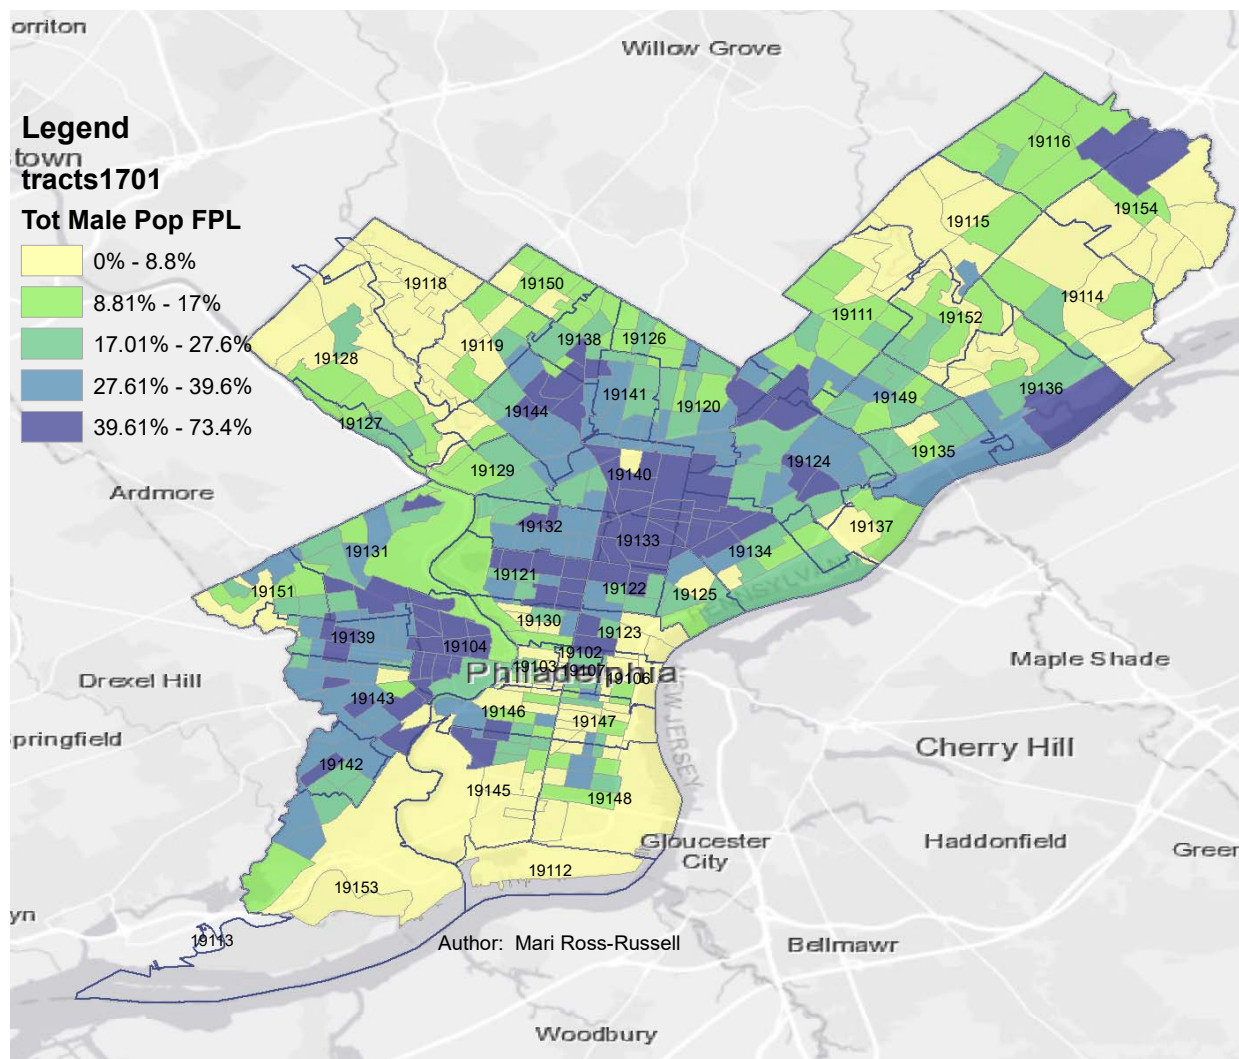

Figure 37 provides a visual of the portion of the male population who are living at or below 100% of the federal poverty level in Philadelphia County by the end of 2015. The five groupings are quintile based and the total number of census tracts are equally divided among the groups. Census tracts are population density based. The wider the dispersion of the population the larger the geographic area within a census tract. The more densely populated the area the smaller the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey and zip code in dark blue. The lowest percentage grouping is 0% - 8.8%, then 8.81% - 17% is second, 17.01% to 27.6% is third, 27.61% - 39.6% is fourth and 39.61% to 73.4% represents the last percentage grouping.

The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

Figure 38. Percentage of Total Female Householders, No Husband Present, with related Children Under 18 at or Below the Federal Poverty Level in Philadelphia County by Census Tract, 2015 (ACS 5yr DP03)

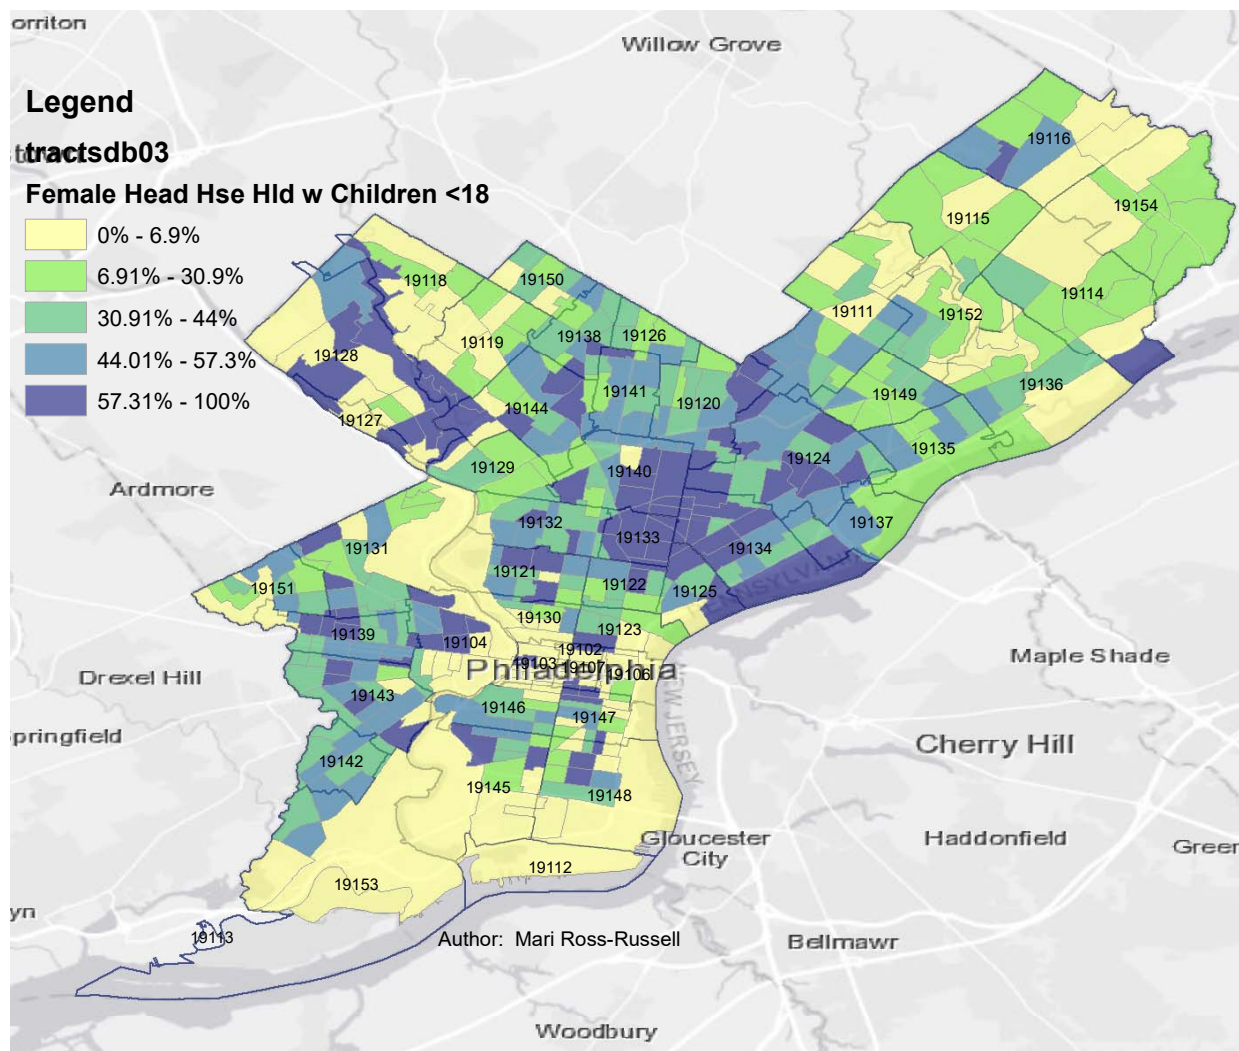

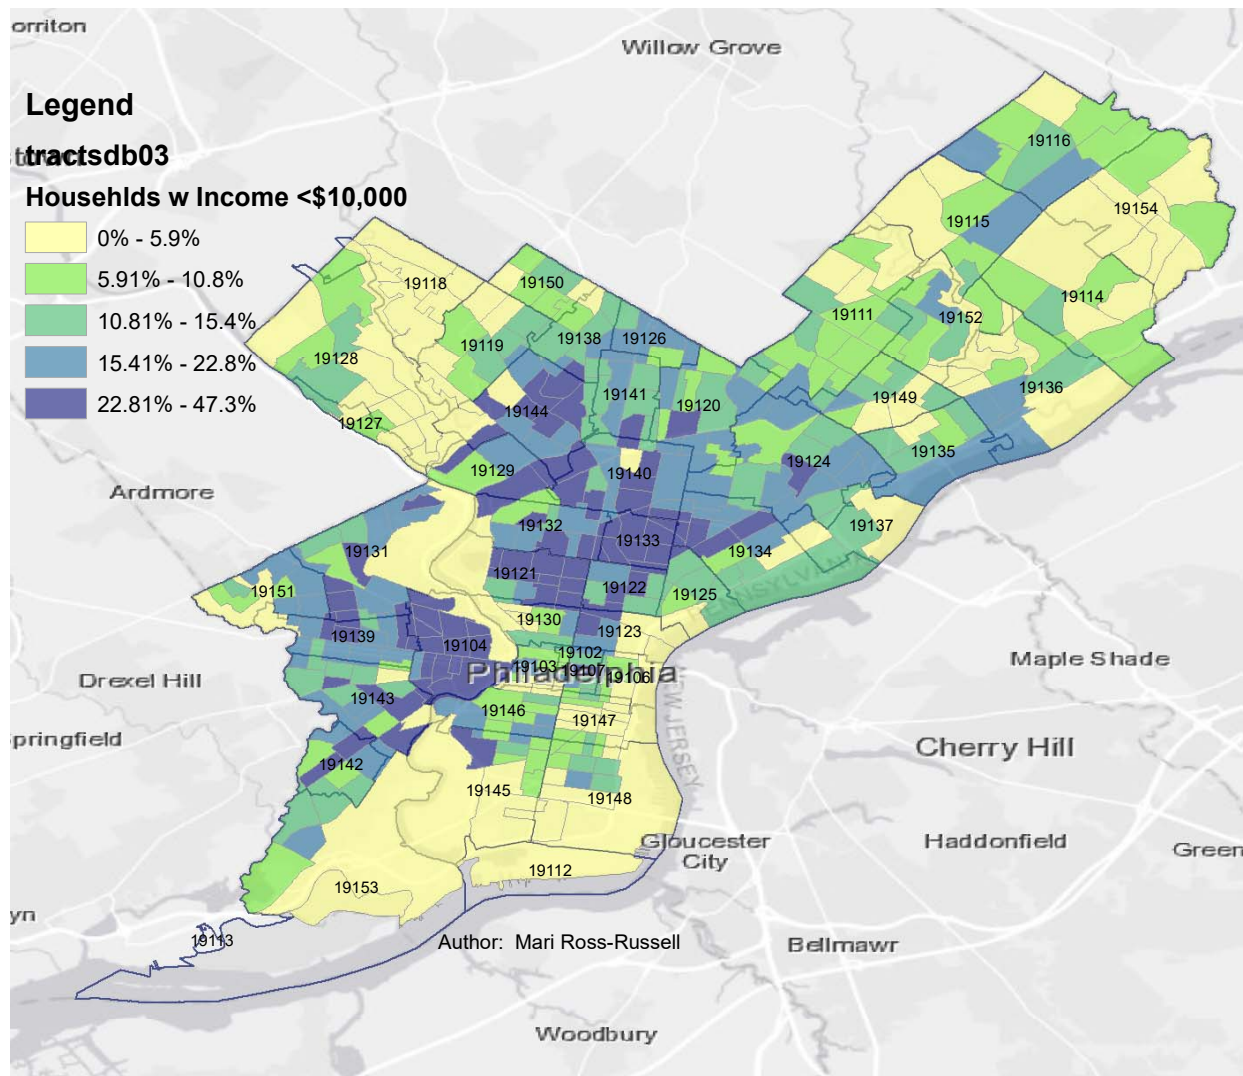

Figure 38. shows the female headed households with no husband present in the home with related children under the age of 18 living at or below 100% of the federal poverty level in Philadelphia County by census tract. (Unfortunately, there was not a measure for male headed household no wife present.) There are five groupings which are quintile based. This means the total number of census tracts are equally divided among the groups. The wider the dispersion of the population the larger the geographic area within a census tract. This explains why the census tracts are different sizes. The more densely populated the area the smaller the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey. The lowest percentage grouping is 0% - 6.9%, then 6.91% - 30.9% is second, 30.91% to 44% is third, 44.01% - 57.3% is fourth and 57.31% to 100% represents the last percentage grouping.

The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table DP03.

Figure 39. Percentage of the Total Households in Philadelphia County with an Income of Less than \$10,000 per Year by Census Tract, 2015 (ACS 5yr DP03)

The following series of maps, Figures 39 through 48 show household income, in inflation adjusted dollars, broken out at various levels from less than \$10,000 per year up to \$200,000 and above. In each map the five categories or groupings start with the lightest color and lowest percentage and gradually increase to the highest percentage and darkest color. The five groupings are quintile based. This means the total number of census tracts are equally divided among the groups, there are a total of 384 census tracts in Philadelphia County and each group would have 76 or 77 tracts. Census tracts are population density based. The wider the dispersion of the population the larger the geographic area within a census tract. This explains why the census tracts are different sizes. The more densely populated the area the smaller the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey. Many of the cities in Philadelphia and the surrounding counties have been included to act as points of reference. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table DP03.

Figure 40. Percentage of the Total Households in Philadelphia County with an Income of \$10,000 to \$14,999 per Year by Census Tract, 2015 (ACS 5yr DP03)

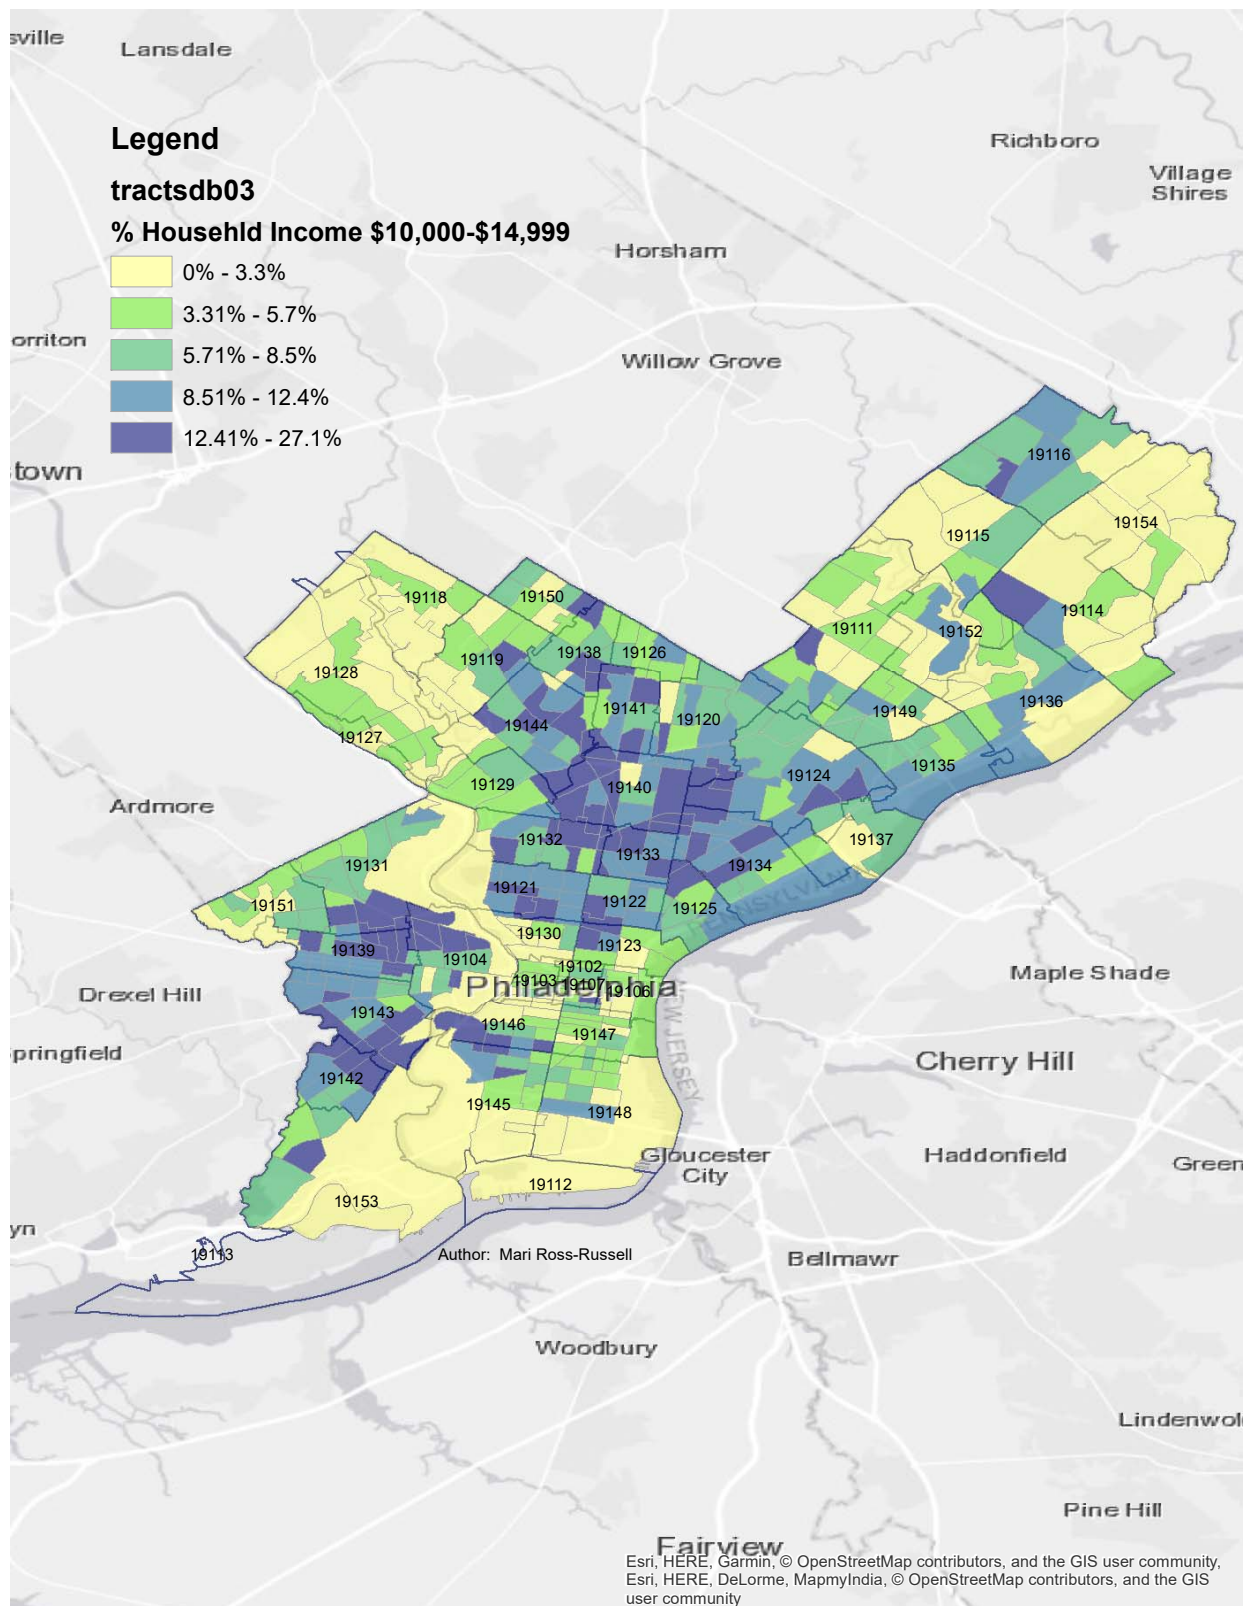

Figure 41. Percentage of the Total Households in Philadelphia County with an Income of \$15,000 to \$24,999 per Year by Census Tract, 2015 (ACS 5yr DP03)

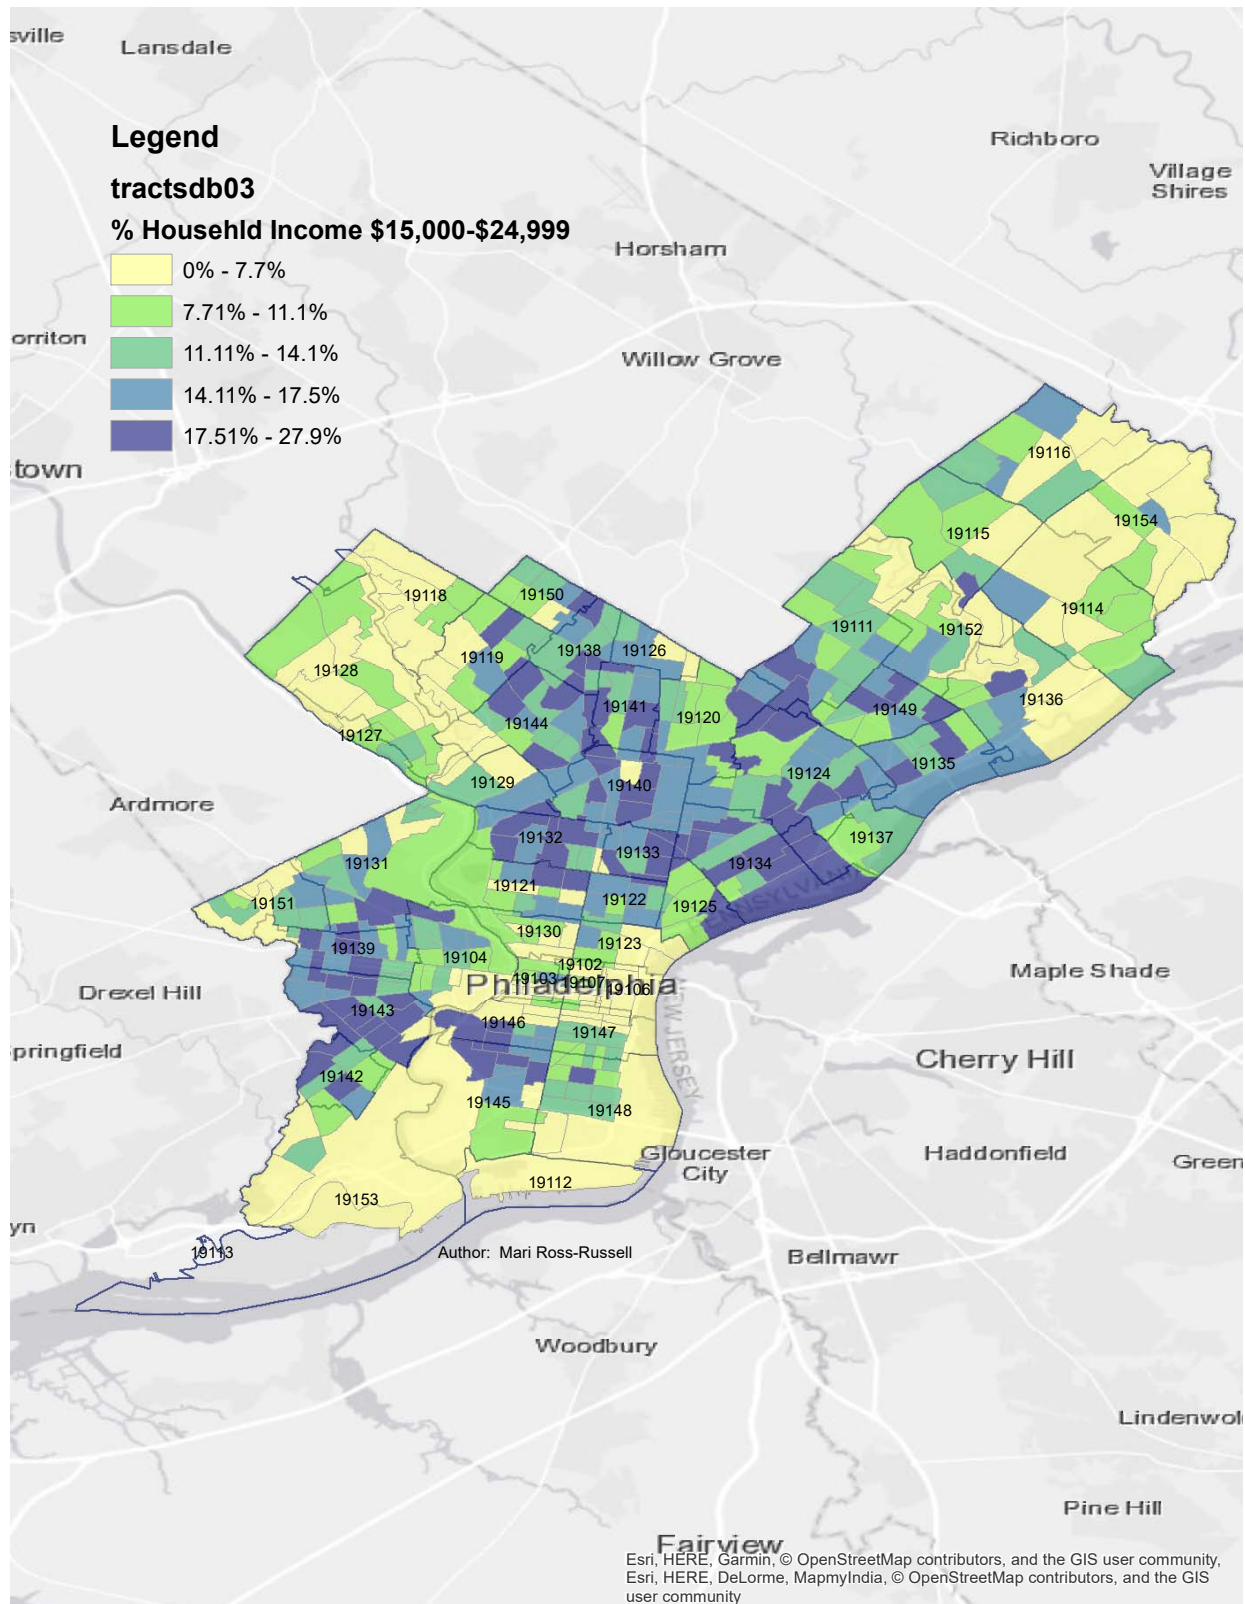

Figure 42. Percentage of the Total Households in Philadelphia County with an Income of \$25,000 to \$34,999 per Year by Census Tract, 2015 (ACS 5yr DP03)

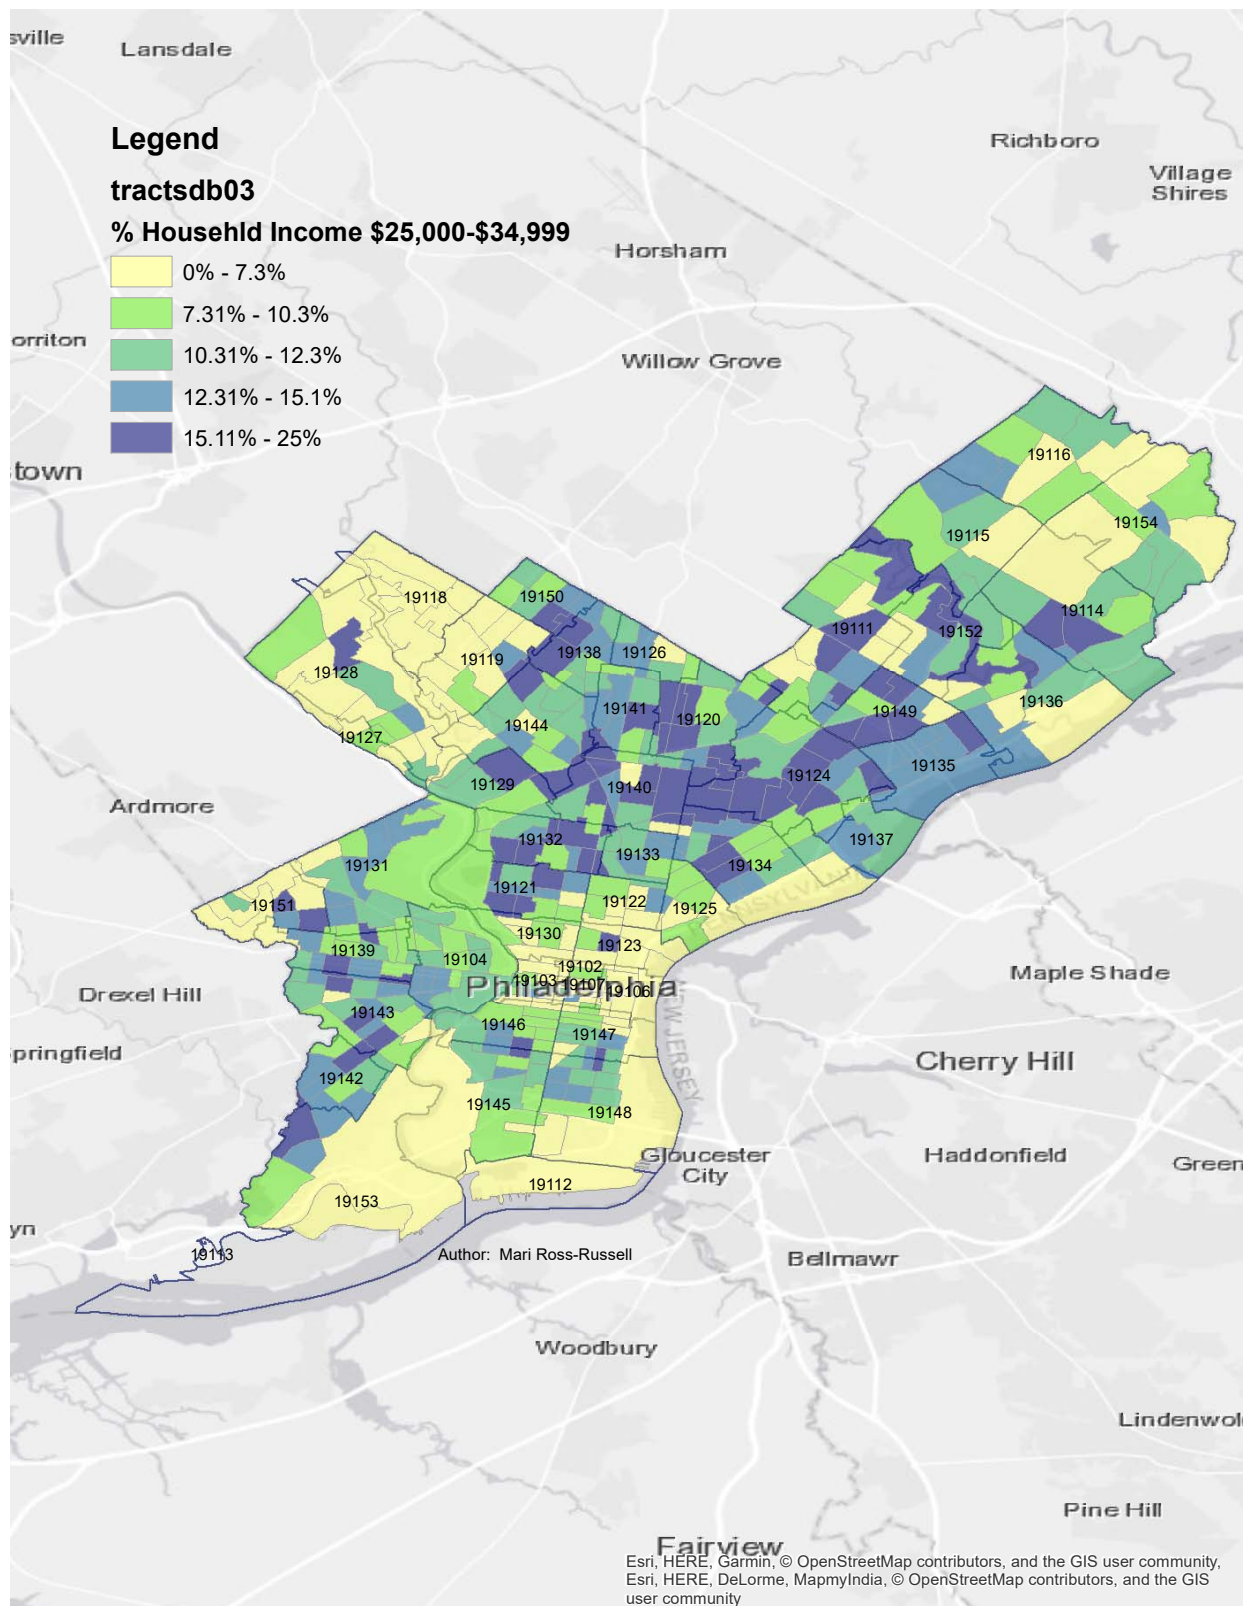

Figure 43. Percentage of the Total Households in Philadelphia County with an Income of \$35,000 to \$49,999 per Year by Census Tract, 2015 (ACS 5yr DP03)

Please note: one tract with 100% is skewing the total higher, the highest percentage grouping should be 17.01 - 27.1%.

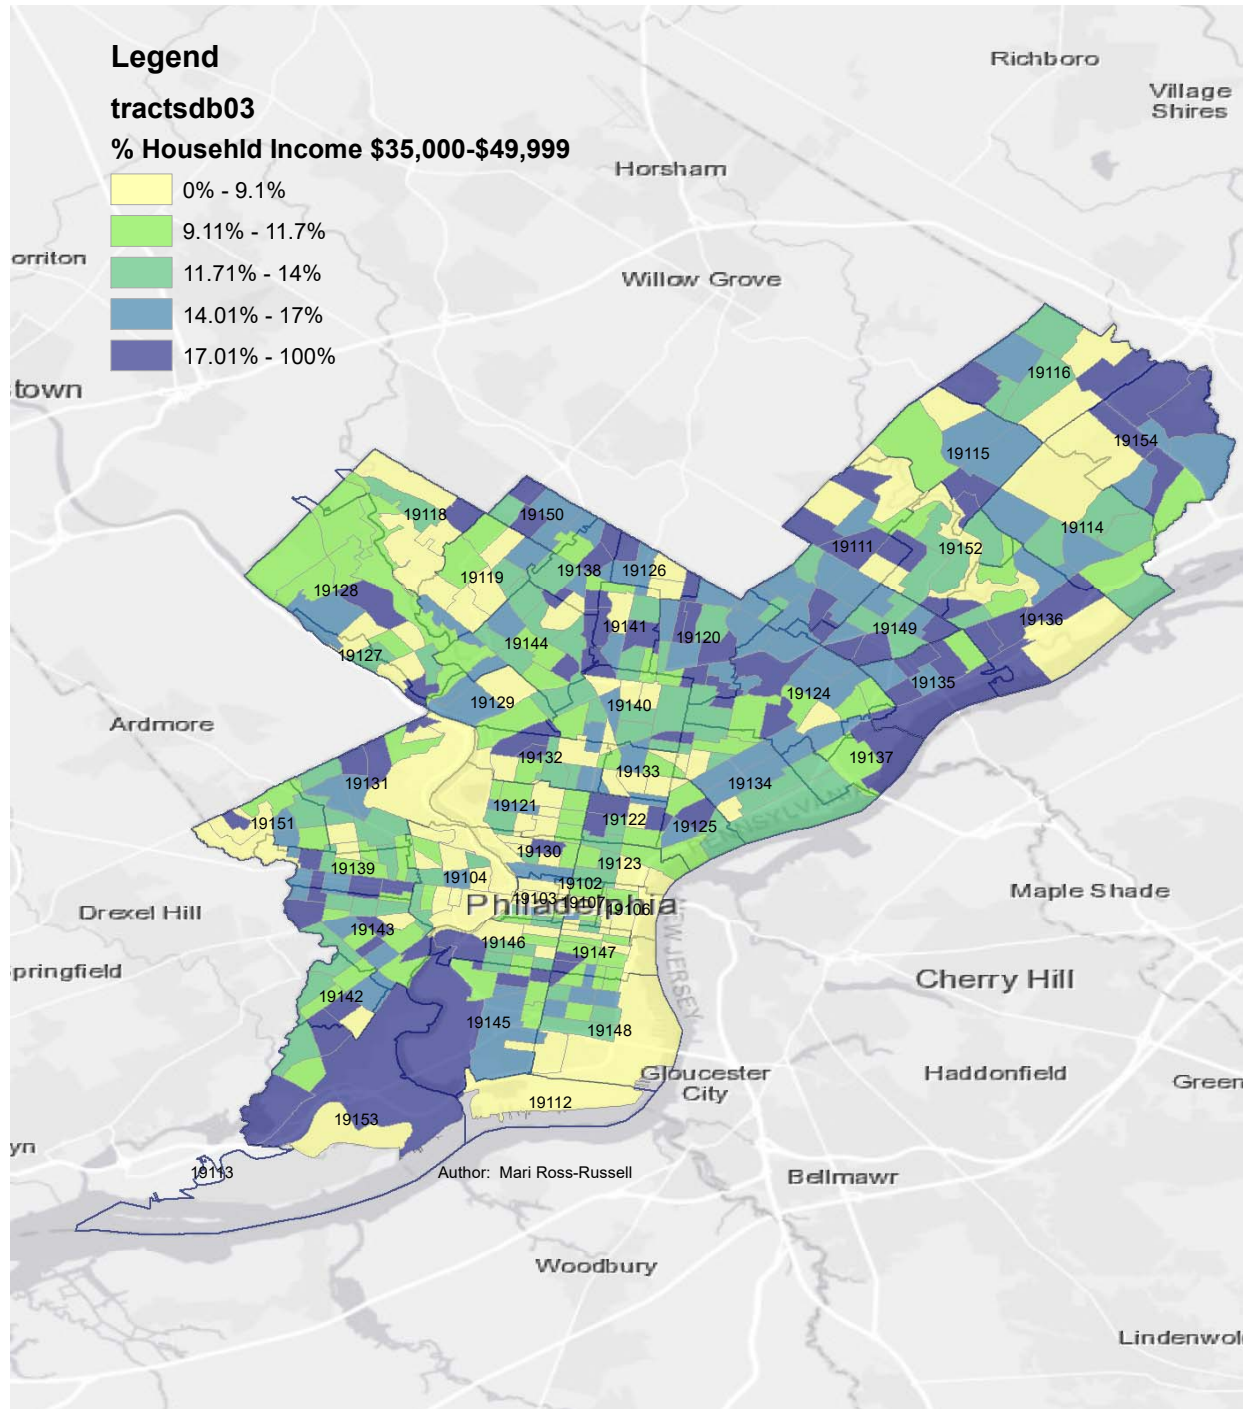

Figure 44. Percentage of the Total Households in Philadelphia County with an Income of \$50,000 to \$74,999 per Year by Census Tract, 2015 (ACS 5yr DP03)

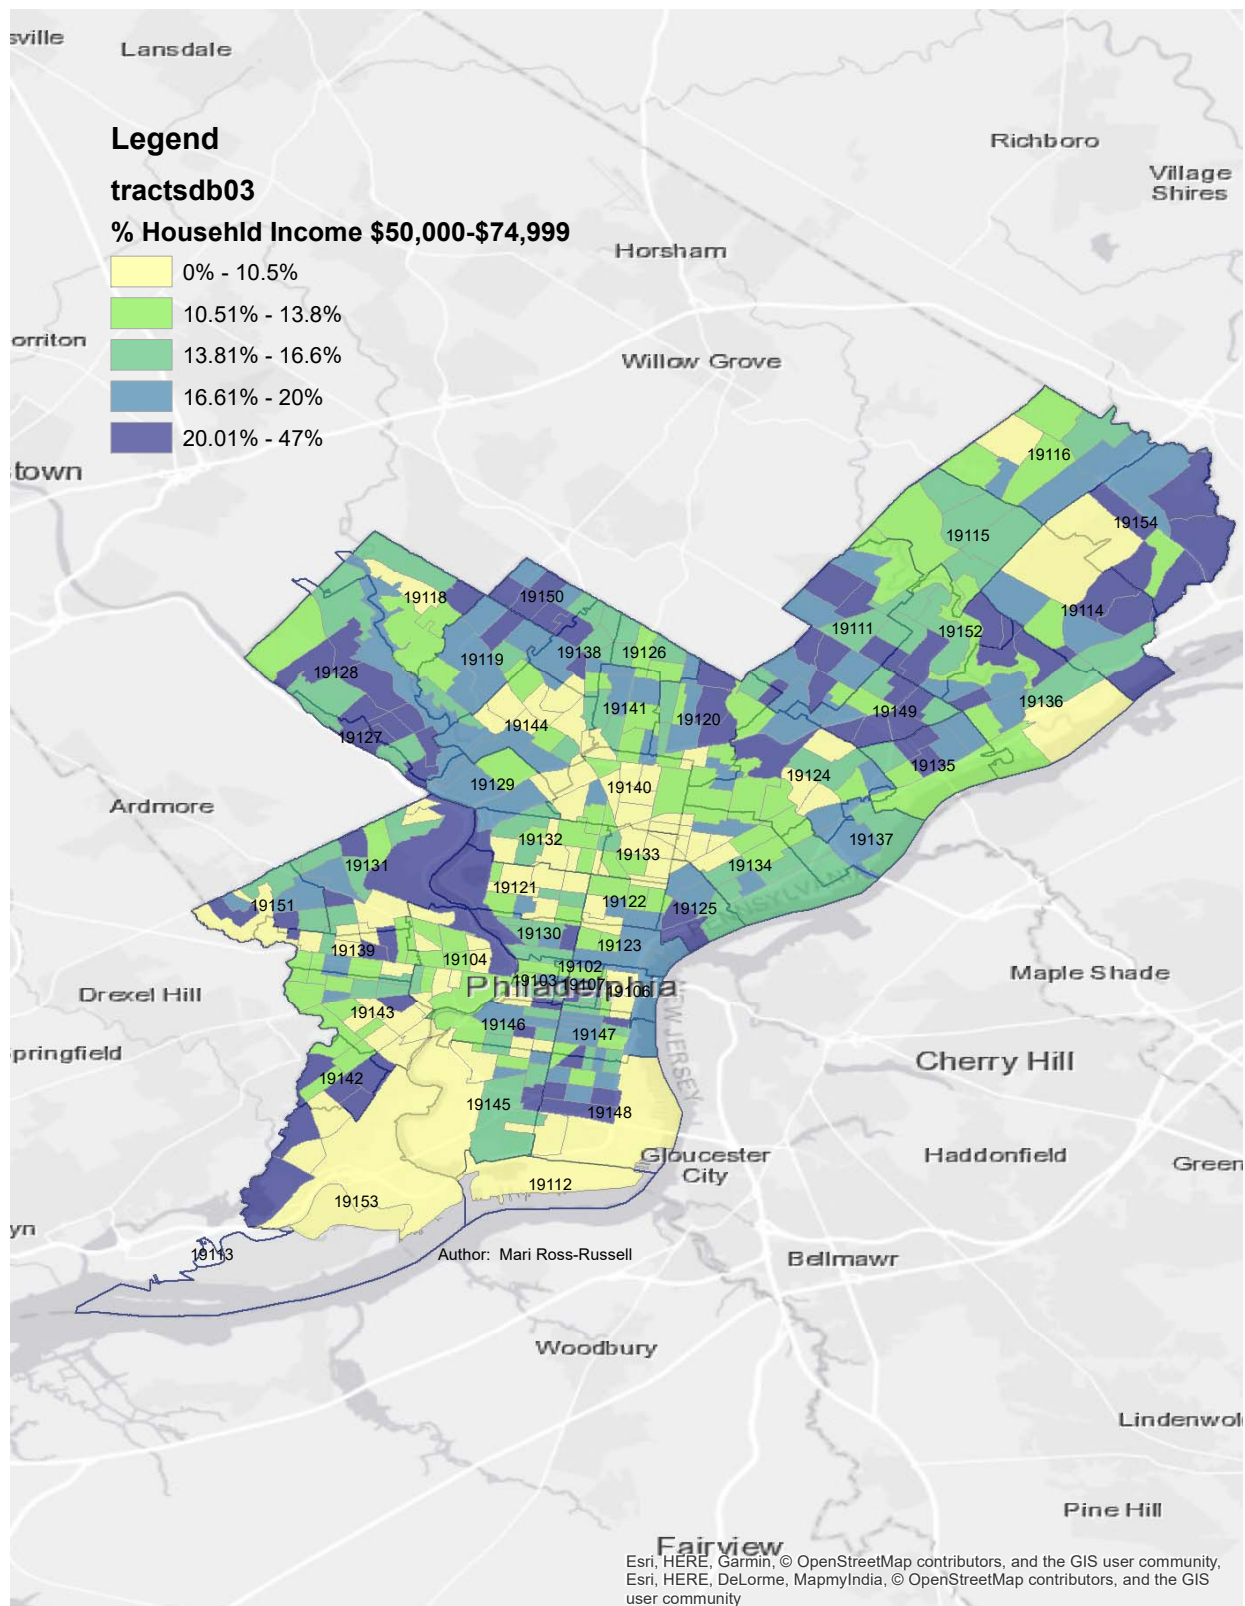

Figure 45. Percentage of the Total Households in Philadelphia County with an Income of \$75,000 to \$99,999 per Year by Census Tract, 2015 (ACS 5yr DP03)

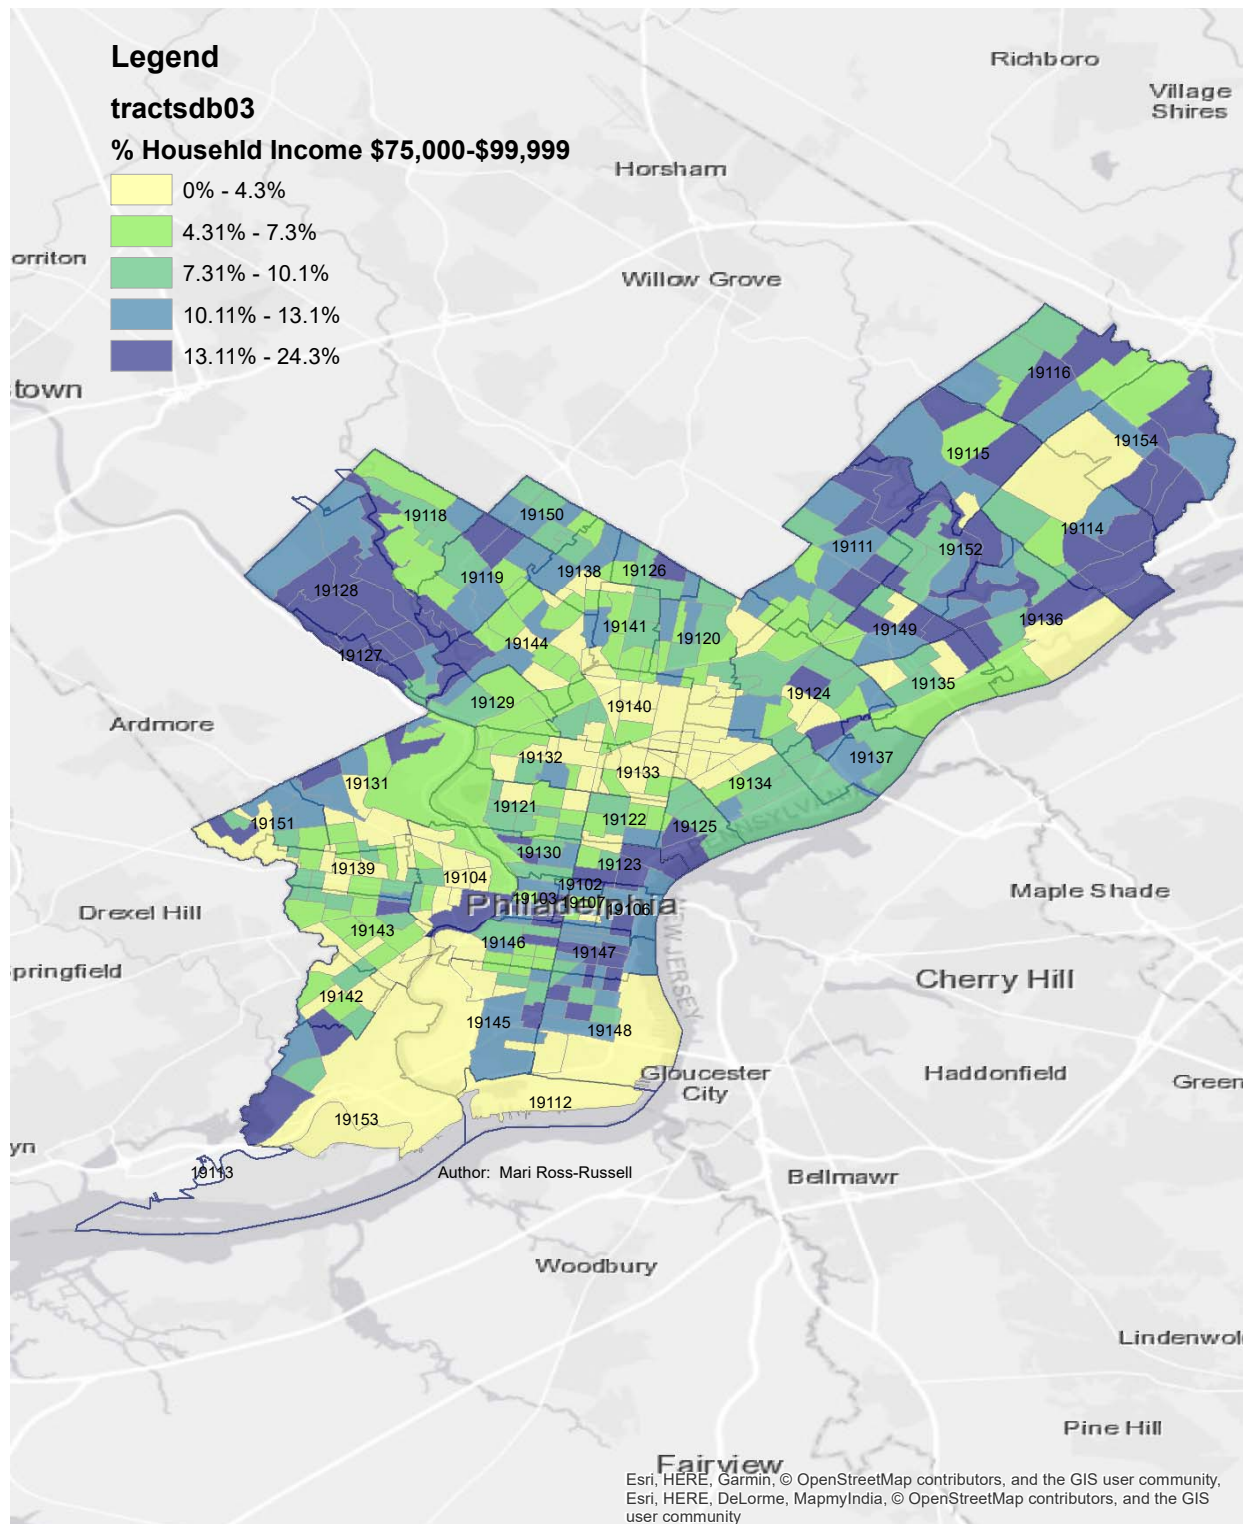

Figure 46. Percentage of the Total Households in Philadelphia County with an Income of \$100,000 to \$149,999 per Year by Census Tract, 2015 (ACS 5yr DP03)

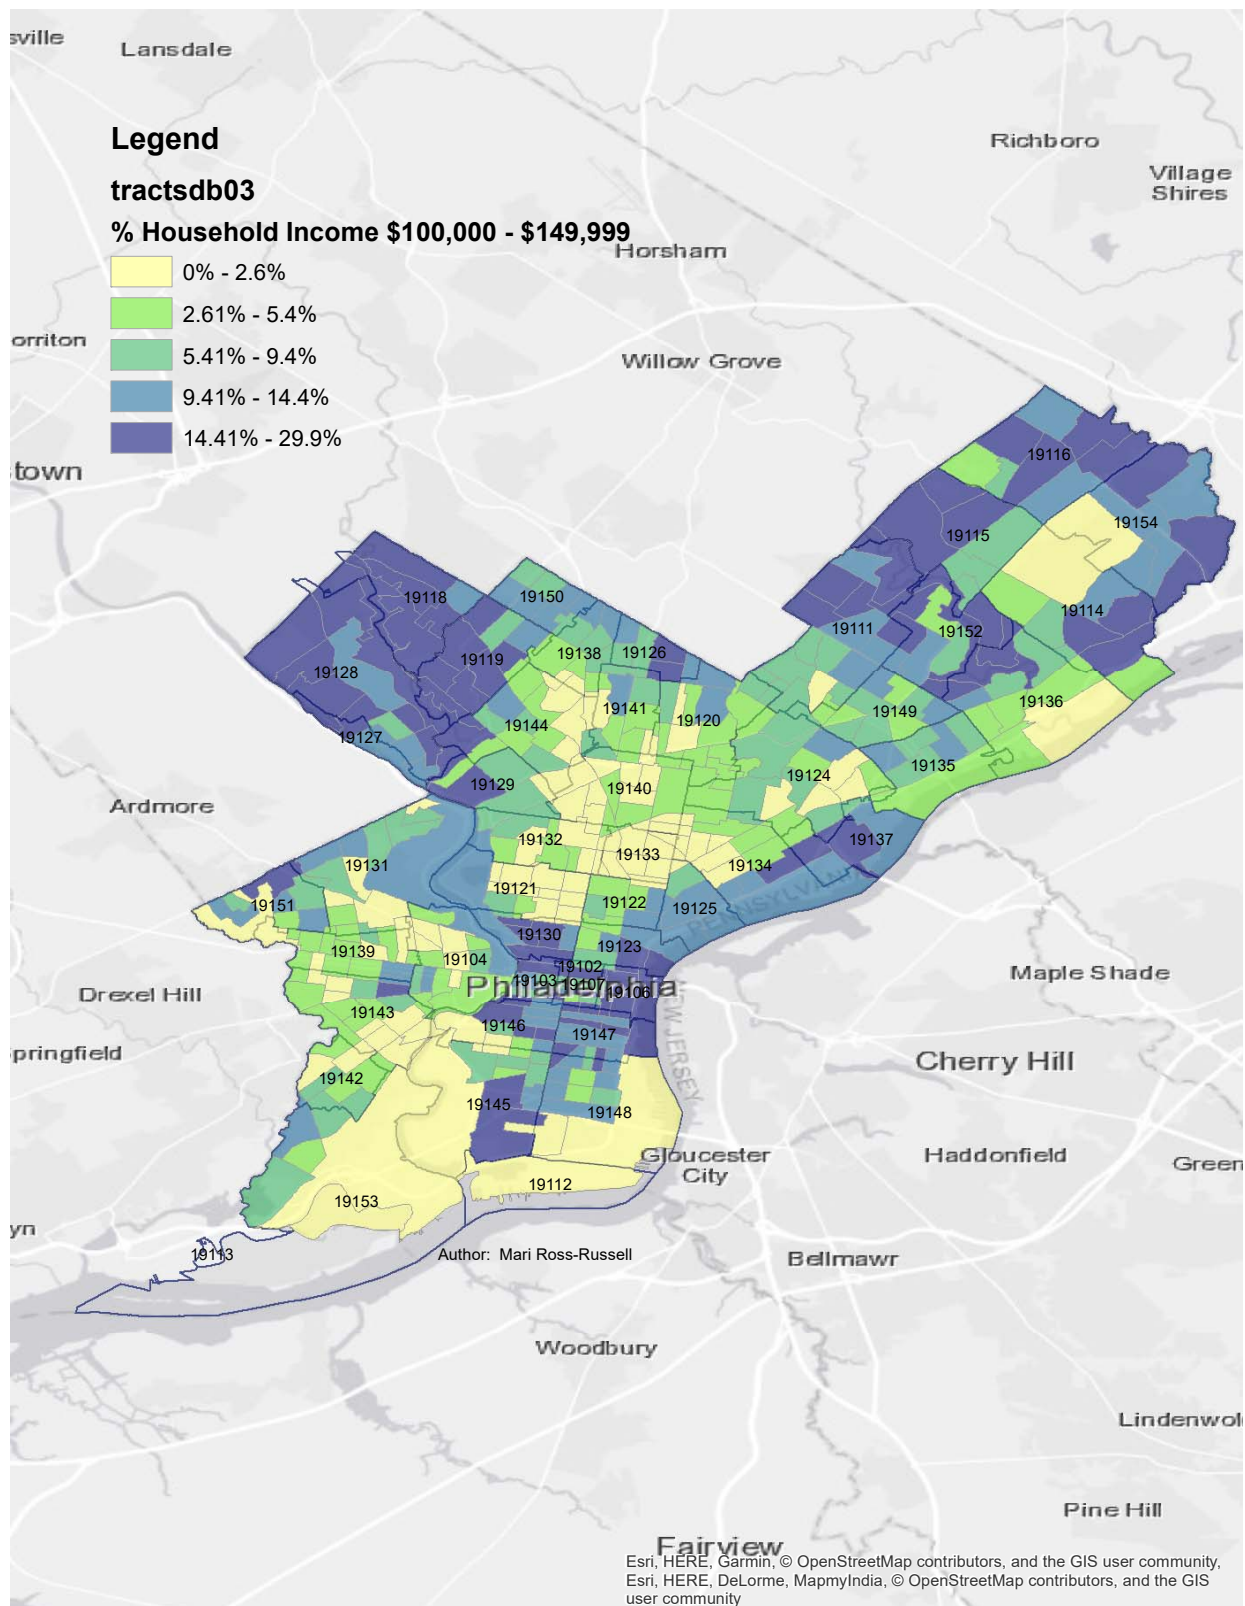

Figure 47. Percentage of the Total Households in Philadelphia County with an Income of \$150,000 to \$199,999 per Year by Census Tract, 2015 (ACS 5yr DP03)

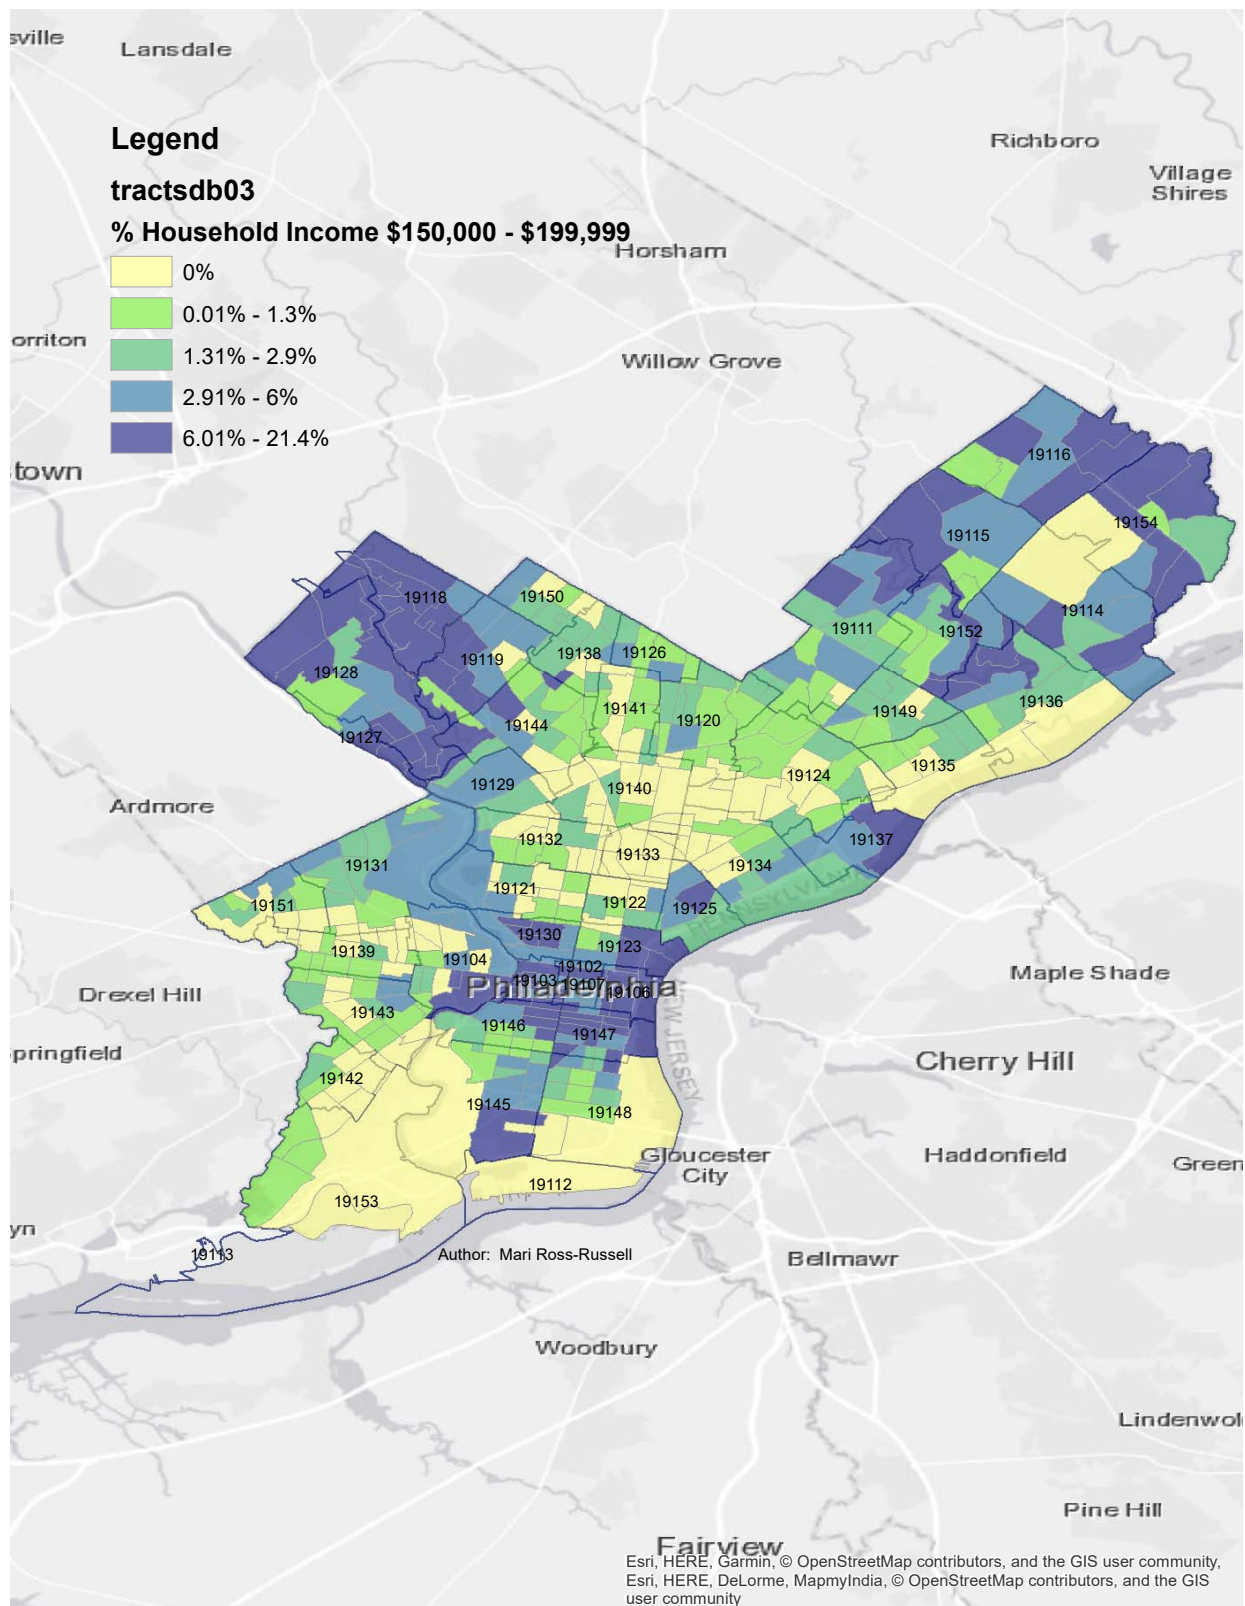

Figure 48. Percentage of the Total Households in Philadelphia County with an Income of \$200,000 or more per Year by Census Tract, 2015 (ACS 5yr DP03)

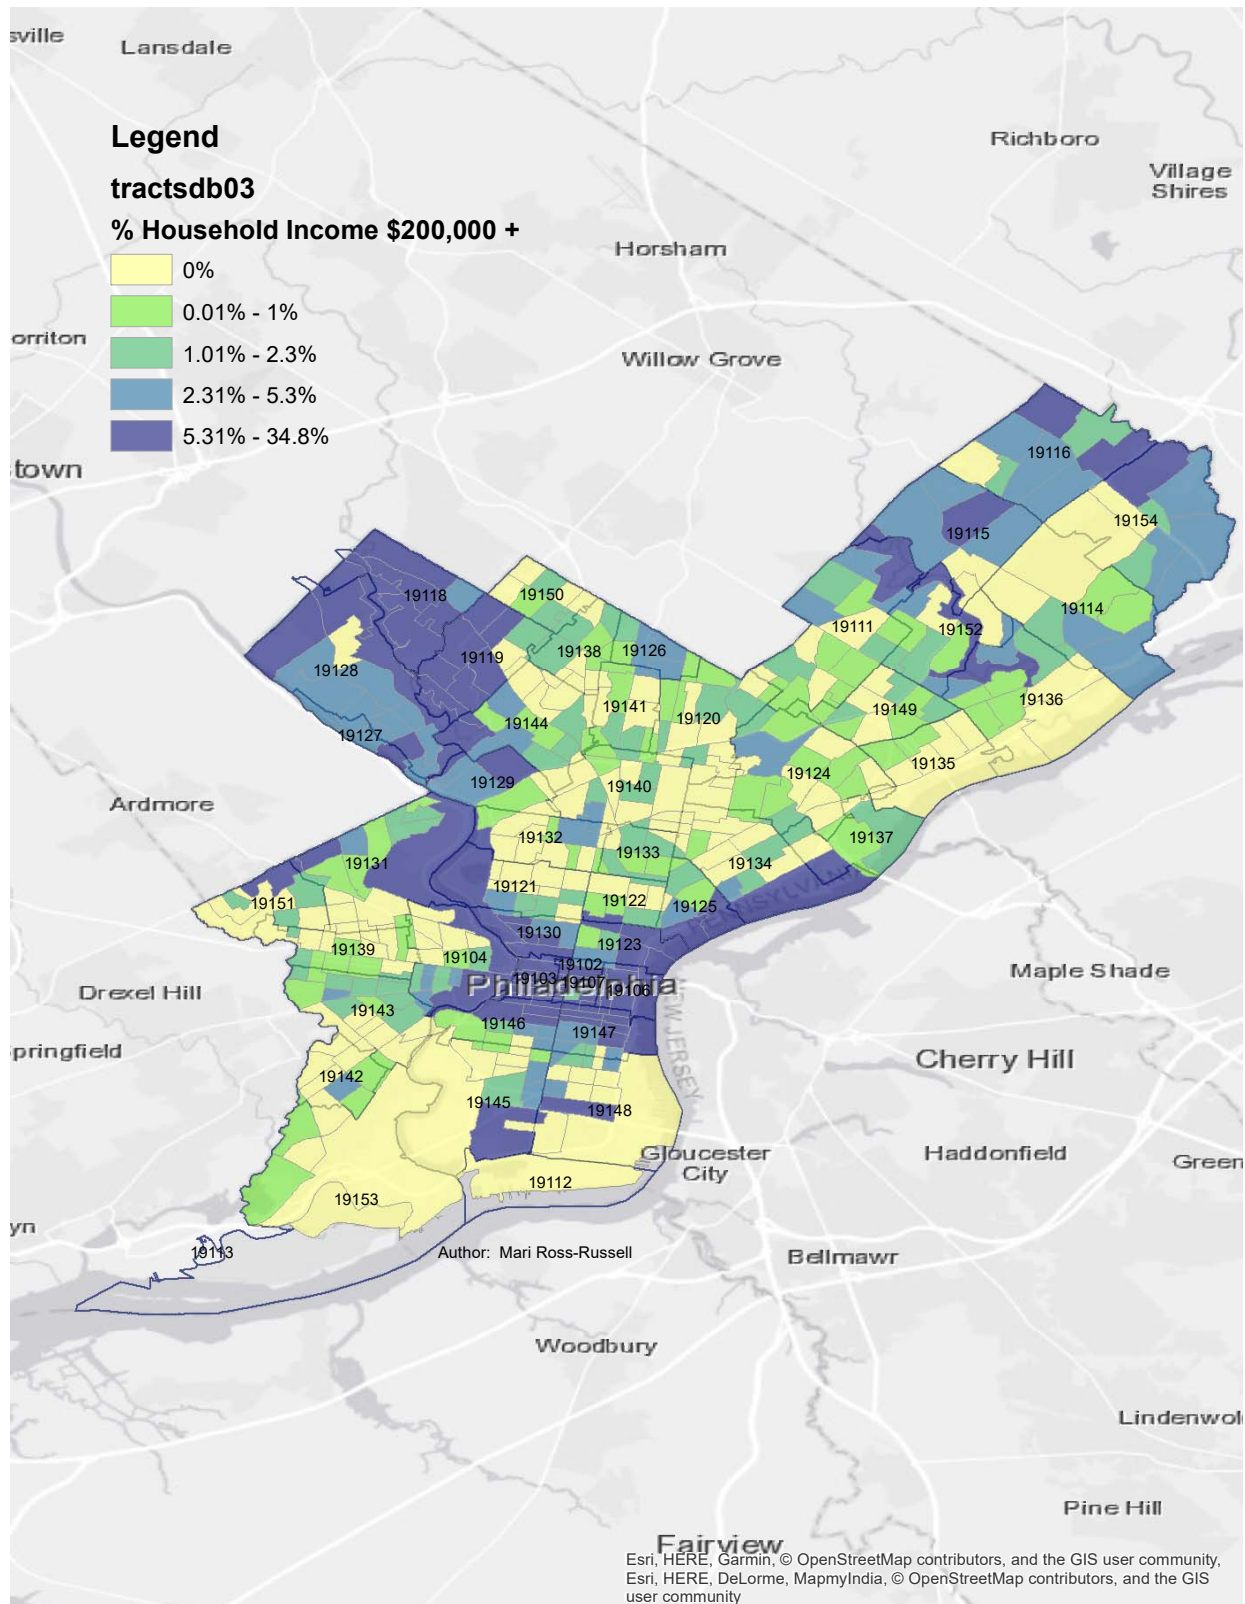

Figure 49. Total Households in Philadelphia County by Median Income per Year in 2015 Inflation Adjusted Dollars by Census Tract, 2015 (ACS 5yr DP03)

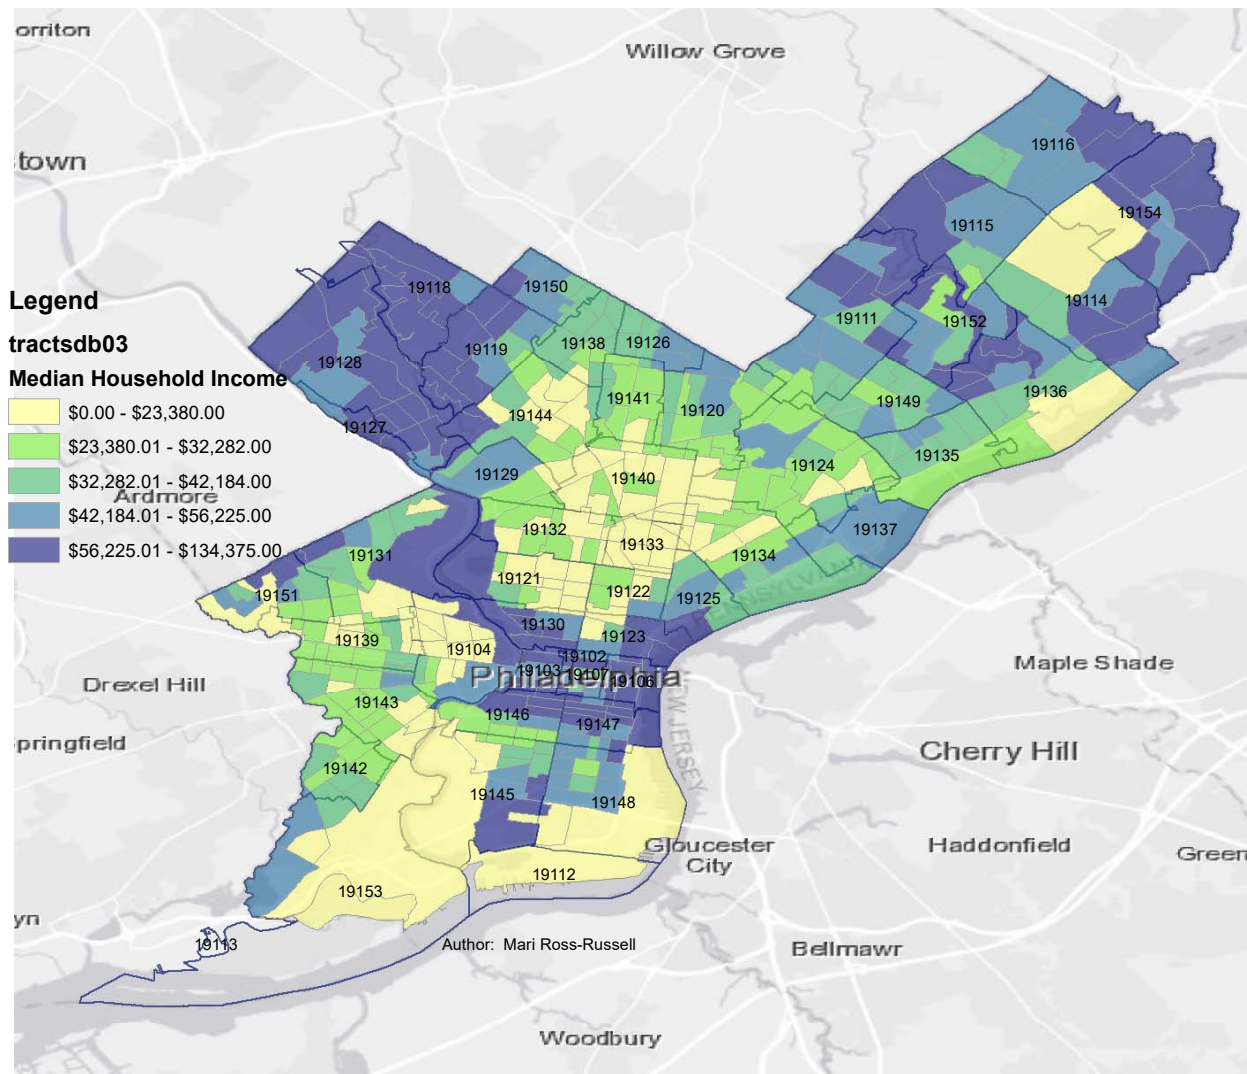

Figure 49. represents the median or mid-point (the exact middle of the range of incomes) income in 2015 inflation adjusted dollars by household and census tract in Philadelphia County. The five categories or groupings shown in the legend of the map start with the lightest color and lowest amount and gradually increases to the highest median income and darkest color. (Please note: there are a few census tracts that have zero population.) The five groupings are quintile based. Census tracts are population density based. The wider the dispersion of the population the larger the geographic area within a census tract. This explains why the census tracts are different sizes. The more densely populated the area the smaller the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table DP03.

Figure 50. Total Households in Philadelphia County by Mean (Average) Income per Year in 2015 Inflation Adjusted Dollars by Census Tract, 2015 (ACS 5yr DP03)

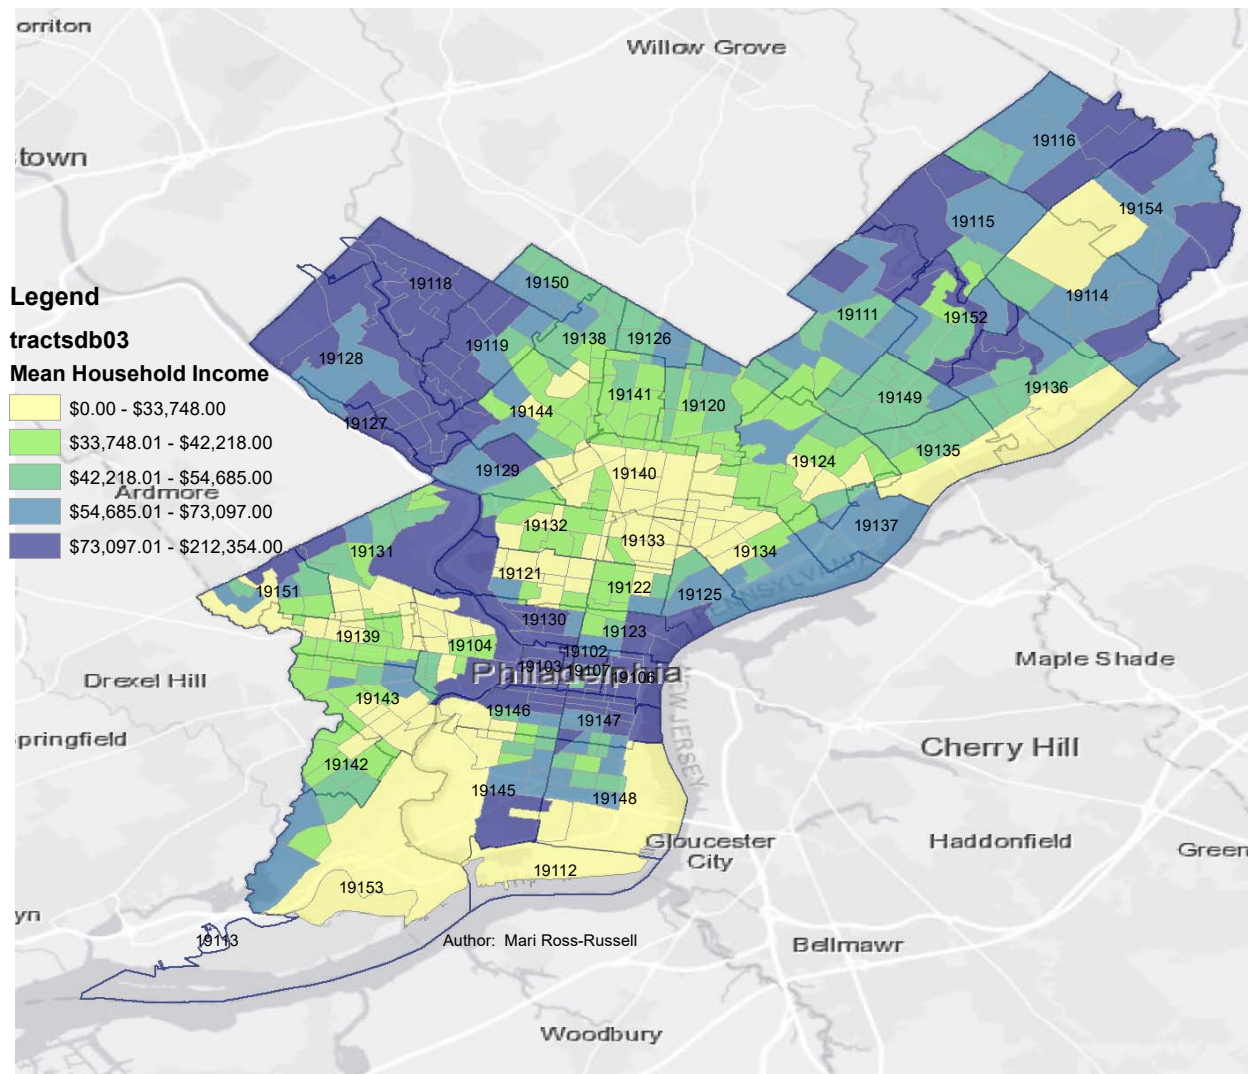

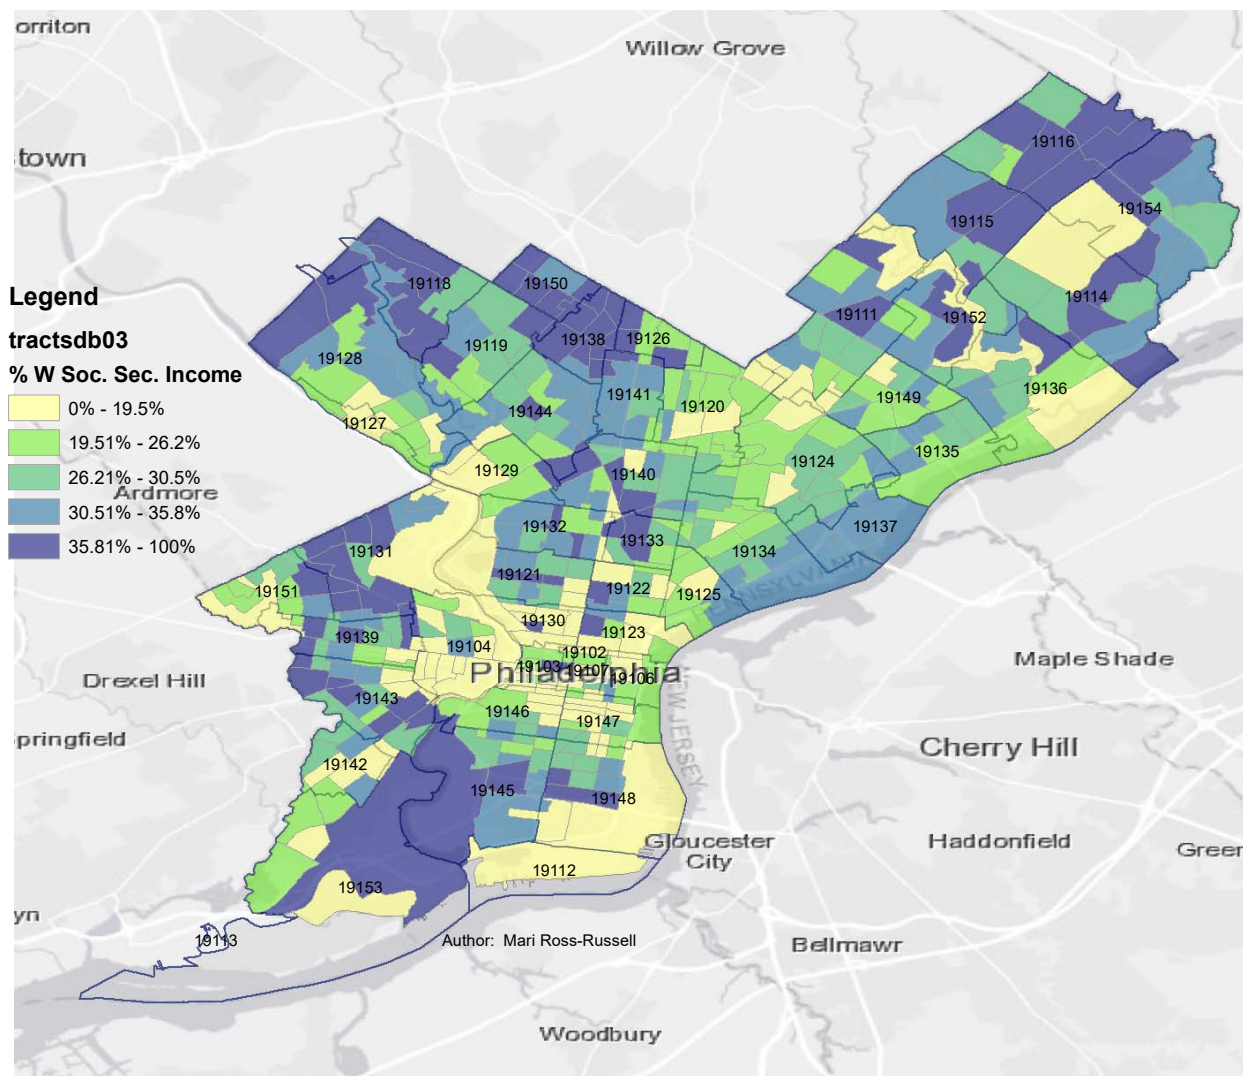

Figure 50. shows the mean or averaged income in 2015 inflation adjusted dollars by household and census tract in Philadelphia County. In the map above, the five categories or groupings start with the lightest color and lowest amount and gradually increases to the highest mean income and darkest color. (Please note: there are a few census tracts that have zero population.) The five groupings are quintile based. This means the total number of census tracts are equally divided among the groups. Census tracts are population density based. The wider the dispersion of the population the larger the geographic area within a census tract. This explains why the census tracts are different sizes. The more densely populated the area the smaller the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table DP03.

Figure 51. Percentage of Total Households in Philadelphia County receiving Social Security Income in 2015 Inflation Adjusted Dollars by Census Tract, 2015 (ACS 5yr DP03)

Figures 51. and 52. focus on social security, the percentage of households receiving the benefit and the mean or averaged income in 2015 inflation adjusted dollars by census tract in Philadelphia County. In these maps the five categories or groupings start with the lightest color and lowest amount and gradually increases to the highest percentage or income and darkest color. (Please note: there are a few census tracts that have zero population and one tract with a very small number of residents, all of whom meet these criteria.) The lowest percentage of households receiving social security income (Figure 51) are 0% - 19.5%. The highest percentage of households in a census tract receiving social security is between 35.81% and 100% and the highest mean or averaged income benefit is \$47,240 at year end in 2015. The five groupings are quintile based. This means the total number of census tracts are equally divided among the groups. The map above is broken out by census tracts which are outlined in grey and zip codes in dark blue. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table DP03.

Figure 52. Total Households in Philadelphia County receiving Social Security Income by Mean (Average) Benefit in 2015 Inflation Adjusted Dollars by Census Tract, 2015 (ACS 5yr DP03)

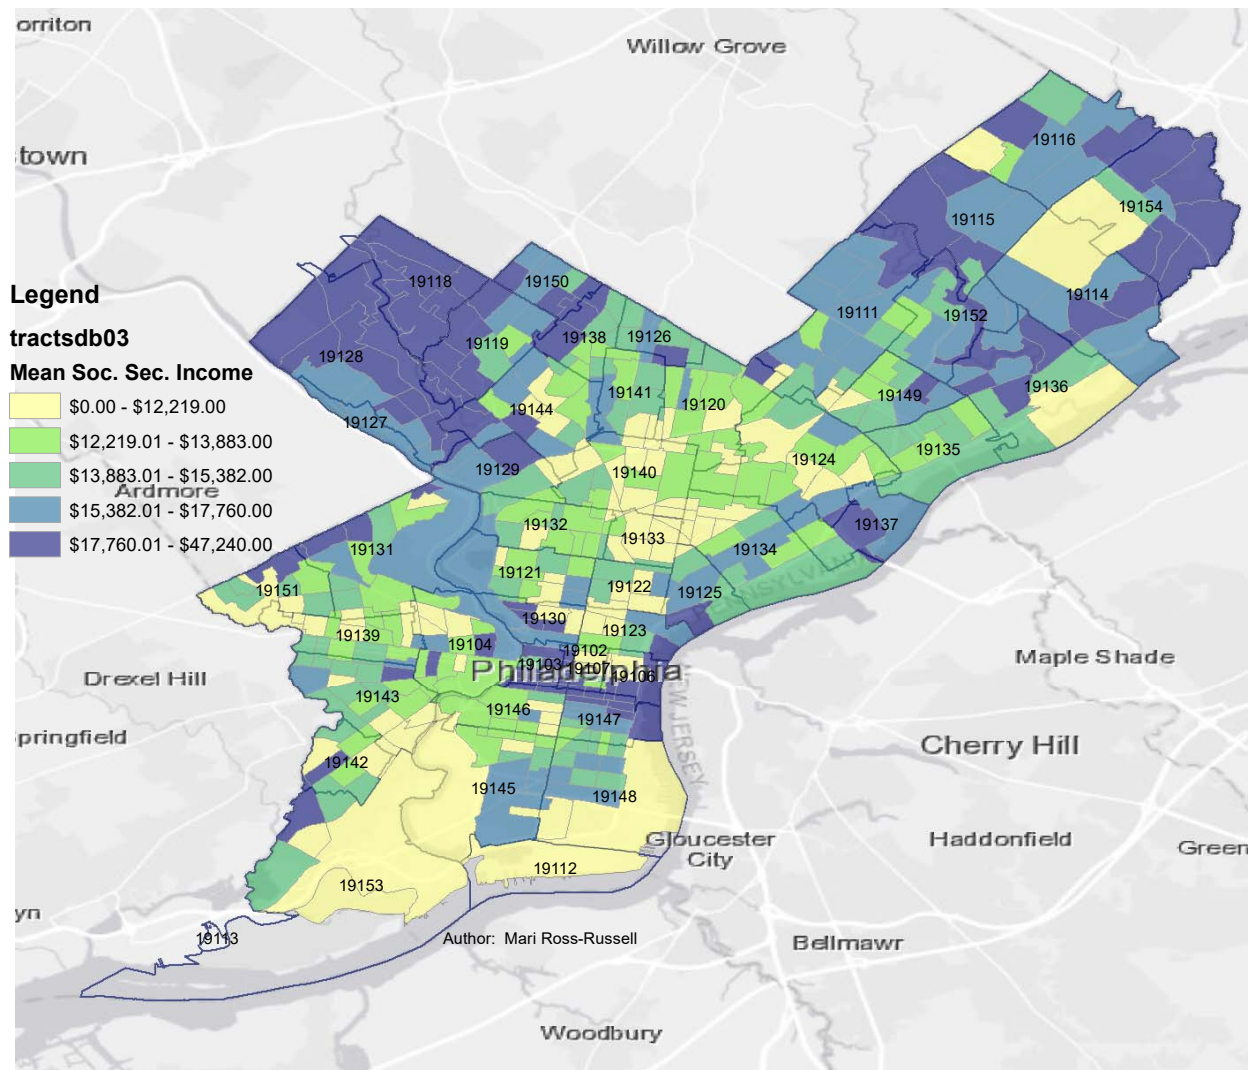

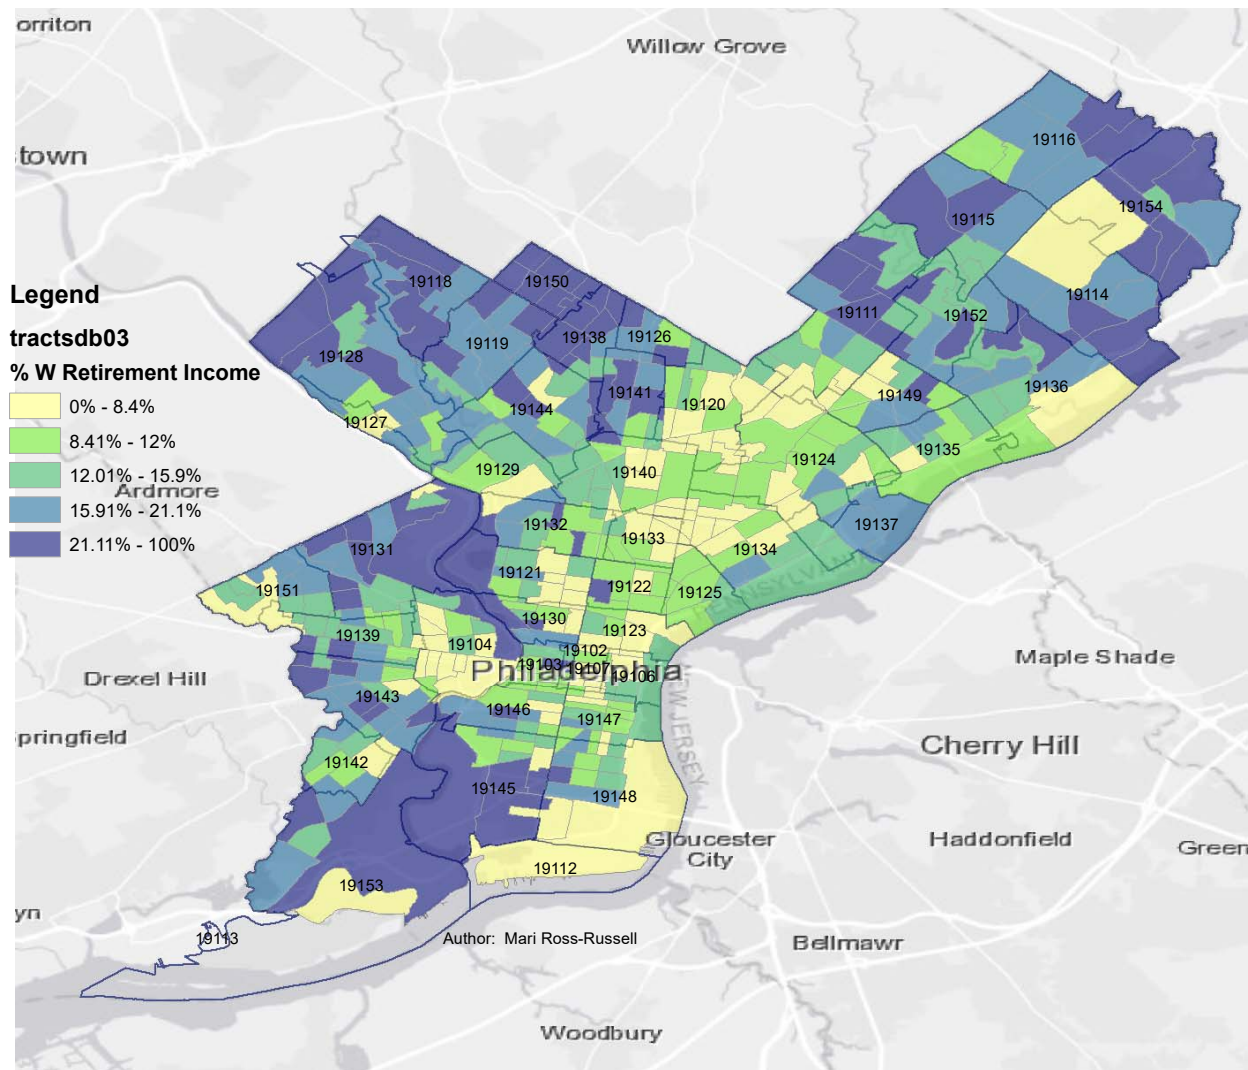

Figure 53. Percentage of Total Households in Philadelphia County receiving Retirement Income in 2015 Inflation Adjusted Dollars by Census Tract, 2015 (ACS 5yr DP03)

Figures 53. and 54. concentrate on retirement income, the percentage of households estimated to be receiving this type of income and the mean or averaged income in 2015 inflation adjusted dollars by census tract in Philadelphia County. In the preceding and following map the five categories or groupings start with the lightest color and lowest amount and gradually increases to the highest percentage or income and darkest color. (Please note: there are a few census tracts that have zero population and one tract with a very small number of residents, all of whom meet these criteria.) The lowest percentage of households receiving retirement income (Figure 53) is 0% to 8.4%. The highest percentage of households in a census tract estimated to receive retirement income is 100% because of a single tract the next percentage is 46.6% and the highest mean or averaged income is \$170,911 at year end in 2015.

The five groupings are quintile based. This means the total number of census tracts are equally divided among the groups. The map above is broken out by census tracts which are outlined in grey, zip codes in dark blue. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table DP03.

Figure 54. Total Households in Philadelphia County receiving Retirement Income by Mean (Average) Benefit in 2015 Inflation Adjusted Dollars by Census Tract, 2015 (ACS 5yr DP03)

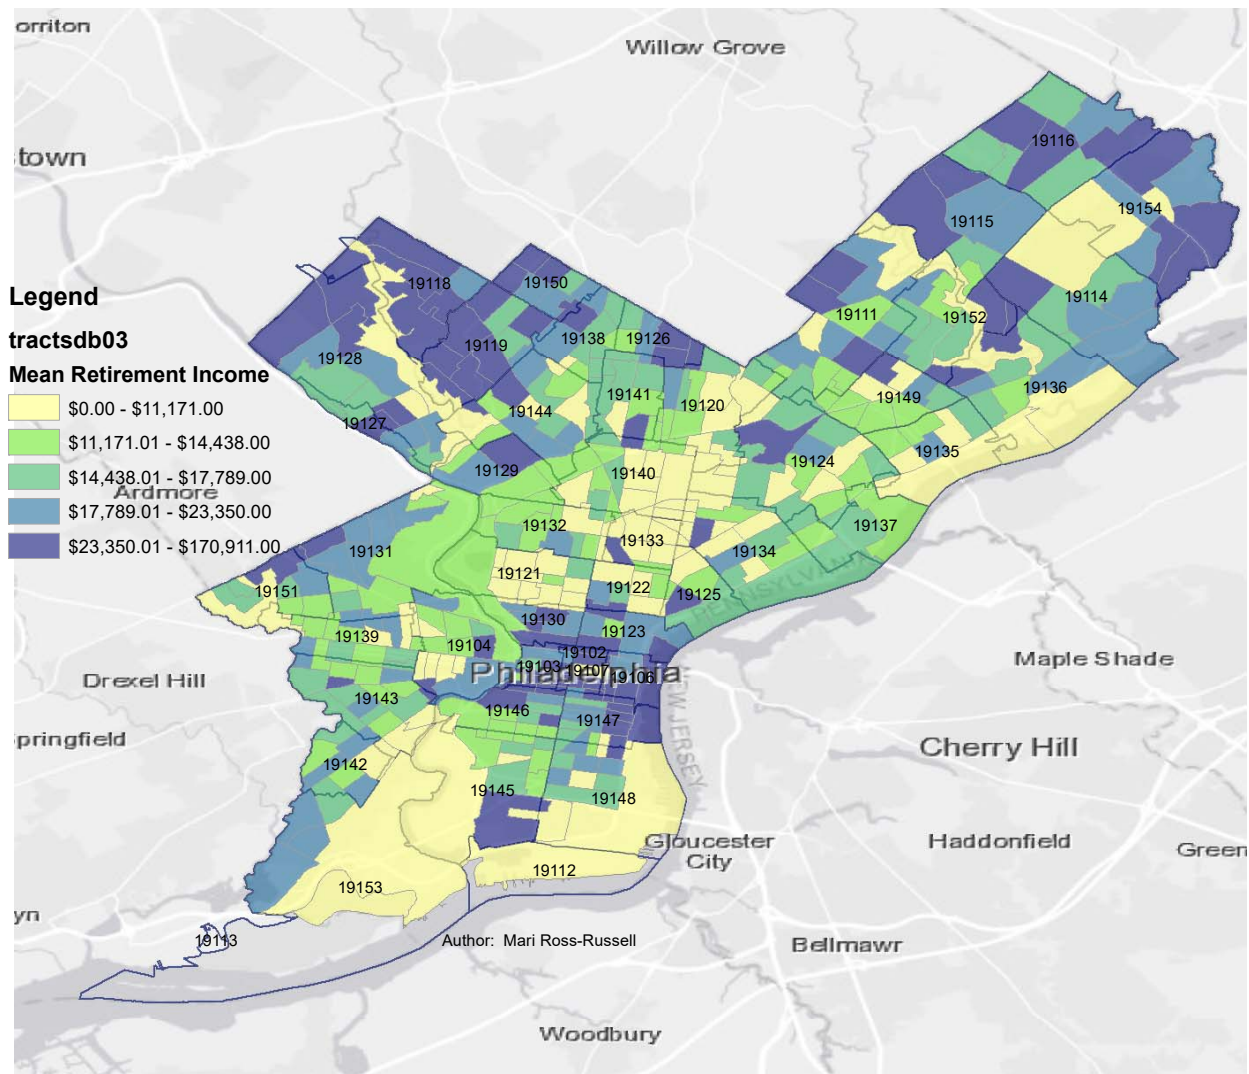

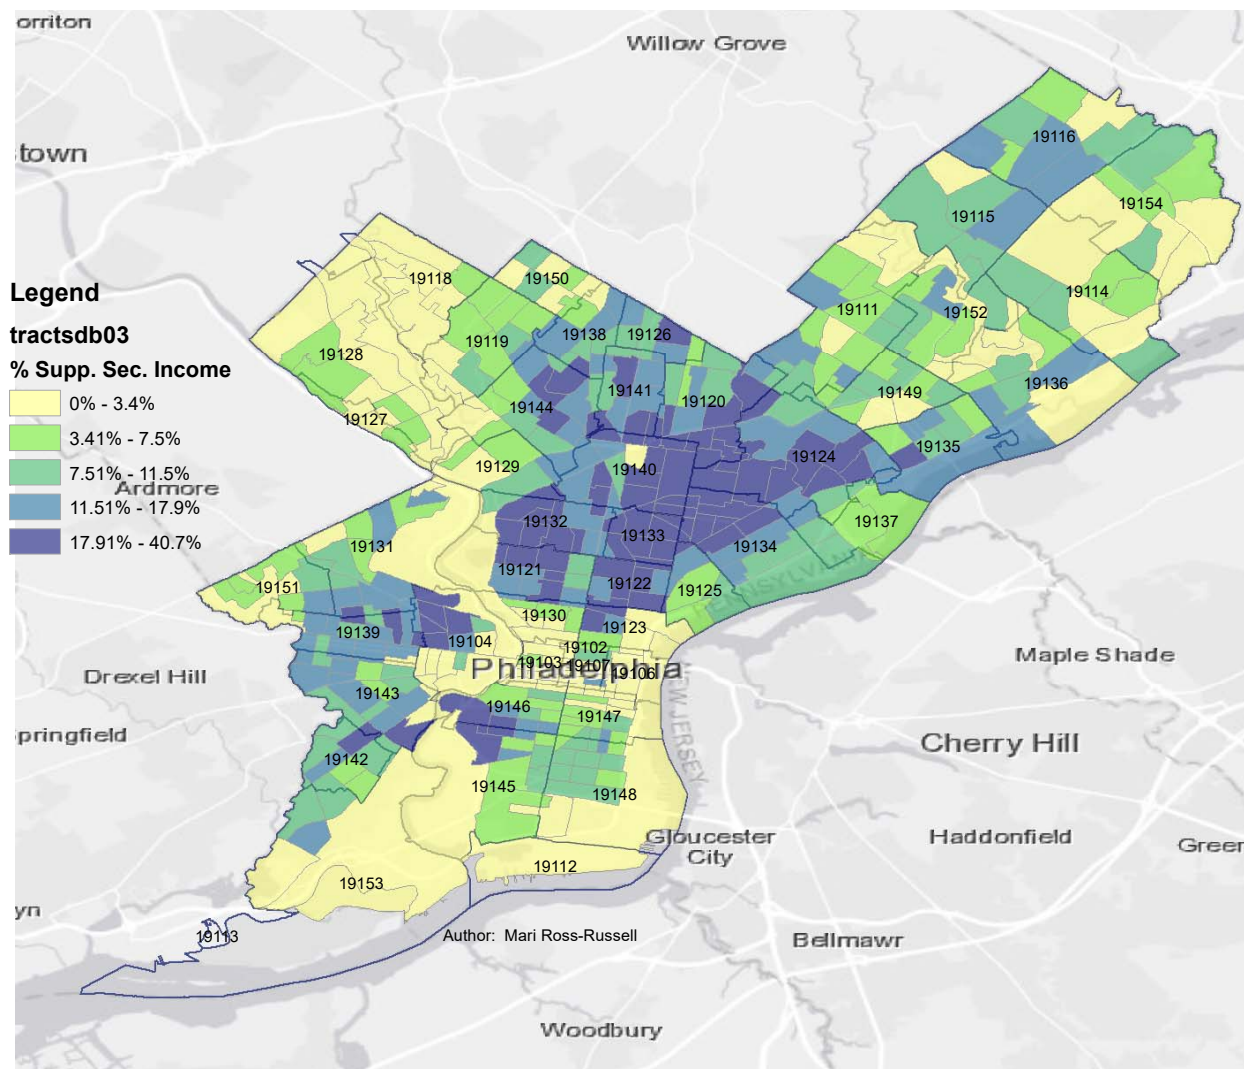

Figure 55. Percentage of Total Households in Philadelphia County receiving Supplemental Security Income in 2015 Inflation Adjusted Dollars by Census Tract, 2015 (ACS 5yr DP03)

The maps in Figures 55. and 56. emphasize, the percentage of households receiving supplemental security and the mean or averaged income in 2015 inflation adjusted dollars by census tract in Philadelphia County from this benefit. In these maps the five categories or groupings start with the lightest color and lowest amount and gradually increases to the highest percentage or income and darkest color. (Please note: there are a few census tracts that have zero population) The highest percentage of households in a census tract receiving supplemental security is 40.7% and the highest mean or averaged income benefit is \$19,161 at year end in 2015. The five groupings are quintile based. This means the total number of census tracts are equally divided among the groups. Census tracts are population density based. The wider the dispersion of the population the larger the geographic area within a census tract. This explains why the census tracts are different sizes. The more densely populated the area the smaller the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey and zip codes in dark blue. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table DP03.

Figure 56. Total Households in Philadelphia County receiving Supplemental Security Income by Mean (Average) Benefit in 2015 Inflation Adjusted Dollars by Census Tract, 2015 (ACS 5yr DP03)

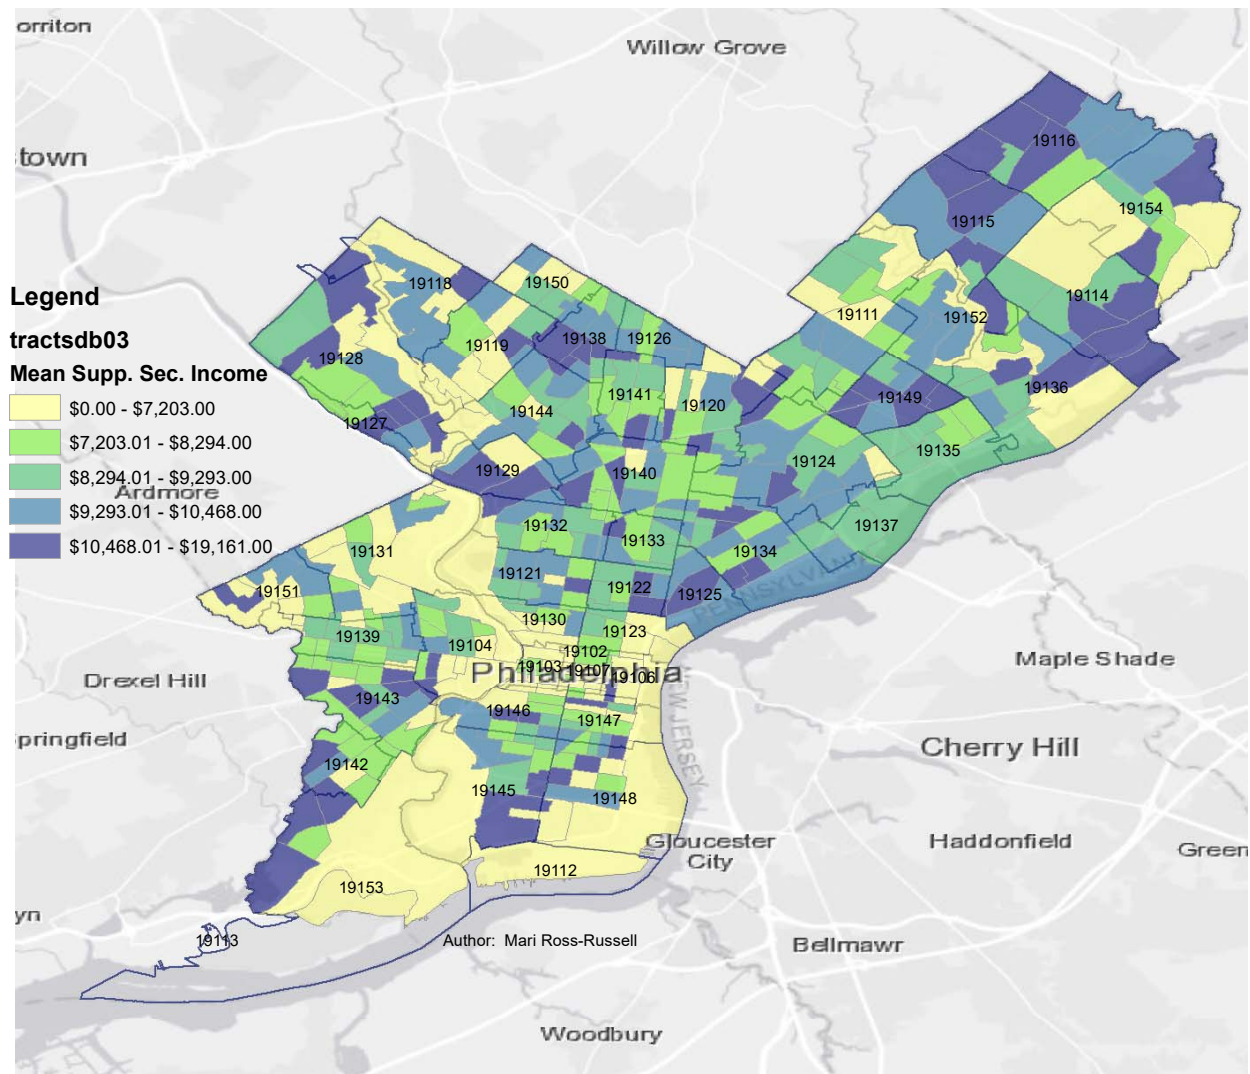

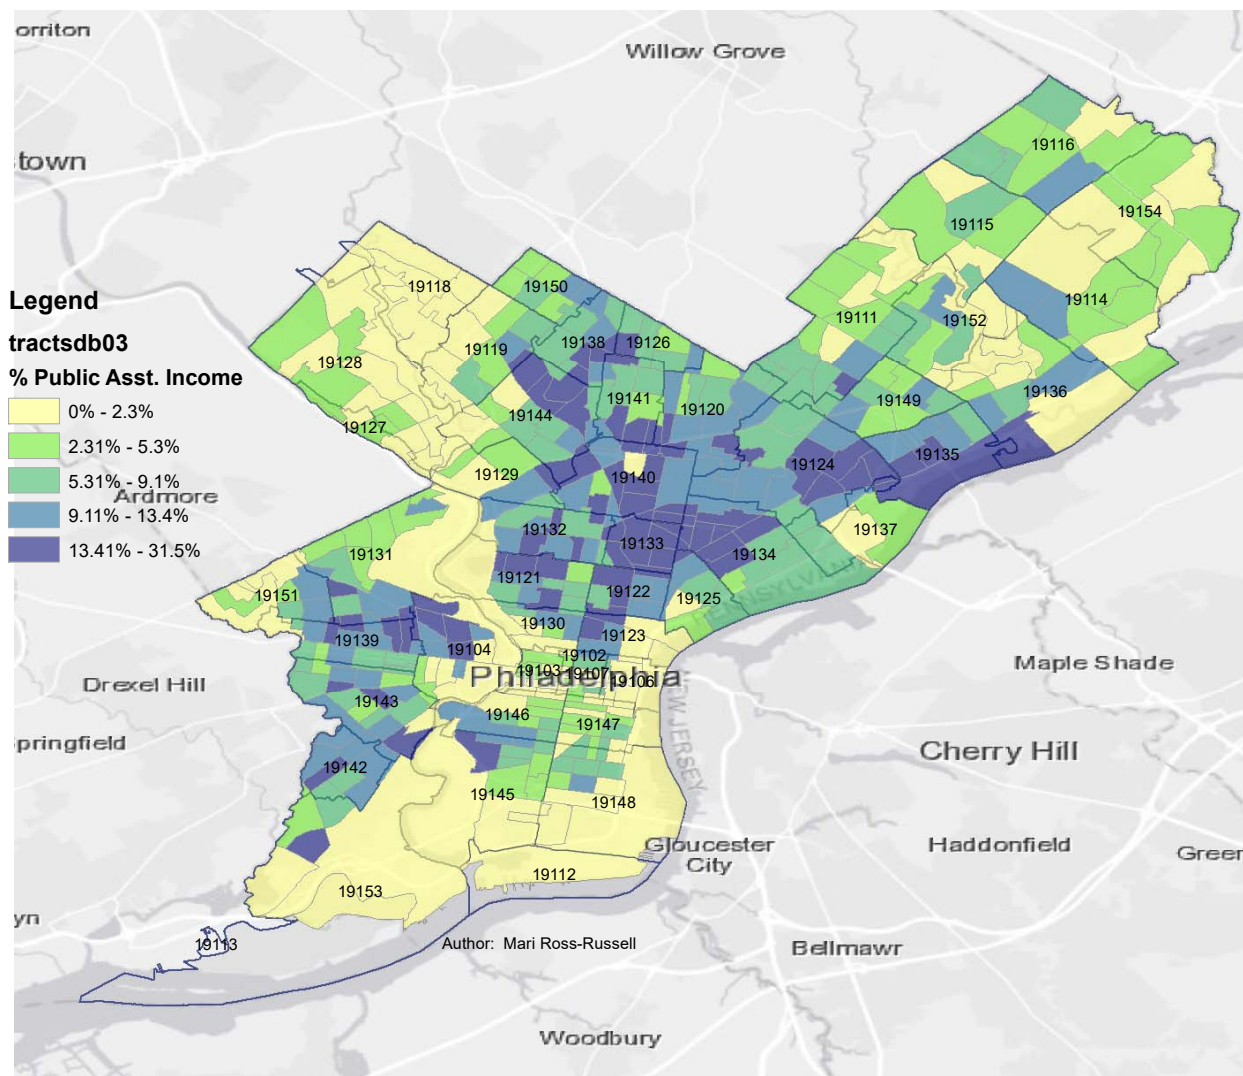

Figure 57. Percentage of Total Households in Philadelphia County receiving Public Assistance Income in 2015 Inflation Adjusted Dollars by Census Tract, 2015 (ACS 5yr DP03)

The maps in Figures 57. and 58. focus on the percentage of households receiving public assistance and the mean or averaged income in 2015 inflation adjusted dollars, by census tract in Philadelphia County, from this benefit. The five categories or groupings shown in these two figures start with the lightest color and lowest amount and gradually increases to the highest percentage or income and darkest color. (Please note: there are a few census tracts that have zero population) The highest percentage of households in a census tract receiving public assistance is 31.5% and the highest mean or averaged income benefit is \$12,491 at year end in 2015. The five groupings are quintile based. This means the total number of census tracts are equally divided among the groups. Census tracts are population density based. The wider the dispersion of the population the larger the geographic area within a census tract. The more densely populated the area the smaller the census tract. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey and zip codes in dark blue. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table DP03.

Figure 58. Total Households in Philadelphia County receiving Public Assistance Income by Mean (Average) Benefit in 2015 Inflation Adjusted Dollars by Census Tract, 2015 (ACS 5yr DP03)

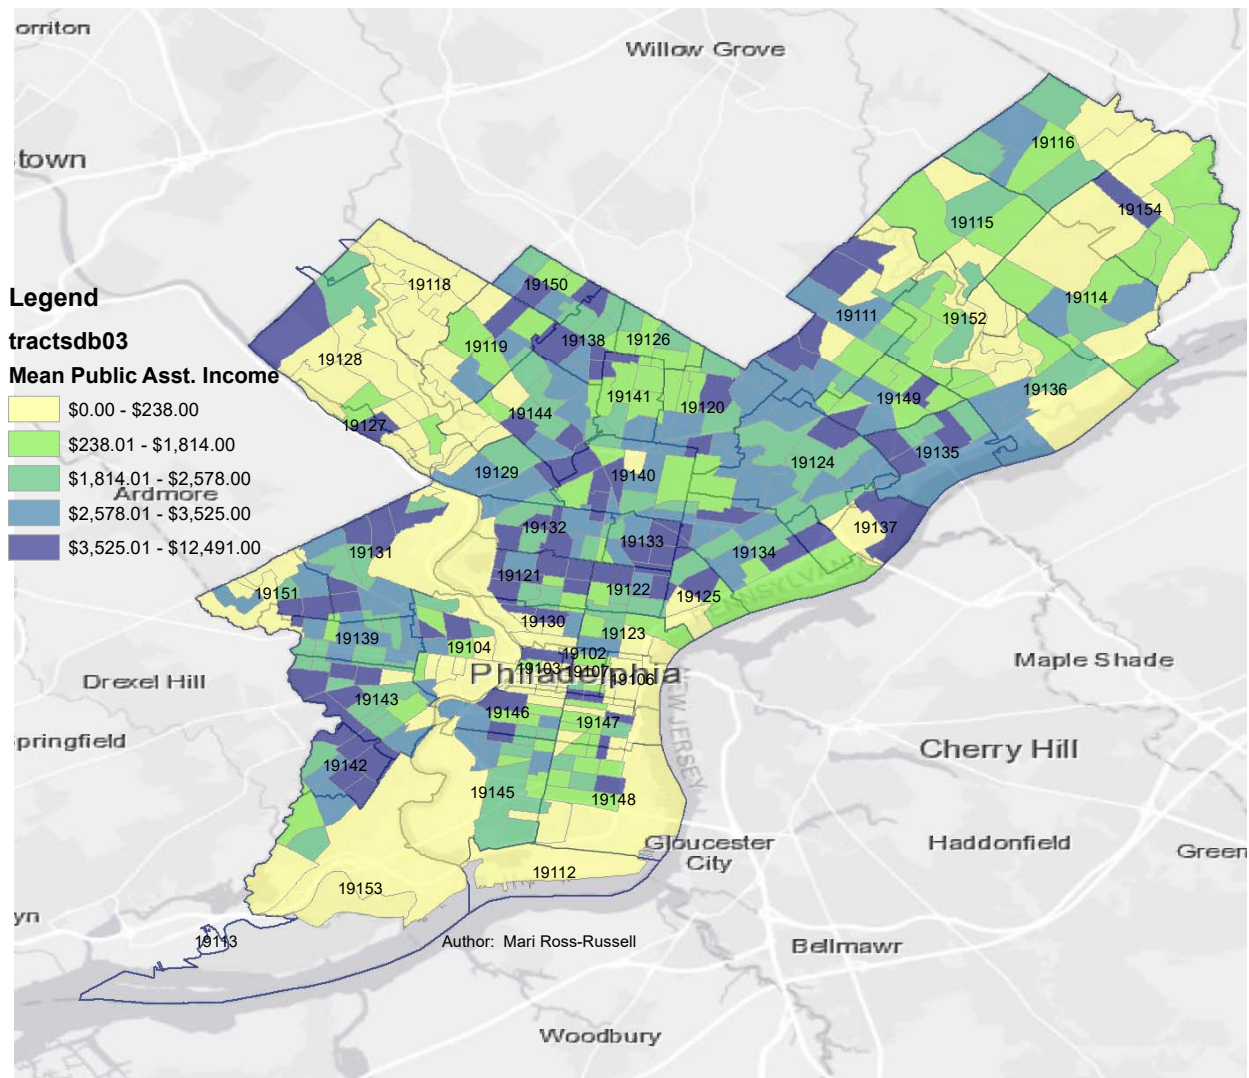

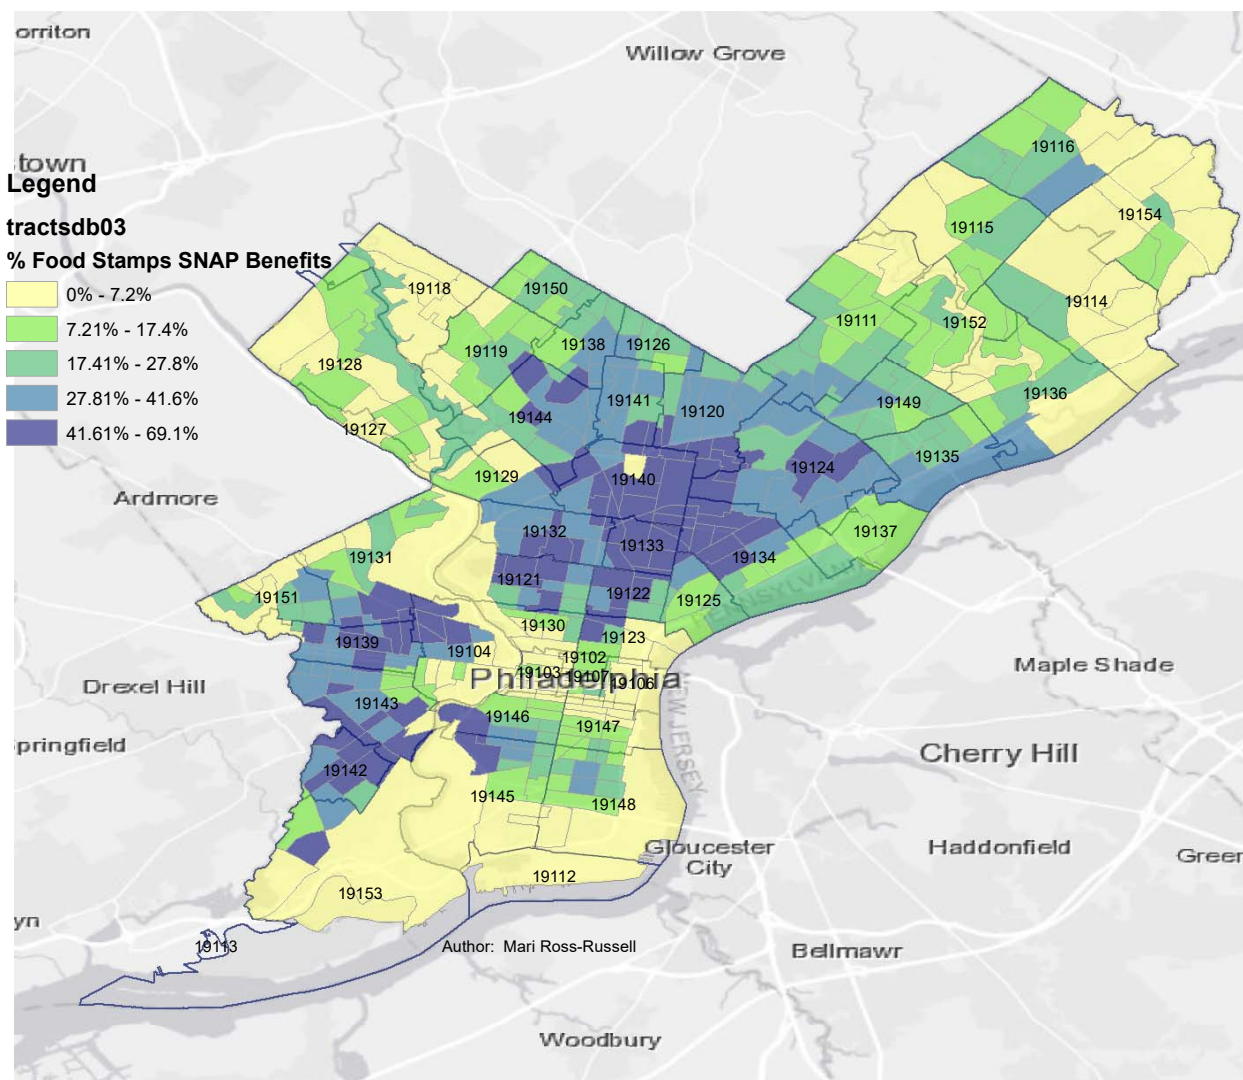

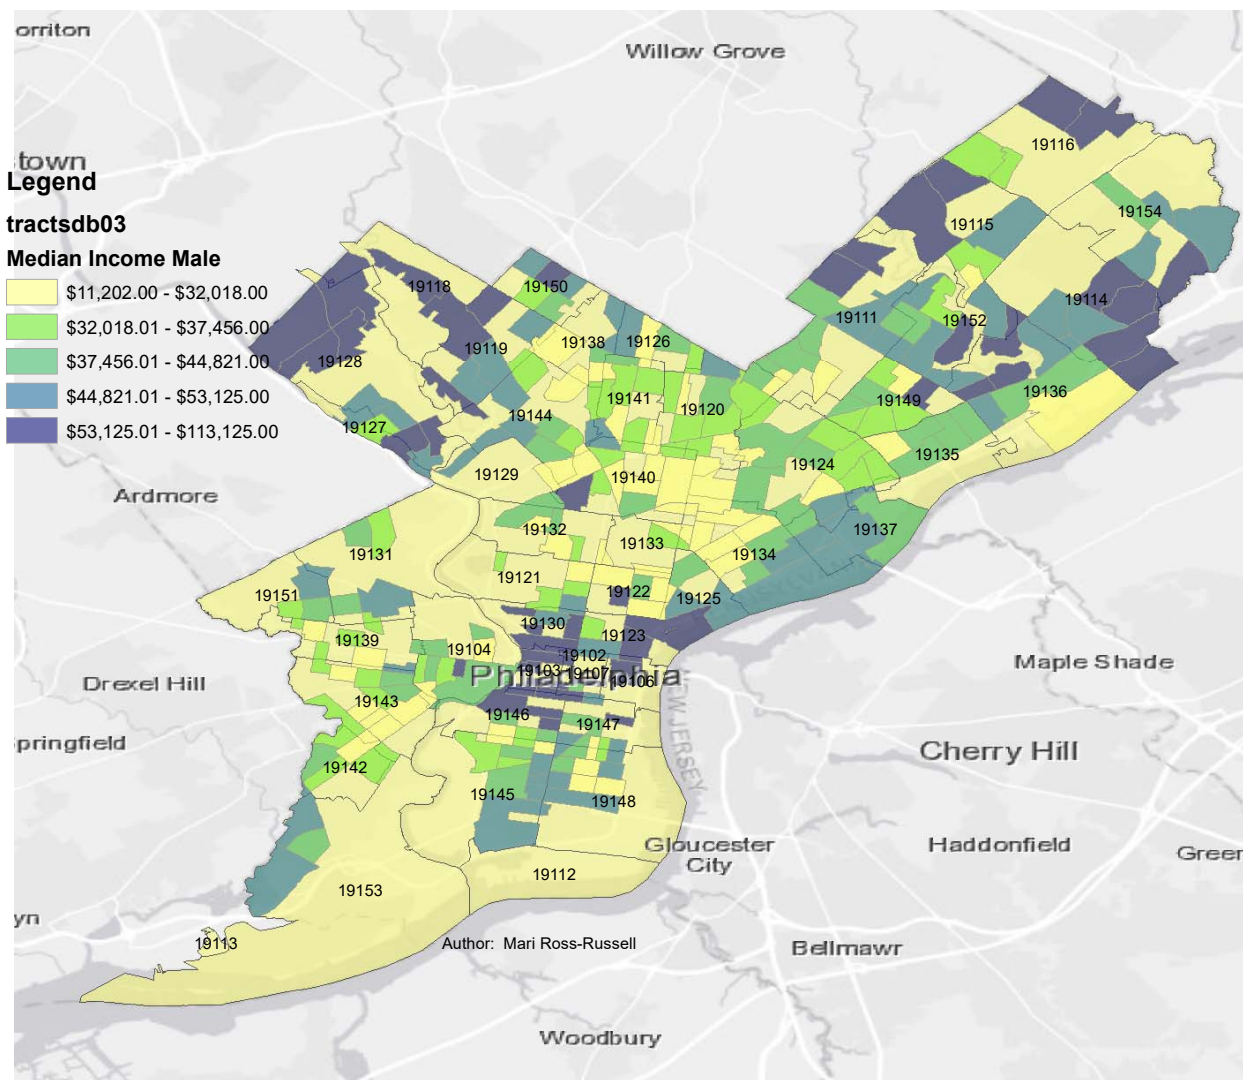

Figure 59. Percentage of Total Households in Philadelphia County receiving Food Stamps/ Supplemental Nutrition Assistance Program (SNAP) benefits in 2015 Inflation Adjusted Dollars by Census Tract, 2015 (ACS 5yr DP03)

The map in Figure 59. is the last in the series to focus on the percentage of households receiving a public or private income benefit in 2015 inflation adjusted dollars, by census tract in Philadelphia County. As with the other maps, the five categories or groupings shown in this figure start with the lightest color and lowest amount and gradually increases to the highest percentage and darkest color. (Please note: there are a few census tracts estimated to have zero population) The highest percentage of households in a census tract receiving food stamps or SNAP benefits is 69.1% at year-end in 2015. The five groupings are quintile based. The map above is broken out by census tracts which are outlined in grey and zip codes in dark blue. Many of the cities in area of Philadelphia County have been included to act as points of reference. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table DP03.

Figure 60. Median Earnings for Male Full-time Year-round Workers in Inflation Adjusted Dollars for Philadelphia County by Census Tract, 2015 (ACS DP03)

Figures 60. and 61. illustrate the median or mid-point income for males and female who worked full-time year-round in 2015 inflation adjusted dollars, by census tract in Philadelphia County. As with the other maps, the five categories or groupings shown in this figure start with the lightest color and lowest amount and gradually increases to the highest percentage and darkest color. Zero dollars was excluded in the creation of this map resulting in a greater number of yellow tracts shown. The highest percentage of median income for males was \$113,125 and for females for the same time period was \$84,408 at year-end in 2015. It should be noted that the software starts a category where the previous category ended.

The map above is broken out by census tracts which are outlined in grey and zip codes outlined in dark blue. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table DP03.

Figure 61. Median Earnings for Female Full-time Year-round Workers in Inflation Adjusted Dollars for Philadelphia County by Census Tract, 2015 (ACS DP03)

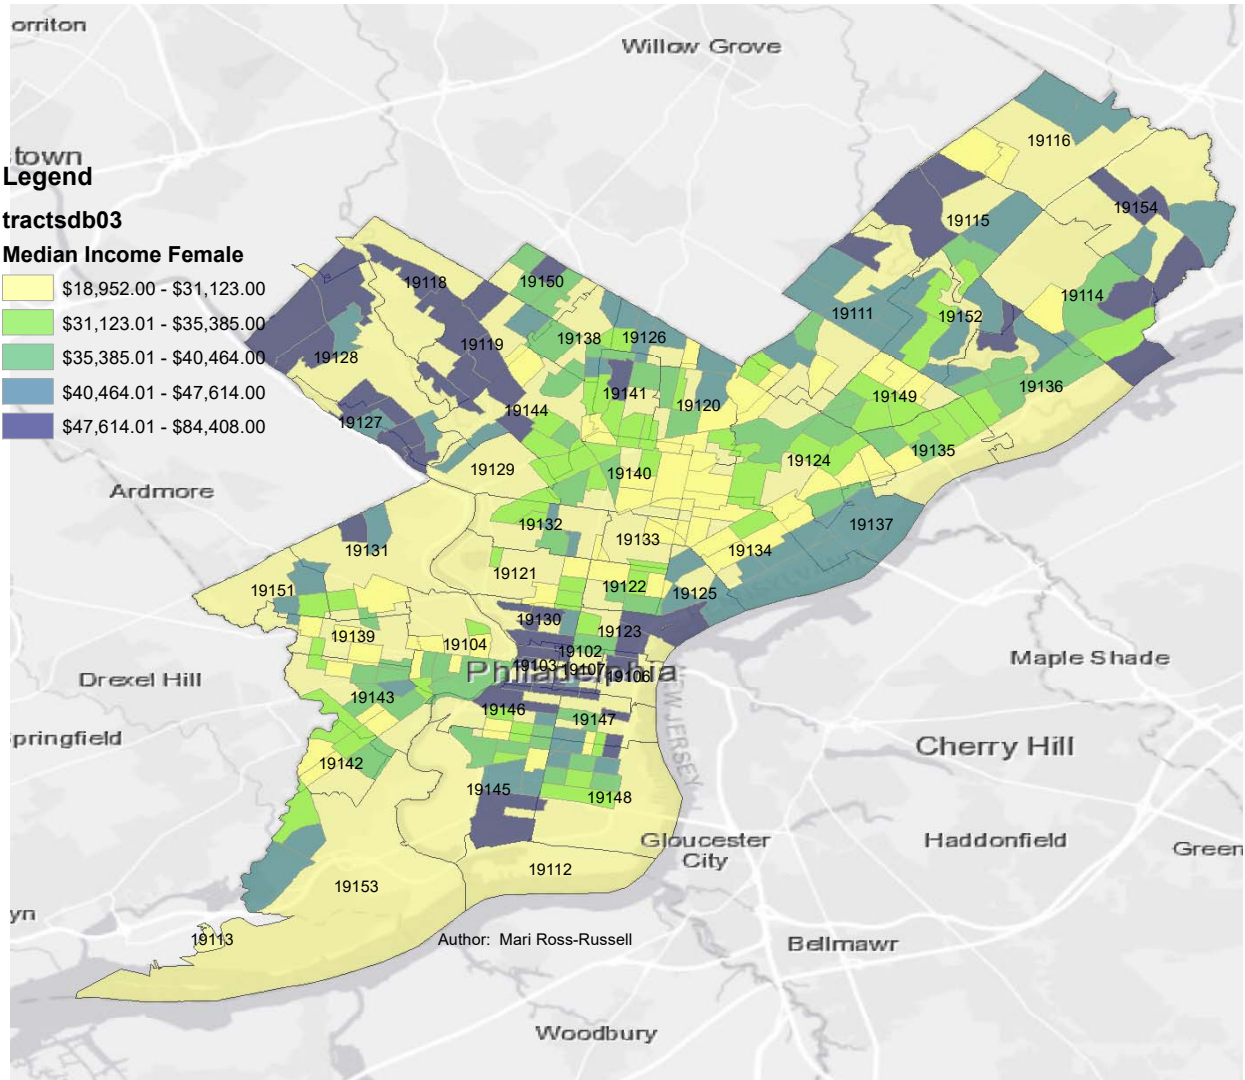

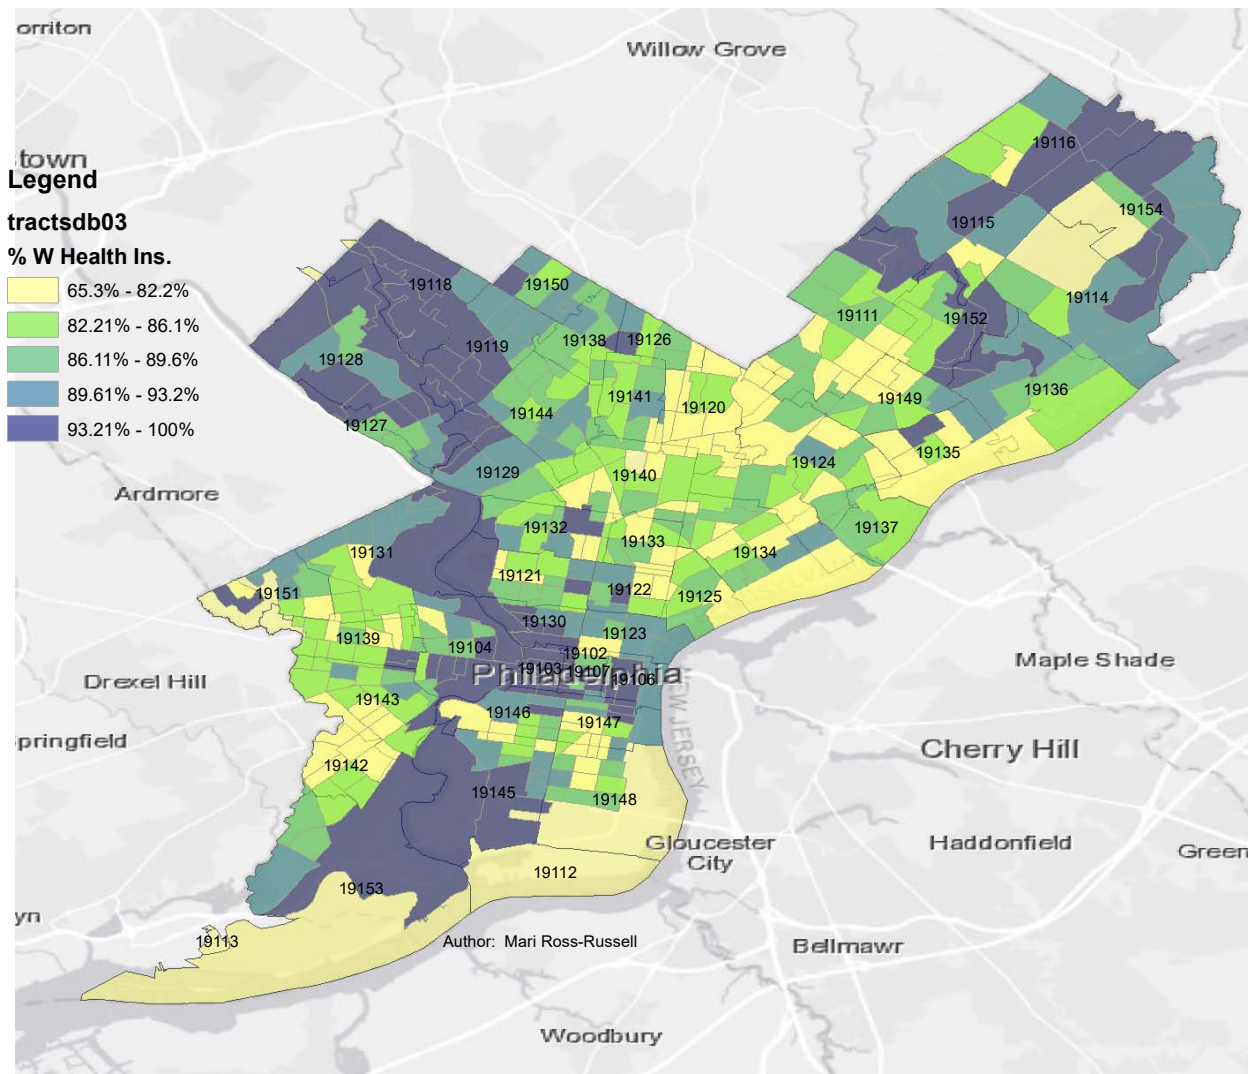

Figure 62. Percentage of Civilian Noninstitutionalized Population with Health Insurance Coverage in Philadelphia County by Census Tract, 2015 (ACS 5yr DP03)

The next series of maps in Figures 62. through 71. focuses on the number of individuals in the noninstitutionalized population by their insurance status at the census tract level living in Philadelphia County. The maps are broken out into five categories or groupings shown in these figures and start with the lightest color and lowest percentage and gradually increases to the highest percentage and darkest color at the end of 2015.

The five groupings are quintile based. That is to say, the total number of census tracts are equally divided among the groups. There are a total of 384 census tracts in Philadelphia County and each group would have 76 or 77 tracts. Census tracts are population density based. The wider the dispersion of the population the larger the geographic area within a census tract. The more densely populated the area the smaller the census tract. This is why the census tracts are different sizes. Generally, the population within a census tract is from 2,500 to 8,000. The map above is broken out by census tracts which are outlined in grey. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table DP03.

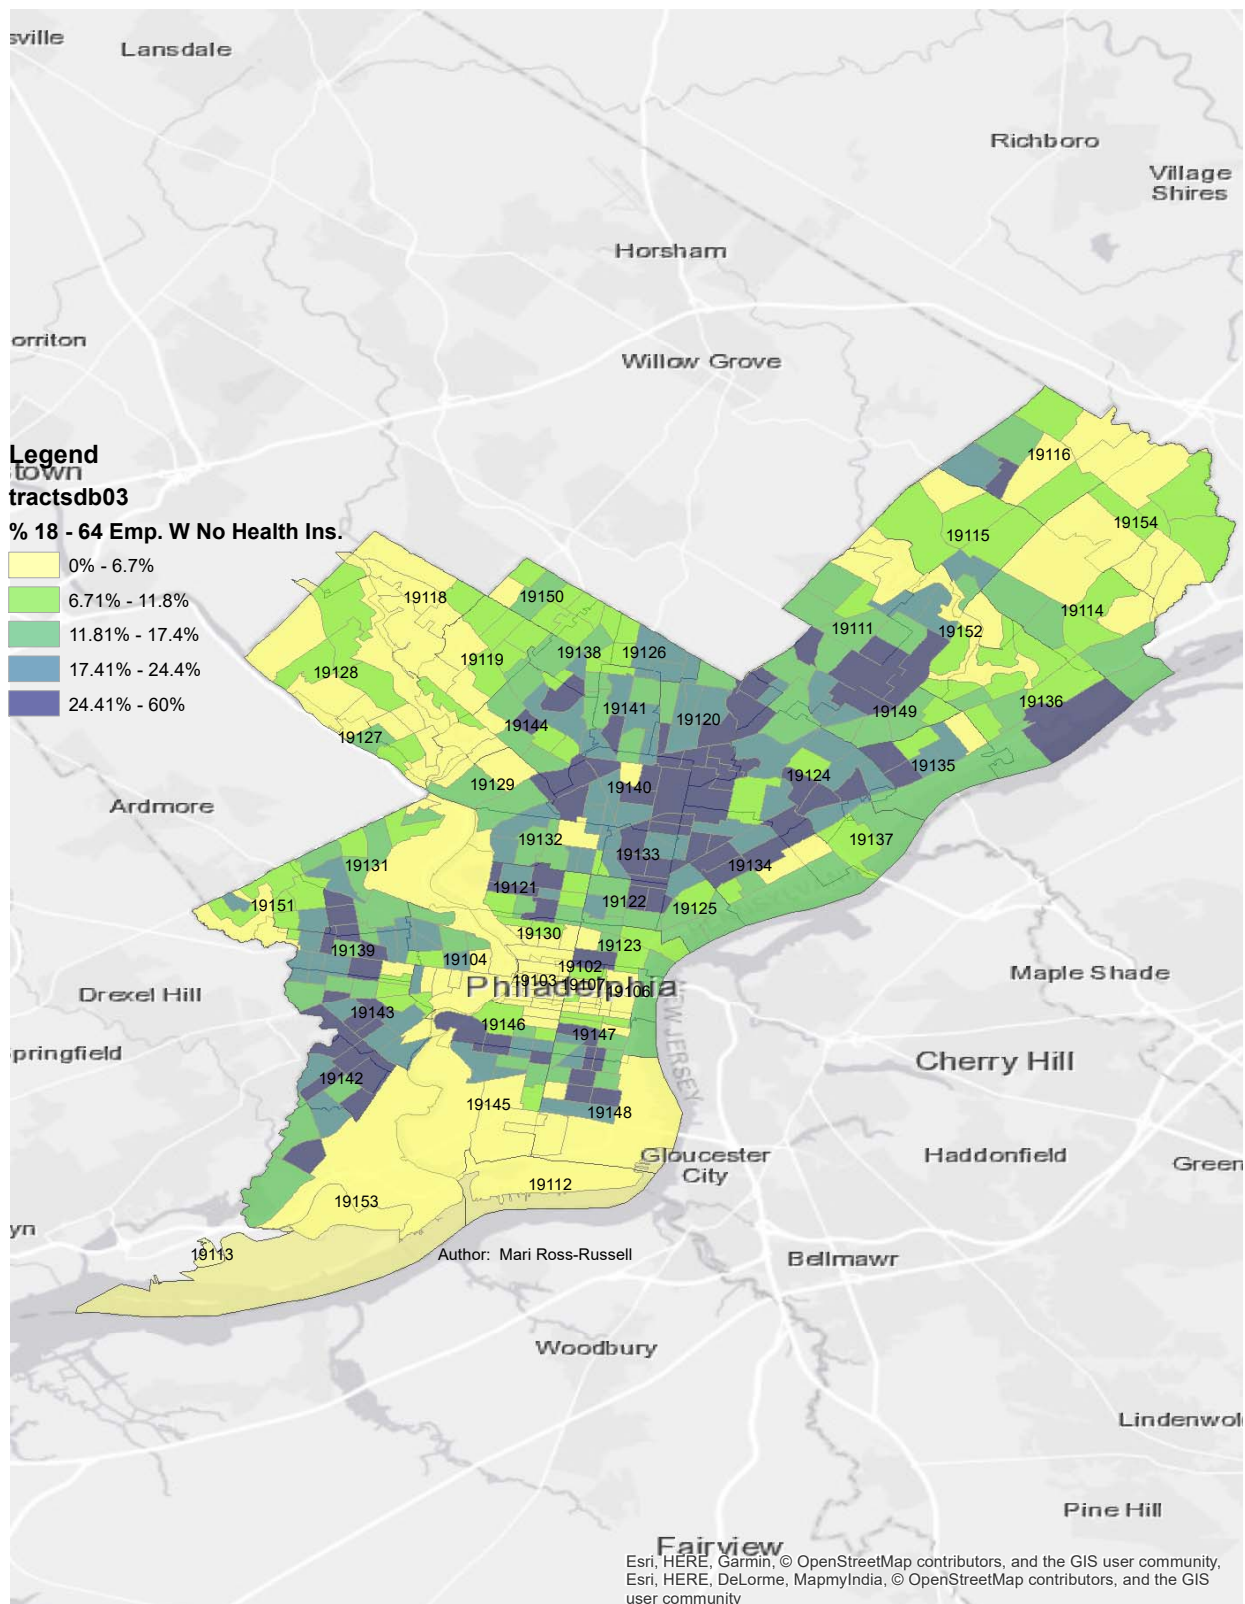

Figure 71. Percentage of Civilian Noninstitutionalized Population 18 to 64 Years of Age, Unemployed with No Health Insurance Coverage in Philadelphia County by Census Tract, 2015 (ACS 5yr DP03)

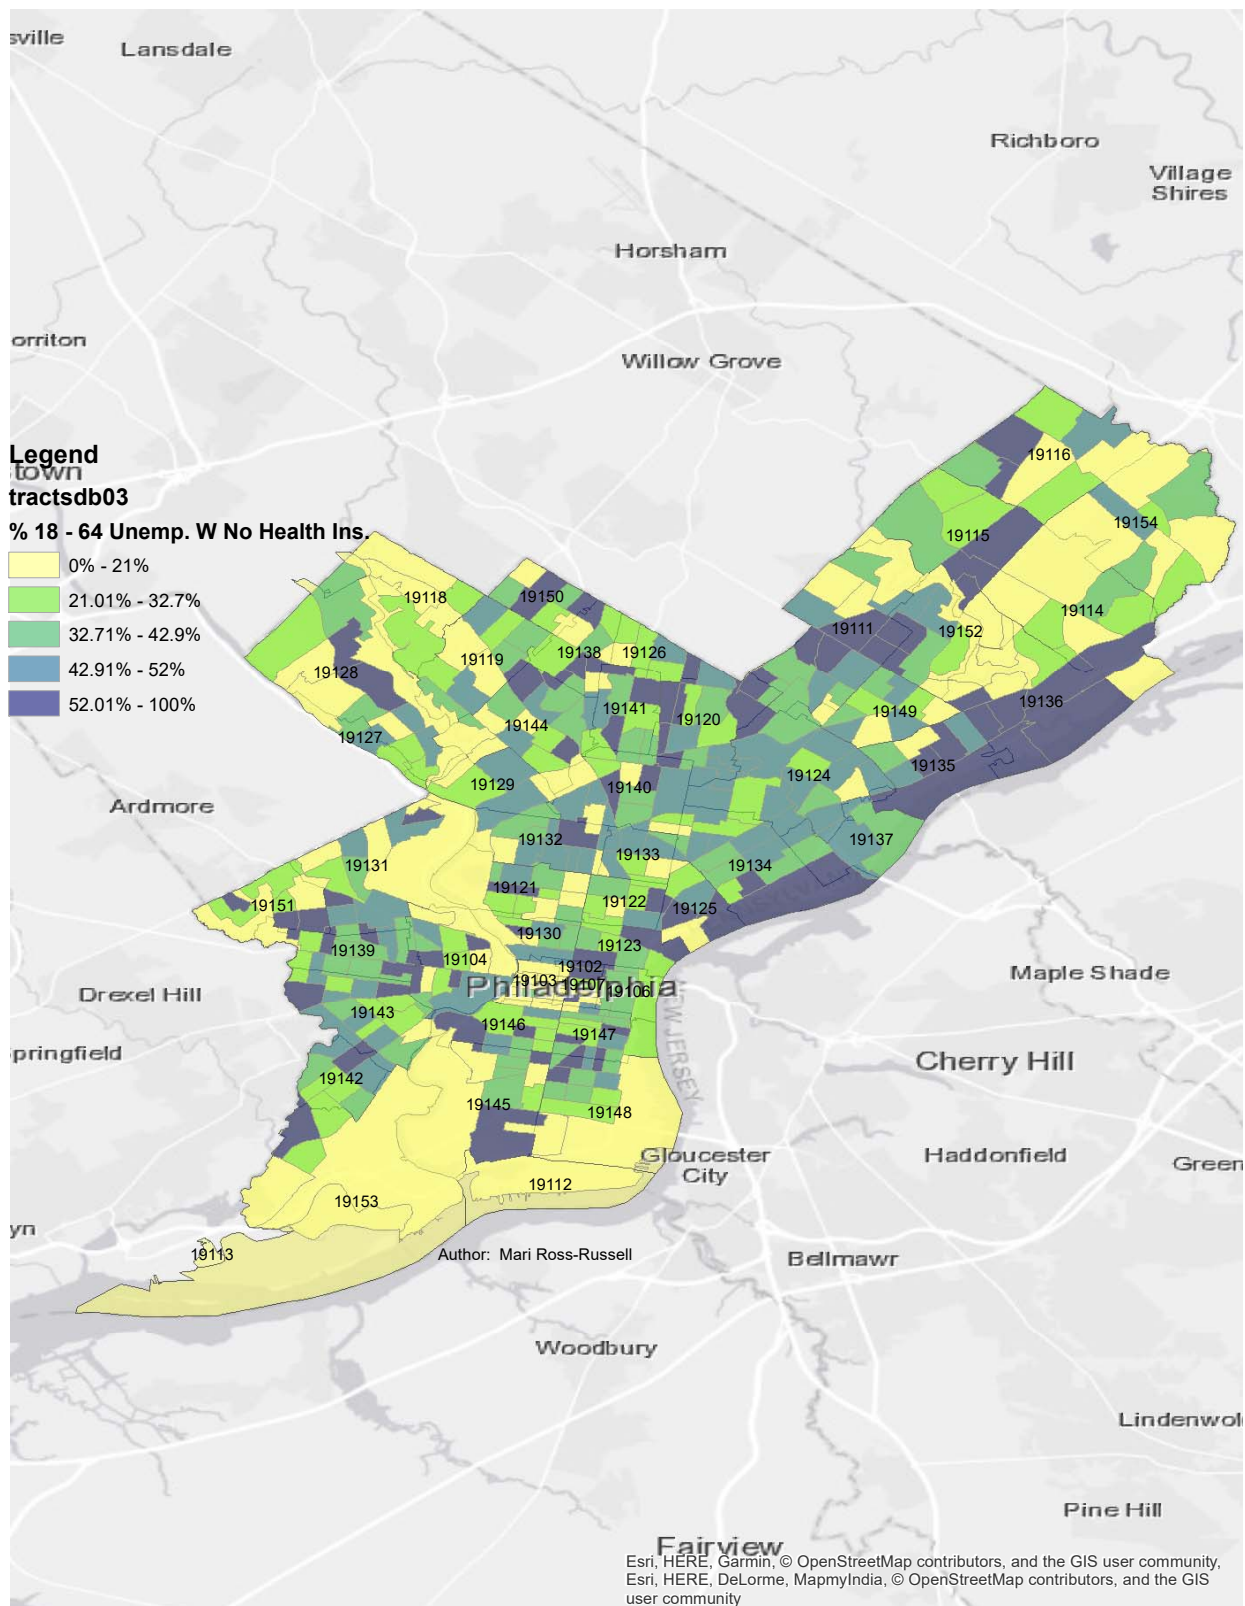

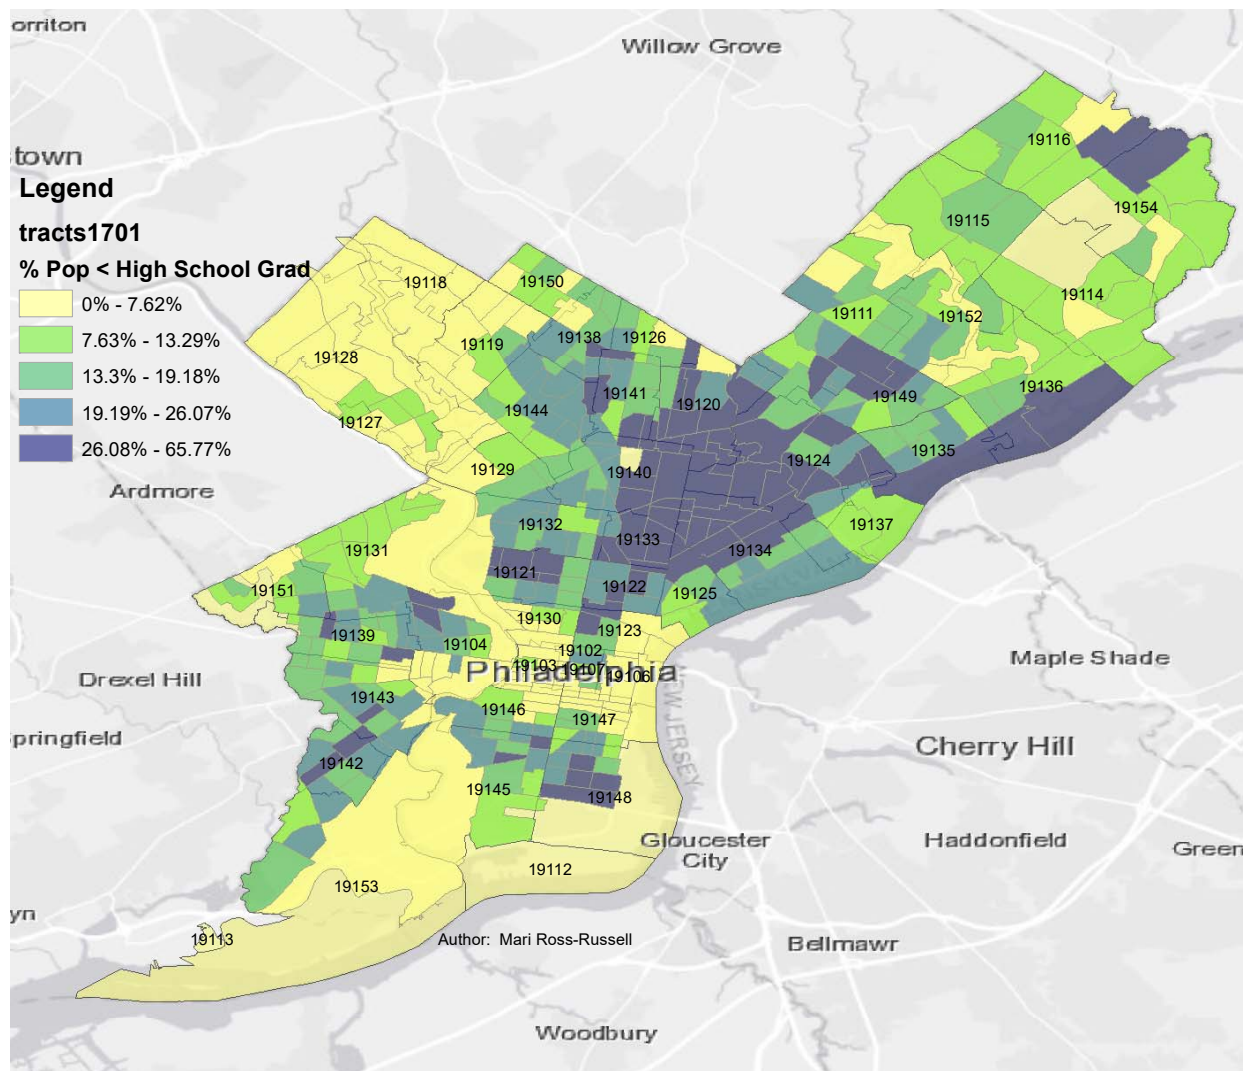

Figure 72. Estimated Educational Attainment Percentage of the Total Population Residing in Philadelphia County 25 Years of Age and Older with Less Than High School Graduate, by Census Tract, 2015 (ACS 5yr S1701)

The following group of maps in Figures 72. through 79. looks at the number of individuals 25 years of age and older by their educational attainment and educational level achieved by living at or below 100% of the federal poverty level. These maps hope to demonstrate the relationship between education and income. The maps are paired, the first shows education the second FPL and education at the census tract level in Philadelphia County. What can be noted is that generally as education increases the percentage living at 100% of the federal poverty level decreases. The maps are broken out into five categories or groupings as seen in the figures. Each legend starts with the lightest color and lowest percentage and gradually increases to the highest percentage and darkest color at the end of 2015. The five groupings are quintile based and the total number of census tracts are equally divided among the groups. The maps are broken out by census tracts which are outlined in grey and the zip codes in dark blue. Many of the cities in the area of Philadelphia County have been included to act as points of

reference. The map in the figure was generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701.

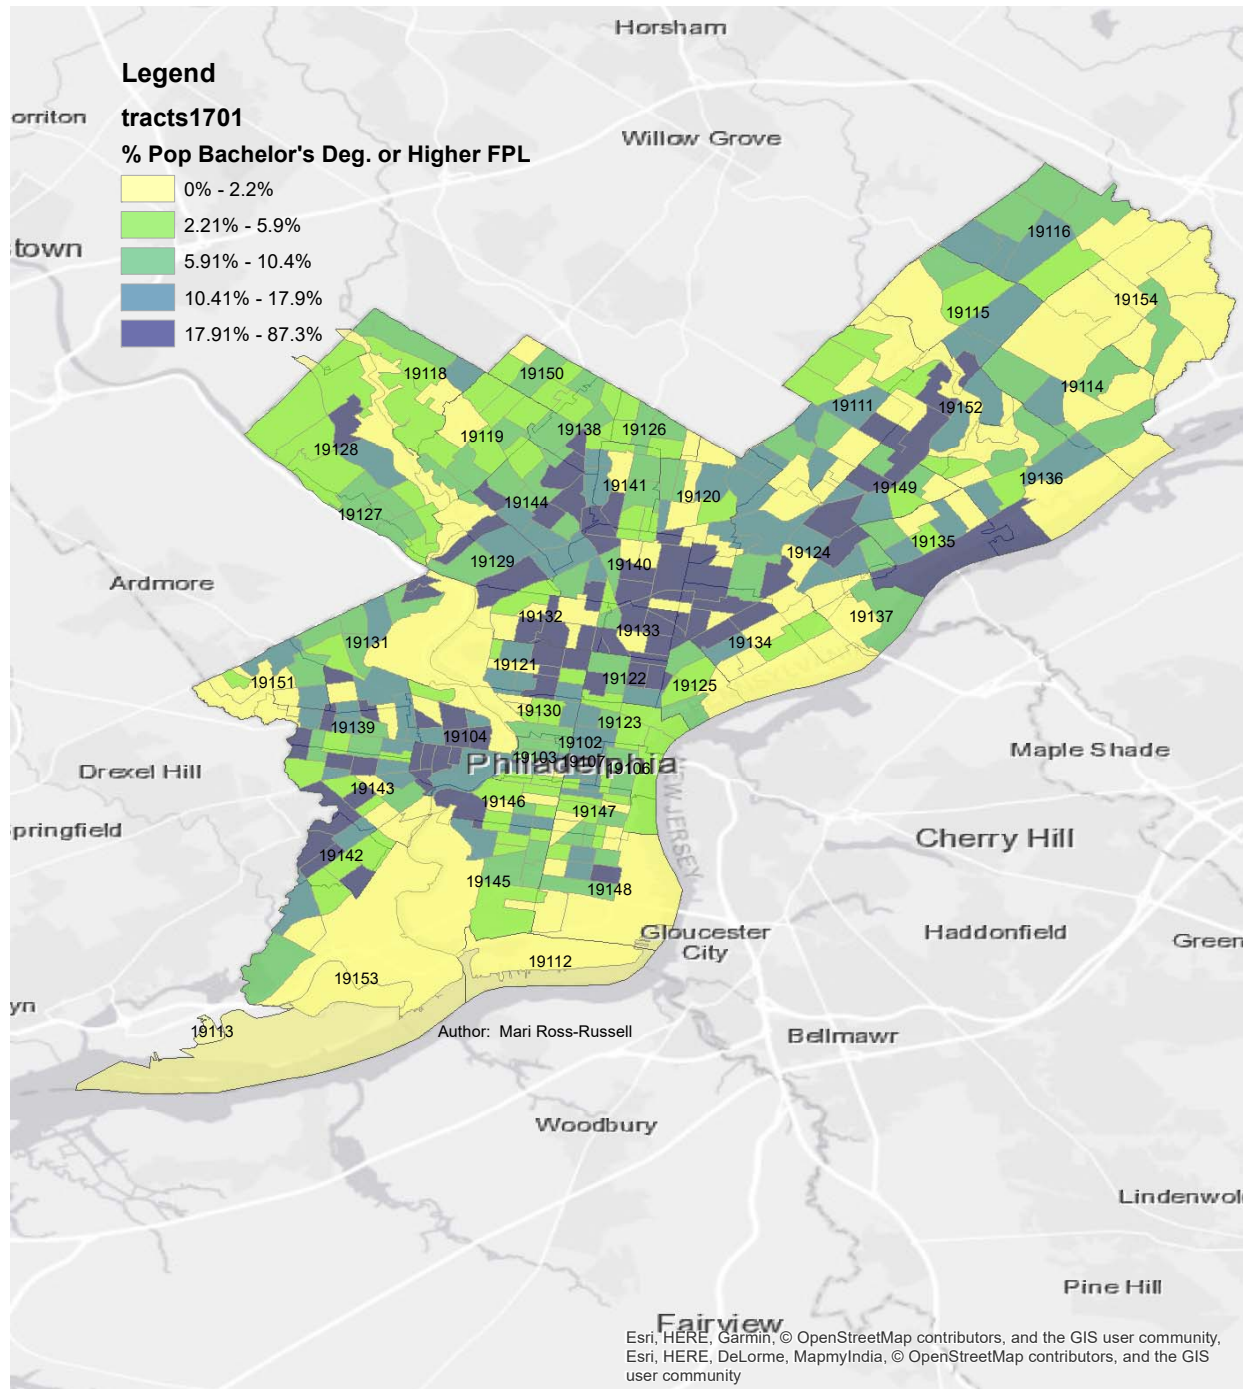

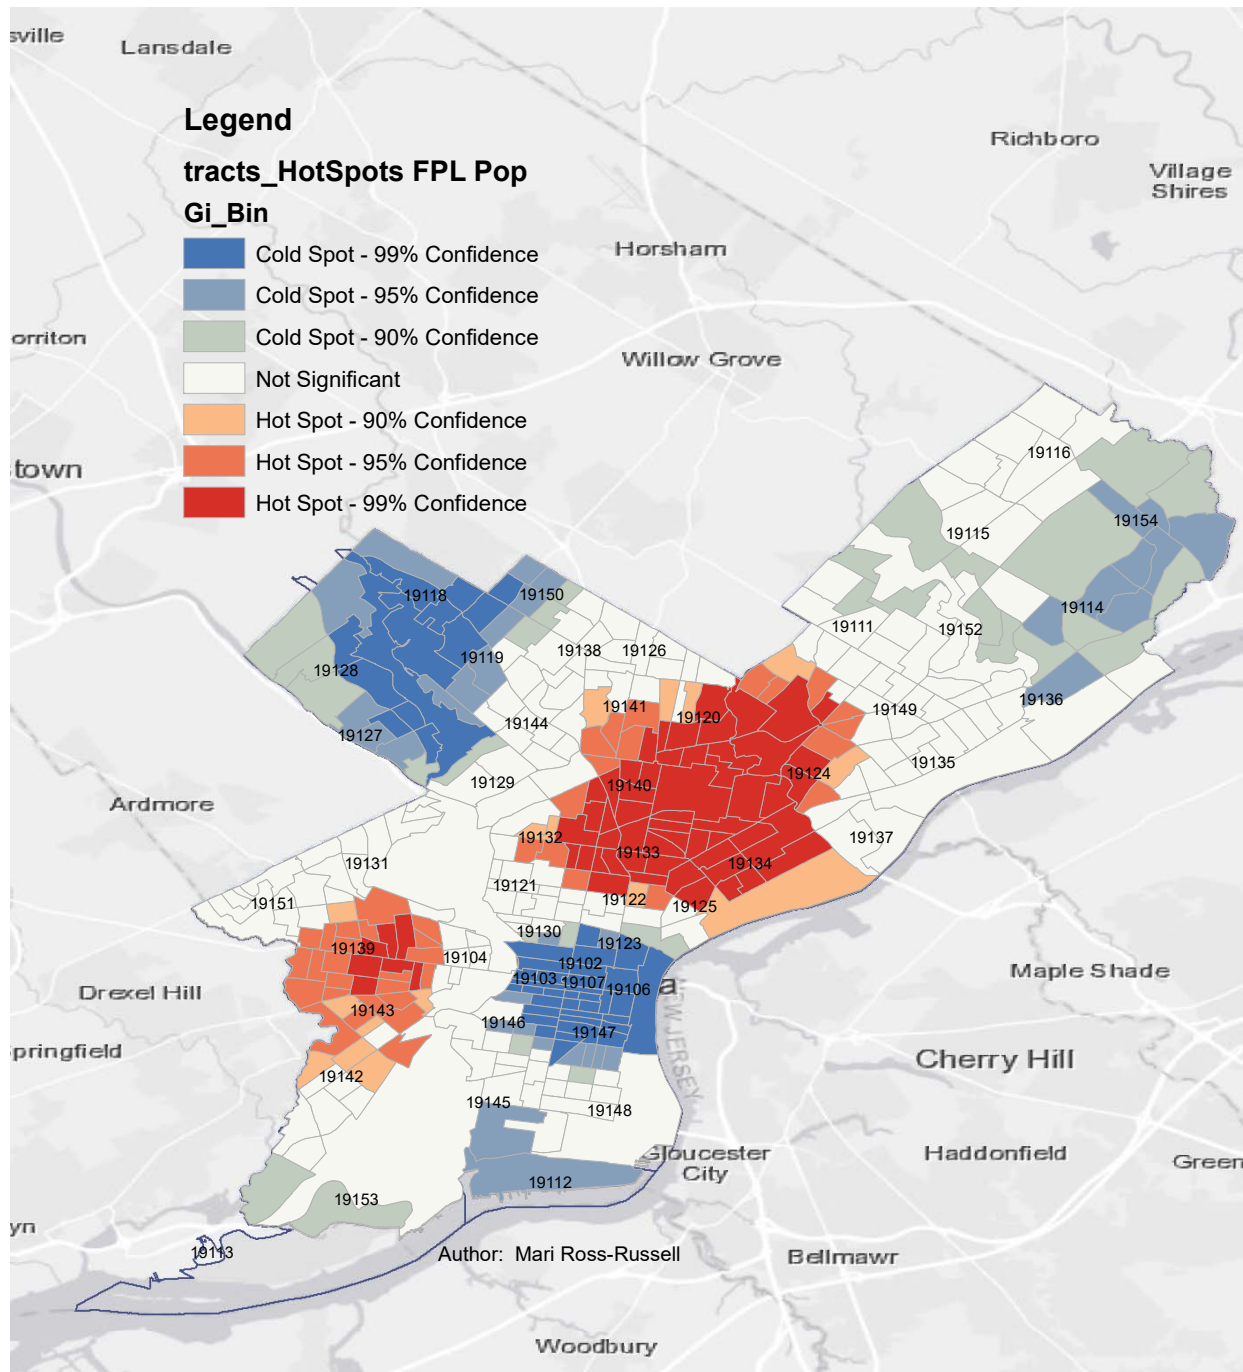

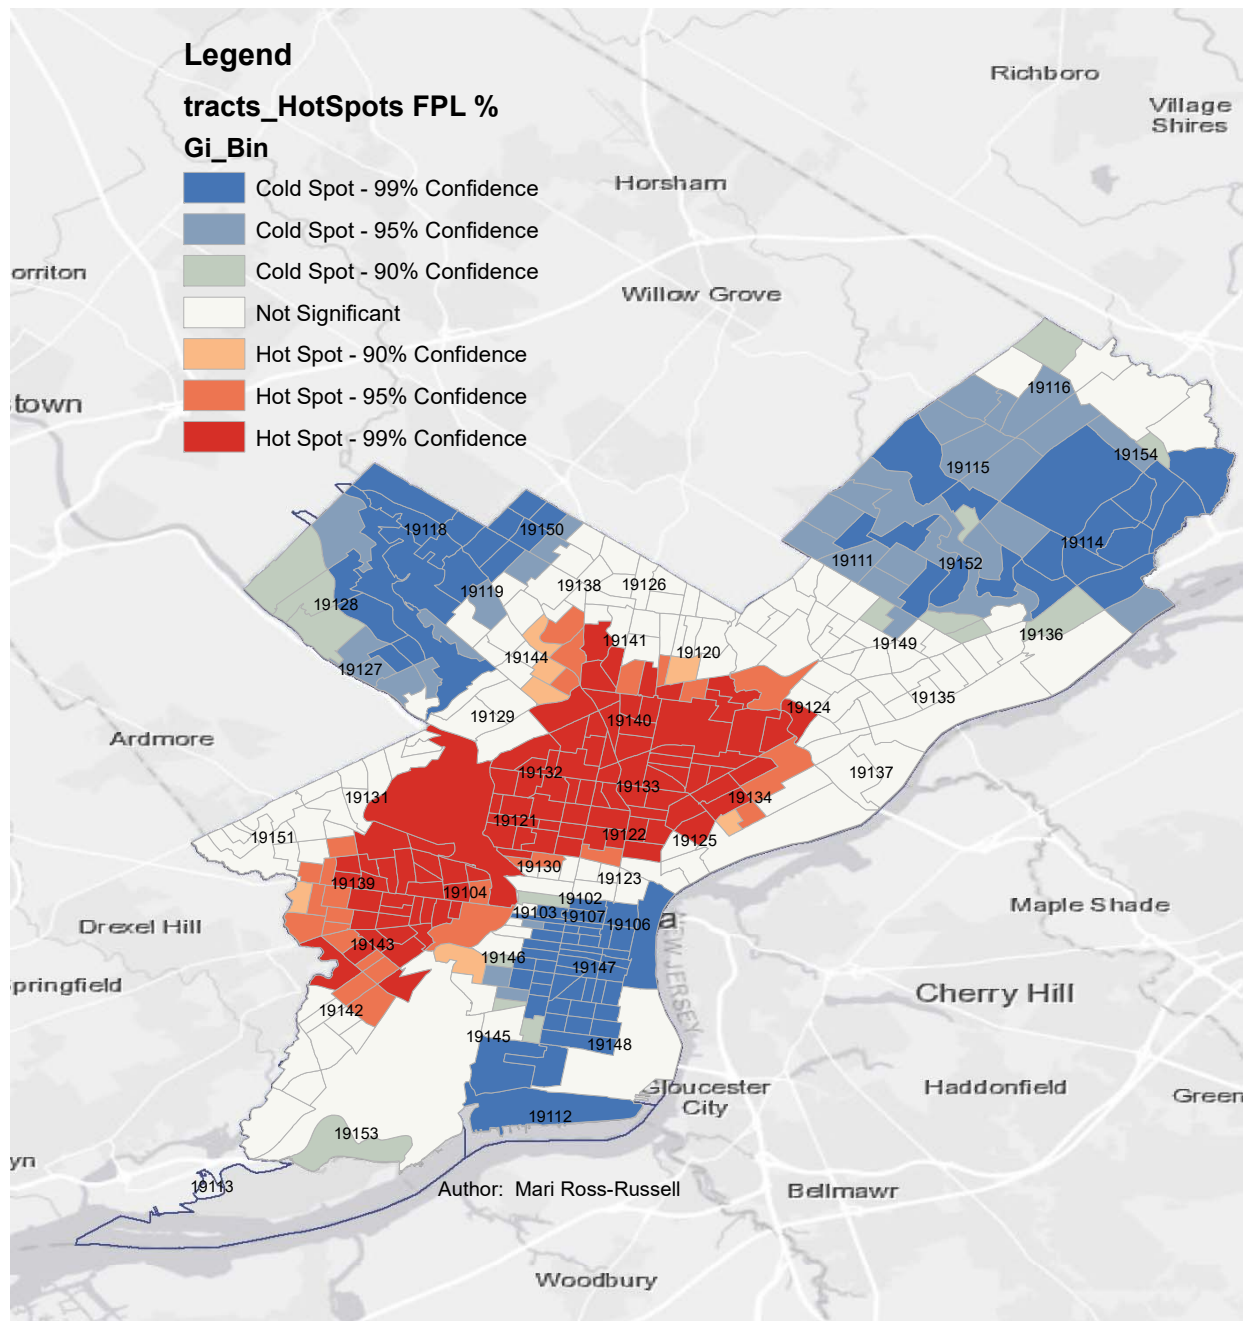

Figure 80. Below Poverty Hot Spots Based on Poverty Population Counts by Census Tract, Philadelphia County 2015 (ACS 5yr S1701)

The map in the two hot spot figures were generated using ArcMap 10.5.1 and the data was from the five-year American Community Survey estimates in table S1701. The estimated total population or count of individuals living at or below 100% FPL was used in Figure 80. And the estimated percentage of the population of individuals living at or below 100% FPL was used in Figure 81.

Figure 81. Below Poverty Hot Spots Based on Poverty Population Percentage by Census Tract, Philadelphia County 2015 (ACS 5yr S1701)

The Hot Spot Analysis tool calculates the Getis-Ord Gi* statistic (pronounced G-i-star) for each feature or variable in a dataset. The resultant z-scores and p-values tell you where features with either high or low values in a cell cluster spatially. This tool works by looking at each feature within the context of neighboring features. A feature with a high value is interesting but may not be a statistically significant hot spot. To be a statistically significant hot spot, a feature will have a high value and be surrounded by other features with high values as well. The local sum for a feature and its neighbors is compared proportionally to the sum of all features; when the local sum is very different from the expected local

sum, and when that difference is too large to be the result of random chance, a statistically significant z-score results. When the false discovery rate (FDR) correction is applied, statistical significance is adjusted to account for multiple testing and spatial dependency.

Glossary

The Census Bureau classifies **earnings** from longest job (or self-employment) and other **employment earnings** into three types:

1. Money wage or salary income is the total income people receive for work performed as an employee during the income year. This category includes wages, salary, armed forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions are made for items such as taxes, bonds, pensions, and union dues.
2. Net income from nonfarm self-employment is the net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include items such as costs of goods purchased, rent, heat, power, depreciation charges, wages and salaries paid, and business taxes (not personal income taxes). In general, the Census Bureau considers inventory changes in determining net income from nonfarm self-employment; replies based on income tax returns or other official records do reflect inventory changes. However, when respondents do not report values of inventory changes, interviewers will accept net income figures exclusive of inventory changes. The Census Bureau does not include the value of saleable merchandise consumed by the proprietors of retail stores as part of net income.
3. Net income from farm self-employment is the net money income (gross receipts minus operating expenses) from the operation of a farm by a person on their own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, payments from government farm programs, money received from the rental of farm equipment to others, rent received from farm property if payment is made based on a percent of crops produced, and incidental receipts from the sale of items such as wood, sand, and gravel. Operating expenses include items such as cost of feed, fertilizer, seed, and other farming supplies; cash wages paid to farmhands; depreciation charges; cash rent; interest on farm mortgages; farm building repairs; and farm taxes (not state and federal personal income taxes). The Census Bureau does not include the value of fuel, food, or other farm products used for family living as part of net income. In determining farm self-employment income, the Census Bureau considers inventory changes in determining net income only when they are accounted for in replies based on income tax returns or other official records which reflect inventory changes; otherwise, the Census Bureau does not take inventory changes into account.

Educational Attainment—Data on **educational attainment** are derived from a single question that asks, "What is the highest grade of school...has completed, or the highest degree...has received?"

The single educational attainment question now in use was introduced in the CPS beginning January 1992, and is similar to that used in the 1990 Decennial Census of Population and Housing. Consequently, data on educational attainment from the 1992 CPS are not directly comparable to CPS data from earlier years. The new question replaces the previous two-part question used in the CPS that asked respondents to report the highest grade they had attended, and whether or not they had completed that grade.

The questions on educational attainment apply only to progress in "regular" schools. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior high schools), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained are regarded as transferable to a school in the regular school system.

Educational attainment data are needed for use in assessing the socioeconomic condition of the U.S. population. Government agencies also require these data for funding allocations and program planning and implementation. These data are needed to determine the extent of illiteracy rates of citizens in language minorities in order to meet statutory requirements under the Voting Rights Act. Based on data about educational attainment, school districts are allocated funds to provide classes in basic skills to adults who have not completed high school.

Data on educational attainment were derived from answers to Question 11 on the 2013 ACS, which was asked of all respondents. Educational attainment data are tabulated for people 18 years old and over. Respondents are classified according to the highest degree or the highest level of school completed. The question included instructions for persons currently enrolled in school to report the level of the previous grade attended or the highest degree received.

The educational attainment question included a response category that allowed people to report completing the 12th grade without receiving a high school diploma. Respondents who received a regular high school diploma and did not attend college were instructed to report "Regular high school diploma." Respondents who received the equivalent of a high school diploma

(for example, passed the test of General Educational Development (G.E.D.)), and did not attend college, were instructed to report “GED or alternative credential.” “Some college” is in two categories: “Some college credit, but less than 1 year of college credit” and “1 or more years of college credit, no degree.” The category “Associate’s degree” included people whose highest degree is an associate’s degree, which generally requires 2 years of college level work and is either in an occupational program that prepares them for a specific occupation, or an academic program primarily in the arts and sciences. The course work may or may not be transferable to a bachelor’s degree. Master’s degrees include the traditional MA and MS degrees and field-specific degrees, such as MSW, MEd, MBA, MLS, and MEng. Instructions included in the respondent instruction guide for mailout/mailback respondents only provided the following examples of professional school degrees: medicine, dentistry, chiropractic, optometry, osteopathic medicine, pharmacy, podiatry, veterinary medicine, law, and theology. The order in which degrees were listed suggested that doctorate degrees were “higher” than professional school degrees, which were “higher” than master’s 61 degrees. If more than one box was filled, the response was edited to the highest level or degree reported.

The instructions further specified that schooling completed in foreign or ungraded school systems should be reported as the equivalent level of schooling in the regular American system. The instructions specified that certificates or diplomas for training in specific trades or from vocational, technical or business schools were not to be reported. Honorary degrees awarded for a respondent’s accomplishments were not to be reported.

Employed – This category includes all civilians 16 years old and over who either (1) were “at work,” that is, those who did any work at all during the reference week as paid employees, worked in their own business or profession, worked on their own farm, or worked 15 hours or more as unpaid workers on a family farm or in a family business; or (2) were “with a job but not at work,” that is, those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are people whose only activity consisted of work around the house or unpaid volunteer work for religious, charitable, and similar organizations; also excluded are all institutionalized people not inmates of institutions (penal, mental facilities, homes for the aged) and people on active duty in the United States Armed Forces.

Family—A family is a group of two people or more (one of whom is the householder) related by birth, marriage, or adoption and residing together; all such people (including related subfamily members) are considered as members of one family. Beginning with the 1980 Current Population Survey, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members. The number of families is equal to the number of family households, however, the count of family members differs from the count of family household members because family household members include any non-relatives living in the household.

Family Households – A family consists of a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householder’s family in tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families. A household can contain only one family for purposes of tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone – these are called nonfamily households. Families are classified by type as either a “married couple family” or “other family” according to the sex of the householder and the presence of relatives. The data on family type are based on answers to questions on sex and relationship that were asked of all people.

Female Householder, No Husband Present – A family with a female householder and no spouse of householder present.

A **household** consists of all the people who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live with any other persons in the structure and there is direct access from the outside or through a common hall.

A household includes the related family members and all the unrelated people, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated people sharing a housing unit such as partners or roomers, is also counted as a household. The count of households excludes group quarters. There are two major categories of households, “family” and “nonfamily”. (See definitions of Family household and Nonfamily household).

Health Insurance—A person was considered covered by **health insurance** at some time during the year if he or she was covered by at least one of the following types of coverages:

1. Employer/union

2. Privately purchased (not related to employment)
3. Medicare
4. Medicaid
5. Military health care (military, CHAMPVA, VA, Indian Health Services)
6. Someone outside the household
7. State Children's Health Insurance Program
8. Other

An individual can have more than one type of coverage during the year.

Definitions of the major types of health insurance coverage are available in the health insurance section http://www.census.gov/acs/www/Downloads/data_documentation/SubjectDefinitions/2013_ACSSubjectDefinitions.pdf.

Individuals for Whom Poverty Status is Determined – Poverty status was determined for all people except institutionalized people, people in military group quarters, people in college dormitories, and unrelated individuals under 15 years old. These groups were excluded from the numerator and denominator when calculating poverty rates.

Mean (average) income is the amount obtained by dividing the total aggregate income of a group by the number of units in that group. The means for households, families, and unrelated individuals are based on all households, families, and unrelated individuals, respectively. The means (averages) for people are based on people 15 years old and over with income.

Median income is the amount which divides the income distribution into two equal groups, half having incomes above the median, half having incomes below the median. The medians for households, families, and unrelated individuals are based on all households, families, and unrelated individuals, respectively. The medians for people are based on people 15 years old and over with income.

For each person in the sample 15 years old and over, the CPS asks questions on the amount of money income received in the preceding calendar year from each of the following sources:

1. Earnings
2. Unemployment compensation
3. Workers' compensation
4. Social security
5. Supplemental security income
6. Public assistance
7. Veterans' payments
8. Survivor benefits
9. Disability benefits
10. Pension or retirement income
11. Interest
12. Dividends
13. Rents, royalties, and estates and trusts
14. Educational assistance
15. Alimony
16. Child support
17. Financial assistance from outside of the household
18. Other income

It should be noted that although the income statistics refer to receipts during the preceding calendar year, the demographic characteristics, such as age, labor force status, and family or household composition, are as of the survey date. The income of the family/household does not include amounts received by people who were members during all or part of the income year if these people no longer resided in the family/household at the time of interview. However, the CPS collects income data for people who are current residents but did not reside in the household during the income year.

Data on consumer income collected in the CPS by the Census Bureau cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, social security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that some families receive part of their income in the form of noncash benefits, such as food stamps, health benefits, rent-free housing, and goods produced and consumed on the farm. In addition, money income does not reflect the fact that noncash benefits are also received by some nonfarm residents which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. Data users should consider these elements when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. Based on an analysis of independently derived income estimates, the Census Bureau determined that respondents report income earned from wages or salaries much better than other sources of income and that the reported wage and salary income is nearly equal to independent estimates of aggregate income.

For more information and the definitions of the source incomes, please refer to Appendix A, Definitions and Explanations, from the Current Population Reports, Consumer Income, P60-200 [PDF - 30K]
<http://www.census.gov/cps/files/Appendix%20A%20P60-200%20income%20measurement%20definition.pdf> .

Per capita income is the average income computed for every man, woman, and child in a particular group. The Census Bureau derived per capita income by dividing the total income of a particular group by the total population in that group (excluding patients or inmates in institutional quarters).

Poverty definition: Following the Office of Management and Budget's (OMB's) Directive 14, the Census Bureau uses a set of money income thresholds that vary by family size and composition to detect who is poor. If a family's total income is less than that family's threshold, then that family, and every individual in it, is considered poor. The poverty thresholds do not vary geographically, but they are updated annually for inflation with the Consumer Price Index (CPI-U). The official poverty definition counts money income before taxes and excludes capital gains and noncash benefits (such as public housing, Medicaid, and food stamps).

Poverty statistics are based on a definition developed by Mollie Orshansky of the Social Security Administration (SSA) in 1964¹ and revised in 1969 and 1981 by interagency committees. This definition was established as the official definition of poverty for statistical use in all Executive departments by the Bureau of the Budget (BoB) in 1969 (in Circular No. A-46); after BoB became The Office of Management and Budget, this was reconfirmed in Statistical Policy Directive No. 14.

The original poverty definition provided a range of income cutoffs or thresholds adjusted by such factors as family size, sex of the family head, number of children under 18 years old, and farm-nonfarm residence. At the core of this definition of poverty was the economy food plan, the least costly of four nutritionally adequate food plans designed by the Department of Agriculture. It was determined from the Department of Agriculture's 1955 Household Food Consumption Survey that families of three or more people spent approximately one-third of their after-tax money income on food; accordingly, poverty thresholds for families of three or more people were set at three times the cost of the economy food plan. Different procedures were used to calculate poverty thresholds for two-person families and people living alone in order to compensate for the relatively larger fixed expenses of these smaller units. For two-person families, the cost of the economy food plan was multiplied by a factor of 3.7 (also derived from the 1955 survey). For unrelated individuals (one-person units), no multiplier was used; poverty thresholds were instead calculated as a fixed proportion of the corresponding thresholds for two-person units. Annual updates of these SSA poverty thresholds were based on price changes of the items in the economy food plan.

As a result of deliberations of a Federal interagency committee in 1969, the following two modifications to the original SSA definition of poverty were adopted:

²

1. The SSA thresholds for nonfarm families were retained for the base year 1963, but annual adjustments in the levels were based on changes in the Consumer Price Index (CPI) rather than on changes in the cost of foods in the economy food plan.
2. The farm thresholds were raised from 70 to 85 percent of the corresponding nonfarm levels. The combined impact of these two modifications resulted in an increase in the tabulated totals for 1967 of 360,000 poor families and 1.6 million poor people.

In 1981, three additional modifications in the poverty definition recommended by another interagency committee were adopted for implementation in the March 1982 CPS as well as the 1980 census:

1. Elimination of separate thresholds for farm families.
2. Elimination (by averaging) of separate thresholds for female-householder families and "all other" families (earlier termed "male-headed" families).

3. Extension of the detailed poverty threshold matrix to make the largest family size category "nine people or more".

For further details, see the section, "Changes in the Definition of Poverty," in Current Population Reports, Series P-60, No. 133.

The poverty thresholds are increased each year by the same percentage as the annual average Consumer Price Index (CPI). The poverty thresholds are currently adjusted using the annual average CPI-U (1982-84 = 100). This base year has been used since 1988. From 1980 through 1987, the thresholds were adjusted using the CPI-U (1967 = 100). The CPI (1963 = 100) was used to adjust thresholds prior to 1980.

For further information on how the poverty thresholds were developed and subsequent changes in them, see Gordon M. Fisher, "The Development and History of the Poverty Thresholds," Social Security Bulletin, vol.55, no.4, Winter 1992, pp. 3-14.

Poverty statistics in American Community Survey (ACS) products adhere to the standards specified by the Office of Management and Budget in Statistical Policy Directive 14. The Census Bureau uses a set of dollar value thresholds that vary by family size and composition to determine who is in poverty. Further, poverty thresholds for people living alone or with nonrelatives (unrelated individuals) vary by age (under 65 years or 65 years and older). The poverty thresholds for two-person families also vary by the age of the householder. If a family's total income is less than the dollar value of the appropriate threshold, then that family and every individual in it are considered to be in poverty. Similarly, if an unrelated individual's total income is less than the appropriate threshold, then that individual is considered to be in poverty.

How the Census Bureau Determines Poverty Status

In determining the poverty status of families and unrelated individuals, the Census Bureau uses thresholds income cutoffs) arranged in a two-dimensional matrix. The matrix consists of family size (from one person to nine or more people) cross-classified by presence and number of family members under 18 years old (from no children present to eight or more children present). Unrelated individuals and two-person families are further differentiated by age of reference person (householder) (under 65 years old and 65 years old and over).

To determine a person's poverty status, one compares the person's total family income in the last 12 months with the poverty threshold appropriate for that person's family size and composition (see example below). If the total income of that person's family is less than the threshold appropriate for that family, then the person is considered "below the poverty level," together with every member of his or her family. If a person is not living with anyone related by birth, marriage, or adoption, then the person's own income is compared with his or her poverty threshold. The total number of people below the poverty level is the sum of people in families and the number of unrelated individuals with incomes in the last 12 months below the poverty threshold.

Since ACS is a continuous survey, people respond throughout the year. Because the income questions specify a period covering the last 12 months, the appropriate poverty thresholds are determined by multiplying the base-year poverty thresholds (1982) by the average of the monthly inflation factors for the 12 months preceding the data collection. See the table in Appendix A titled "Poverty Thresholds in 1982, by Size of Family and Number of Related Children Under 18 Years (Dollars)," for appropriate base thresholds. See the table "The 2013 Poverty Factors" in Appendix A for the appropriate adjustment based on interview month.

For example, consider a family of three with one child under 18 years of age, interviewed in July 2013 and reporting a total family income of \$14,000 for the last 12 months (July 2012 to June 2013). The base year (1982) threshold for such a family is \$7,765, while the average of the 12 inflation factors is 2.39719. Multiplying \$7,765 by 2.39719 determines the appropriate poverty threshold for this family type, which is \$18,614. Comparing the family's income of \$14,000 with the poverty threshold shows that the family and all people in the family are considered to have been in poverty. The only difference for determining poverty status for unrelated individuals is that the person's individual total income is compared with the threshold rather than the family's income.

¹ For a detailed discussion of the original SSA poverty thresholds, see Mollie Orshansky, *Counting the Poor: Another Look at the Poverty Profile*, Social Security Bulletin, vol. 28, no. 1, January 1965, pp. 3-29 (reprinted in Social Security Bulletin, vol. 51, no. 10, October 1988, pp. 25-51); and *Who's Who Among the Poor: A Demographic View of Poverty*, Social Security Bulletin, vol. 28, no. 7, July 1965, pp. 3-32.

² Poverty thresholds for 1959-1967 were recalculated on this basis, and revised poverty population figures for those years were tabulated using the revised thresholds. These revised 1959-1967 poverty population figures have been published in Census Bureau reports issued since August 1969 (including the present report). Because of this revision, poverty statistics from documents dated before August 1969 are not comparable with current poverty statistics.

Public assistance income: Public assistance income includes general assistance and Temporary Assistance to Needy Families (TANF). Separate payments received for hospital or other medical care (vendor payments) are excluded. This does not include Supplemental Security Income (SSI) or noncash benefits such as Food Stamps. The terms “public assistance income” and “cash public assistance” are used interchangeably in the 2012 ACS data products.

Retirement, survivor, or disability income: Retirement income includes: (1) retirement pensions and survivor benefits from a former employer; labor union; or federal, state, or local government; and the U.S. military; (2) disability income from companies or unions; federal, state, or local government; and the U.S. military; (3) periodic receipts from annuities and insurance; and (4) regular income from IRA and Keogh plans. This does not include Social Security income.

Social Security income: Social Security income includes Social Security pensions and survivor benefits, permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance, and railroad retirement insurance checks from the U.S. government. Medicare reimbursements are not included.

Supplemental Security Income (SSI): Supplemental Security Income (SSI) is a nationwide U.S. assistance program administered by the Social Security Administration that guarantees a minimum level of income for needy aged, blind, or disabled individuals. The Puerto Rico Community Survey questionnaire asks about the receipt of SSI; however, SSI is not a federally-administered program in Puerto Rico. Therefore, it is probably not being interpreted by most respondents in the same manner as SSI in the United States. The only way a resident of Puerto Rico could have appropriately reported SSI would have been if they lived in the United States at any time during the past 12-month reference period and received SSI.

Unemployed – All civilians 16 years old and over are classified as unemployed if they (1) were neither “at work” nor “with a job but not at work” during the reference week, and (2) were actively looking for work during the last 4 weeks, and (3) were available to start a job. Also included as unemployed are civilians who did not work at all during the reference week, were waiting to be called back to a job from which they had been laid off, and were available for work except for temporary illness. Examples of job seeking activities are:

- Registering at a public or private employment office
- Meeting with prospective employers
- Investigating possibilities for starting a professional practice or opening a business
- Placing or answering advertisements
- Writing letters of application
- Being on a union or professional register

Civilian Labor Force – Consists of people classified as employed or unemployed in accordance with the criteria described above.

Unemployment Rate – The unemployment rate represents the number of unemployed people as a percentage of the civilian labor force. For example, if the civilian labor force equals 100 people and 7 people are unemployed, then the unemployment rate would be 7 percent.

All people who were **not employed** during the reference week but were available for work (excluding temporary illness) and had made specific efforts to find employment some time during the 4-week period ending with the reference week are classified as unemployed. Individuals who were waiting to be recalled to a job from which they had been laid off need not have been looking for work to be classified as unemployed. People waiting to start a new job must have actively looked for a job within the last 4 weeks in order to be counted as unemployed. Otherwise, they are classified as not in the labor force.
